WORLD OF INDIAN FINANCE

January 4, 1935.

With the New Year there has been a welcome mitigation of the stringent money conditions which characterised the close of the old year. It is well-known that the turn of the year caused money rates in India to rise to very high levels, call money quoting at even over 4 per cent. To this development, doubtless, a variety of causes contributed. But the readjustments which banks effected for the purpose of the year-end closing and the other requirements of banking institutions at that time of the year had also a great deal to do with the squeeze for money; and it is only to be expected that, with the passing of the old year, the same stringency will not be experienced in the new. But if it is remembered that the requirements of banks formed only one of the causes of the stringency of the year-end, one will not expect a sharp change to easy money conditions. In the present position, one can say no more than that there has been a fall in the money rates since we wrote our last review of the money market in these columns.

For the comparative ease in the money market the sales and maturities of Treasury Bills during the last few weeks afford a fairly adequate explanation. As we pointed out in these columns formerly, sales of Treasury Bills during this fortnight have fallen far short of the maturities of Treasury Bills. There was no reason to expect otherwise. For, the only circumstance operating towards bigger sales of Treasuries was the slight increase in the tap rate which was effected in the last week of December. We pointed out that, as this period was one largely broken up by the holidays, and as the stringent money conditions continued, the Government would not be able to effect large sales of intermediates. As, on the other hand, the maturities during this period amounted to over Rs. 6 crores, there would be a considerable upset in the Ways and Means position of the Government. As a matter of fact, sales of intermediates between December 19 and 29 amounted to only Rs. 59 lakhs. Though this amount is inconsiderable compared with the heavy maturities of this period, it marks a significant increase over the Rs. 25 lakhs of the previous date. It might be supposed that the increase is a sign of the market's responsiveness to the increase in the tap rate from Rs. 1-5 per cent. to Rs. 1-6 per cent. If this reading is correct, one might expect further increase in the sales of Treasury Bills in the period following; for the the average rate of accepted tenders in the last auction came to Rs. 1-8-10 per cent. as against Rs. 1-7-9 per cent. in the middle of December and Rs. 1-7 per cent. in early December. As a result of the increase in the average rate, the tap rate has been put up to Rs. 1-7 per cent. Considering that the Government are offering a better inducement for investment in Treasuries, and considering also the fact that during this period the market has a net inflow from Treasuries of nearly Rs. 4 crores on account of excess of maturities over sales of Treasury Bills, one may look forward to better results in the tap sales during these days. As it is, it is very significant that the total amount of Treasury Bills outstanding has fallen so low as Rs. 26.85 crores against the recent high of Rs. 35.51 crores in early November. It is also significant that since that time Treasury Bills have never risen to the level of even Rs. 32 crores. One might wonder whether it is part of the official policy now to bring Treasury Bills to a lower level.

The Ways and Means position of the Government at present, however, is not helpful to such a reduction in the floating debt. For during the last two weeks the Government have increased their Ways and Means Advances from the Imperial Bank of India by Rs. 1 crore per week to Rs. 5 crores in the week ending December 28. This, our readers had been led to expect from our comments in previous issues. That such an increase has been caused largely by the commitments of the Government in regard to Treasury Bills, there can be no doubt. For nearly the whole of the maturities of Rs. 6 crores fell within

the period covered by the last statement of the Imperial Bank. Compared to the amounts which the Government have had to pay out on account of Treasury Bills the increase in the Ways and Means Advances is indeed very slight. This points to the possibility that the Government have already begun to realise some surplus on account of the incomings and outgoings. But even then, the maturities of Treasury Bills during January amount to as much as Rs. 9,46 lakhs, which are not evenly spread over the four weeks of the month. For between January 12 and 27 there are hardly any maturities of Bills. The pressure will therefore be unevenly felt. As there are no large maturities on January 3 and 4 the statement of the Imperial Bank of India for the week ended Thursday last will show only the effects of the requirements of the early month. But whether in the second week of January sales of Treasury Bills will amount to the maturities during that period, not to speak of making up for the excess of maturities over sales during the previous period, is more than one can say at present.

Government securities have remained steady over the holidays with 3½ per cent. paper quoting Rs. 98/2. At this figure Bombay is reported to have sold large amounts to the tune of about Rs. 75 lakhs during the days when the Stock Exchanges were officially closed. But Calcutta has shown a capacity to absorb all this inrush of scrips from the Western City. It is believed that in the changes which have occurred during this period of hectic rise and large-scale sales by banks, scrips have again passed into the hands of speculators. One might expect from this considerable activity of both a bearish and bullish kind in the Government Securities market. As speculators have only recently, according to this belief, extricated themselves from a position of extreme dependence on investors for scrips, it is doubtful whether the extent to which speculators have regained control of scrips has not been to some extent exaggerated. Nevertheless, an increase of activity of both a bearish and bullish kind in the Government Securities market. As speculators have only recently, according to this belief, extricated themselves from a position of extreme dependence on investors for scrips, it is doubtful whether the extent to which speculators have regained control of scrips has not been to some extent exaggerated. Nevertheless, an increase of activity consequent on the passing of scrips into the hands of speculators need not be expected as a immediate result thereof. For even if speculators have got control of a considerable volume of scrips there are at present no factors or forces causing any brisk movement. Money conditions still continue to be tight, banks quoting from 2 to 3 per cent. for call money. While the view that 3½ per cent. is bound for par and that the Government might not inconceivably attempt to reap the benefits of the higher rise in giltedge prices gains all-round acceptance, the psychological adaptation to the higher levels gained recently is not yet altogether complete. There is still a trace of that hesitancy which regards certain levels of prices as too good to be true. It would otherwise be difficult to explain the Indian giltedge market, placed as it is, relapsing into its old habit of taking its cue from London. In fact, the Indian market has done this during the week under review. But for the rise in India sterling securities the improvement, which has occurred in 3½ per cent. paper, would not have come about. 3½ per cent. paper which was quoted at Rs. 98-14 during the week has had a setback to Rs. 98-9 which shows that the consolidation of the ground won in recent times has not been completed.

Even lower levels have been quoted at the end of Friday's trading and the fall in the face of the position in London has evoked a somewhat bearish outlook. This feeling of bearishness amongst operators is not altogether without reason. The most significant development of the last two, three weeks is the change from an absolute lack to more or less plenitude of scrips. The banks have unloaded a great deal of Government securities from their *port folios*. In this context it is necessary to point out the very large fall in the Imperial Bank's holdings of Government Securities as witnessed in the weekly statements of the Bank. In the last statement Government Securities stand at Rs. 41.17 crores. As against this, the Bank's holdings of Government securities on November 2 last, was to the tune of Rs. 49.71 crores. The sale of over Rs. 8½ crores of securities by the Imperial Bank should of itself have wrought a great change in the position. But other banking institutions have also joined in this movement; and the result is seen to-day in the ready availability of scrips. If it is true that the rise in the early part of December was due largely to the scarcity of scrips, then the excess of scrips to-day should naturally act in the opposite direction.

While this is a factor of little popular significance, there are others like the continuance of tight money and the increase that has occurred during the last two weeks in the yield on Government's short-term bills. We have always held the view that there is a close relation between the rates at which the Government are able to secure their short-term accommodation and the prices at which their long-term securities sell in the market. There is no doubt that the spectacle of rising yields on Treasury Bills acts as a wet blanket on the giltedge market. But there is no reason to suppose that the upward trend of Treasury Bills rates would go on or that it would reach a point at which it will be the rival to Government Securities as an avenue of investment. Nor need tight money conditions interfere seriously with the stability of giltedge prices. Though, they are doubtless, a potent factor in arresting the upward course of giltedge they are still not sufficiently power-

(Continued on page 23)

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

Thursday evening.

The fortnight that has passed since these columns were last written is on the whole an eventless, but far from uninteresting, period. The New Year has ushered in a new phase of the international monetary and exchange position. Sterling has on the whole remained free from unsettlement. There is evidence, it is true, of some weakening towards the close of the year owing to the strengthening of the dollar and the franc and the consequent need of the Control to interfere and sell francs. But the position of sterling is not such as to raise any immediate problem or such as to disturb the generally complacent outlook of the British Chancellor of the Exchequer. The recent speech of the Chancellor of the Exchequer on the motion for adjourning Parliament for the Christmas recess, bears ample testimony to his confidence that, amid all the uncertainties and upsets of the times, Britain has managed to evolve a monetary and exchange policy which not only meets the domestic requirements, but also keeps the position open for a satisfactory international agreement, as and when conditions are ripe for it. The Chancellor of the Exchequer assured the country, and the outside world too, that the official policy continues to be one of ensuring cheap money and the stability, within limits, of sterling.

It may be noted in passing that this official announcement regarding monetary policy marks a significant change from the traditional British idea of the autonomy of the Bank of England in the sphere of money and exchange. The conditions, which reigned during the last few years and the necessity for official intervention have resulted in the establishment of a full-fledged official control over the money and exchange policy. For all practical purposes, the Bank of England has come to be subordinate to the treasury and the only freedom it enjoys is in respect of the routine business. These developments may be said to have robbed the extremist proposals of nationalising the Bank of England of all practical import. Nevertheless, Mr. Lloyd George has joined the ranks of those who believe in the nationalisation of the Bank of England, the objective of which is the freer utilisation of the resources of the Central Banking Institution for the purpose of financing industrial reorganisation, especially, those schemes which cannot be expected to recommend themselves to orthodox central banking. In this context, it is only necessary to note that the traditional antagonism and conflict between the Treasury and the Bank have been smoothened a great deal and that, in the future, it would be even easier than in the depression years for the Treasury to alter its policy in the light of changing circumstances. Thus, so far as Britain is concerned, she has not only evolved a policy which is best suited to the circumstances, but she has also effected the constitutional changs which will enable the Treasury to act promptly, as soon as objective conditions and their own judgment enable them to reach definite decisions.

The feature of international finance to-day is that, while Britain is thus favourably placed, all the other nations have their problems. In America, vital questions of monetary and exchange policy are still in the formative stage. The larger issues of the N.R.A. are not only unsettled but they have not even been clearly formulated. In the sphere of money and exchange further devaluation to the statutory limits of 60 cents. is not yet out of the question. The new Congress, known to be wildly inflationist, would need a solid improvement in the economic conditions to dissuade it from the more extreme inflationary course. For the present, America has to contend with the problem of a strong dollar. The silver policy, which was a handy instrument for placating political groups within the country and weakening the dollar abroad is no longer as handy or as effective. The Chinese opposition to the American methods of raising the price of silver has brought even the far eastern country among the votaries of devaluation. The obstacles which China has interposed in the way of America's purchase of silver have been very effective, indeed. Though America has her problems, it might be said of her, as of Britain, that she has no immediate worries and can well afford to watch the course of events.

But the same cannot be said of the European gold currencies. A fortnight ago, we examined in detail the position of the lira and pointed out that, however much the authorities may try to bolster up the currency, devaluation would not only be the best way out, but would also be ultimately inevitable. Since then, authentic statements have been made in the Italian Press denouncing the idea of devaluation and affirming the determination of th authorities to maintain the lira. This is only one of the many announcements which the Gold Standard countries frequently make, partly with a view to discourage bear raids and partly with a view to reassure those sections in the country which are interested in the maintenance of the present parity. It is notorious that such statements have not served to dispel the fears of devaluation. But what marks the Italian declaration from other announcements is the disavowal of all intention of further deflation of currency. It is a truism that the only way of over-valued currencies restoring equilibrium without devaluation, is to deflate currency within the country. The Italian statement, therefore, is highly incongruous. The only way of eliminating the incongruity is to suppose that either Italy has made up her mind to bring about a system of controls like that in Germany or she expects a natural restoration of equilibrium of prices by a rise in the world level of prices. On no other basis can one explain away the conflict between disavowal of deflation and determination to maintain the present parity.

A writer in the *Financial News* aptly points out that both these alternatives are highly impracticable. The experience of Germany is very conclusive against imitation of her example. For such system of controls involves what amounts to subsidising the exports and a rise in the prices of imports which means particularly severe hardship to the working classes. The maladjustments in Germany's economy consequent on the elaborate system which she has brought into being on account of her desire to maintain the gold currency or to camouflage the depreciation which she has brought about, can hardly be said to encourage Italy to follow in her wake. As for a rise in the general levels of prices in the world, it is difficult to see how the authorities in Italy expect such a consummation to be brought about. If present tendencies are a clue, the rise has come about rather in the primary products than in manufactures ; and it is in the latter that Italy is interested. For, without a rise in the price of manufactures the competitive power of her export industries would be unaffected; while a rise in the price of raw materials would further reduce her balance of trade.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Wednesday, January 2. The total amount offered was Rs. 2 crores. Tenders at Rs. 99-10-0 were accepted in full and those at Rs. 99-9-9 were allotted approximately 71 per cent.. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-8-10 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Wednesday, January 9. Successful tenders should make payment on Friday, January 11. Other conditions are as usual.

Three months' intermediates will be sold from January 3 to 8 at Rs. 99-10-3 per cent. subject to the conditions previously announced.

Three months' intermediates sold from December 19 to 29 amounted to Rs. 59 lakhs.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, January 2, tenders to the amount of £45,550,000 at 1s. 6 1/16d. were received and allotted approximately 2.2 per cent.

£1,000,000 will be offered for tender on Wednesday, January 9 on the same conditions as previously announced.

THE NEW YEAR'S HOPES

At the dawn of the New Year mankind indulges, almost by habit, in a new optimism. This might seem irrational, considering the experience of history, which shows but the loosest connection between the calendar and the fortunes of men. The centuries do not mark the epochs ; nor does each decade show a different phase in the affairs of individuals or communities. Even astrologically human fortunes are changed for better or for worse by the movements of the planets, which are not quite in accord with that of the Sun. Thus the belief that the turn of the year is a turn in the fortunes of men has little warrant in reason. But it is deep-rooted in human instinct. After all, let it not be forgotten that mankind lives less in hope than in fear. The normal attitude is one of fear as to what the future has in its womb. And hope itself is only a form of fear, inverted fear perhaps. In the harrowing days of the depression, those who dared to indulge in hope as an escape from the fear of worse, were punished with bitter disappointment. Then came the time of the misanthropes, who foretold the worst and whose fears were subsequently falsified. There are now, it must be said, more equanimity and a better sense of realism. We are no longer preys to unreasoning fear. Nor would we expose ourselves to the dangers of disappointment by indulging in extravagant anticipation.

* * *

As each year rolls by, mankind gathers greater knowledge of the problems that lie before it; and even if it does not know how best to tackle them, it has learned the dangers alike of overestimating and underrating the difficulties. In politics, the post-war years were a period of easy optimism among the people, and hard cynicism among the rulers. But the popular spirit infected one and all. Problems, which mankind might, conceivably, leave unsolved for centuries, were attacked with thoughtless impetuosity ; and the inevitable failure has brought about a reaction too strong for any one to stem. The breakdown of the Disarmament Conference results in a hectic increase of armaments all over the world. Popular psychology has swung to the other extreme. Far from there being an eagerness to abolish active hostility, there is a proneness to regard the next war as not only inevitable, but even too near. In this change, each Government sees a sanction for preparation for war ; and the world is set on an inclined plane leading to another catastrophe. But those, who have sincerely striven for world peace, have gained a great deal in experience ; and one may be sure that the Disarmament Conferences of the future will not be taken at their face value.

* * *

The dangers of easy and ingenuous optimism are also being progressively eliminated from the economic sphere. Our problems are crystallised in the depression, which, threatens, though not to deepen, at least to stay with us for some long time. Though, in a sense, the depression, as a cyclic phase of business, has gone, we are still far from having had a complete understanding of it. Time was when the best informed among us thought that the depression was but self-curative and must go even as it came. When the deadlocks became more apparent and the consciousness grew that there were no keys thereto, optimism yielded place to despair. In less than three years the depression deepened into a crisis ; and it was not till the breakdown wrought a measure of inevitable reconstruction that mankind again dared to hope that the worst of the depression was over. But that complete understanding of the true nature of our problems was still far off. Else no one would have thought that the improvement in prices, which occurred in the autumn of 1932, would lead the world back to the heights of prosperity. Nor would the World Economic Conference have met with that fanfire which anybody, who had an inkling of its inglorious end, would have recognised to be ridiculous in the extreme. The failure of the Conference has as the event has proved, and as we foresaw at the time, been the signal for every country to plunge into purely national programmes. This is hardly the place to examine in deatil these programmes. But if the one year, that followed the close of the Conference, was a year of national programmes, one would think that it is already time for a mild reaction, turning men's minds again towards the need for international understanding on matters in which it is possible to secure it. There are signs that the nations recognise the folly of neglecting the world outside. But there is no assurance yet that they find the antidote to excessive nationalism, in regarding the world as the most natural economic unit and not in fishing out for economic allies. The policy of bilateral trade pacts is the translation of nationalistic diplomacy into the sphere of economy. And one may be sure that the results would be as disastrous as in politics.

* * *

The best development of 1935, which one can hope for, is a growing synthesis of the various views of the causes and cures of the economic depression. In the last few years the world has, indeed, moved from over-simplified theories of the depression. It has shaken off its faith in simple remedies. It has awakened to the inadequacy of each measure proposed and the diversity of conditions and aspirations in the various countries of the world. There is a greater tolerance than ever before of the measures which individual nations have adopted under the stress of necessity. If a second World Economic Conference meets—and it would still be too premature—it would witness far more of mutual sympathy among the nations than its predecessor. In that lies the hope of recovery and reconstruction. And may the New Year prove that the common suffering of the last few years has drawn the nations closer round the common task!

THE OLD YEAR

Though on account of the experiences of previous years, no one had any high hopes of the year, 1934 has proved to be a year of general and all round improvement We have already pointed out in an earlier article that business sentiment is optimistic without losing touch with realism. So far as India is concerned, there are still certain weak spots which call for early, if not immediate, attention on pain of grave consequences. But if one looks to the general health of the economic system one cannot fail to be struck with the improvement that has come about during 1934. The developments of the year cannot be understood except in reference to the earlier years. It is well-known that the first signs of recovery from the depths of depression were visible in the Autumn of 1932. In the state of imperfect knowledge that then obtained, there were many

who thought that from then it was a smooth and steep run to the heights of prosperity of the pre-Depression years. Though the setback occurred in the winter and summer of 1933, not all the gains of 1932 were lost and the latter half of 1933 saw a general consolidation of the improved position of world economy and trade.

* * *

Of 1934, it may be said that it has more than kept up the pace of progress. Thanks to the timely drought in America and in India, agricultural prices have shown an appreciable improvement and have provided the basic conditions in which alone a recovery of trade and industry is possible. The various industries in India like the cotton textile industry, the sugar industry, iron and steel and jute have all found it possible to consider their position and outlook and understand the nature of their problems and the manner in which the solution has to be attempted. The Government of India have realised in a considerable measure the benefits of that strenuous programme of financial reconstruction on which they began in the dark days of 1931. It is now widely believed that when the budget for 1934-35 comes to be presented to the Legislative Assembly in February next, the finances of the Government of India will appear in a much more favourable light than in the earlier years of the depression, and that there might be even a goodly surplus. As for the railways, the railway earnings have shown a marked improvement during the year ; and this is a matter for gratification not only in consideration of the fact that the incidence of the Railway Budget is ultimately on the taxpayer in India, but also because it reflects the general improvement in the trade and industry of the country. The result of the improvement in the financial position of the Government has naturally been reflected in the giant strides which the Government's credit has taken during this period and the impressive advance in prices of Government securities. The Government have, naturally, endeavoured to reap the advantages of such an improvement in their credit by issuing in the middle of September a 3 per cent 1941 loan partly for cash and partly for conversion. The extent of the progress in the Government's credit may be imagined from the fact that of late it is widely believed that the Government would even take on hand the apparently formidable task of converting the irredeemable 3½ per cent. Paper to a basis of 3 per cent. or even under. In such a position it need hardly be said that the ways and means of the Government have not offered any difficulties and that the rate paid by the Government on their short-term accommodation has been very low compared to former years. On account of the improvement in the foreign trade, the rupee rate has maintained itself at a steady level and Government have experienced no difficulty in securing their requirements of sterling for the purpose of remittance to the Secretary of State.

Such, in brief, is the general outlook of India's finance and trade in 1934. It is necessary to review the foreign trade position as holding the key to the general financial and economic position of the country. There can be no mistaking the improvement in India's foreign trade. Both exports and imports have shown during the first ten months of 1934 a marked improvement over 1933. The total exports of Indian merchandise during the eleven months increased from 119.64 lakhs to 124.27 lakhs. Likewise, imports have risen from 96.60 to 104.38. It is sometimes believed that the import trade, as a result of the trade agreements with Britain and the Empire countries and Japan has improved much more than the exports. It is, therefore, necessary to note that while exports at 124.27 lakhs is well over the level of 1933, imports are still lagging behind 1933. From the standpoint of trade, the improvement in exports and imports may be considered equally gratifying. But, it must be said that the visible balance of trade in merchandise has not regained the level of the worst years of the depression, namely, 1932. The balance of trade and merchandise during the first ten months of 1934 amounted to 22.41 lakhs against 25.75 lakhs in 1933 and .69 lakhs in 1932. There is thus still need for gold exports continuing to take their place in India's balance of trade. Private exports of gold in the ten months ended October last came to 48.33 crores against 45.37 crores last year and 57.88 crores in 1932.

* * * *

It is important that during these years the exports of silver have also come to increase the visible balance of trade in favour of India. It is well-known that as a result of the depression, India has changed her place in world finance from one of an importer of the precious metals in large quantities to a net exporter of gold and silver in impressive amounts. Thanks to the silver policy of Mr. Roosevelt in America, the Indian hoarder is now having the same tempting offers for his hoards of gold as he has been experiencing for gold all these years. And the general economic situation in the country has not improved to the extent that the Indian masses are no longer under the necessity of parting with their hoards. During the ten month period referred to there were net exports of silver to the value of 135 lakhs, against 4 lakhs in 1933 and a net import of 53 lakhs in 1932. As a result of this change the total balance of transactions in treasury may be computed in this ten month period at 49.64 crores against 45.54 crores in 1933 and 57.46 crores in 1932. The total visible balance of trade thus shows an increase from 71.29 crores in 1933 to 72.05 crores in 1934, a very considerable improvement over the 58.15 crores of 1932. With such a position in the foreign trade and in the exports of the precious metal it is not to be wondered that the Rupee rate has remained steady throughout the year. There was hardly any stage at which the exchange called for the special attentions of

the Government ; and this is no small gain considering the frantic efforts that Government had to make in 1931 to prop up exchange by means of a drastic inflation and by the most annoying interference in the money market. The rate at which the Government have been able to buy sterling has shown no change during the last six months, though the amounts which they have been able to purchase in the open market have varied from month to month. The market's offer of sterling to Government is determined by the remittance enquiry and by the needs of the exchange banks for cash. It is doubtful if the changes in the monthly purchase of sterling by the Government reflect changes in the intrinsic position of the Rupee. It speaks volumes for the strength of the Rupee rate that in the eleven months ended November the Government have been able to buy from the open market as much as £42 million for remittance to the Secretary of State, the bulk of which was bought at the rate of 1s. 6.045d. The total remittances to the Secretary of State may be said to be Rs. 15.59 crores in favour of India.

* * *

As observed already, the credit of the Government of India has improved remarkably during this period, especially in the latter half of 1934. At the beginning of the year, 3½ per cent. paper was quoted at only Rs. 88-8 and to-day it is well over Rs. 98. To concentrate only on the latter half of 1934, the most important development is the issue of a 3 per cent. 1941 loan for which subscriptions were invited in the form of cash and in the form of 4 per cent. 1934 bonds. The New Loan was not as much of a success as one might expect it to be, from the conditions of the time of the issue or from the developments in the giltedge market since. The total realisation came to only Rs. 10.65 crores ; and as a conversion, it was a failure. For the tender of 4½ per cent. 1934 bonds was only Rs. 2.06 crores as against the total outstandings of Rs. 8½ crores. The market, as a matter of fact, expected the loan to amount to Rs. 12 crores and the general verdict would have been that the loan was a failure, but that it was known and widely recognised, too, that the Government's requirements were not over Rs. 10 crores and that the comparative failure of the loan involved no embarrassment for them. But it is significant that those holders of 1934 bonds, who shied at the 3 per cent. 1941 loan at its issue price of Rs. 99, had after the eventual repayment to take up the same scrip at the much higher market price. In fact, it is this turn of the tide against the recalcitrant converters that demonstrated in a more convincing manner the strength of Indian giltedge. Hardly any month passed without a substantial improvement in the price of 3½ per cent. paper. The most significant development of the year-end is that the Indian giltedge market has freed itself from the leading strings of the London market. Throughout the years of the depression Indian Rupee securities have been content to lag far behind the level of the Government of India's sterling securities. The Indian market has every time taken the cue from London, and there is no reason whatsoever why the Rupee securities should give a higher yield at current market price than the sterling securities of the same Government. The phenomenon persisted till a late stage and only in the first half of December 1934 the 3½ per cent. rupee and sterling paper came to the same level at a price of about Rs. 96. Thereafter the Rupee scrips have been keeping ahead of the sterling scrips. Although to-day the state of the London giltedge market has its relevance, giltedge in India is no longer dependent on the movements in London.

* * *

The rise in giltedge prices naturally suggests that money conditions have been easy and that trade has been dull. There is no doubt that we are still far from a vigorous trade activity. It will be sometime before the trade demand will cut into the funds that are now seeking investment in giltedge and in ordinary shares. But it will be a mistake to overlook the improvement in the general outlook. A review of the position of the principal commidities may be useful in this context. So far as cotton is concerned, the outlook has vastly improved, consequent on the policy of Mr. Roosevelt in America and the fact of the American crop being below normal. So far as India is concerned, she has derived the advantages of the price movement initiated by America and the opening up of a large market in Japan on the conclusion of the Indo-Japanese trade agreements and the lifting of Japan's ban on India's cotton. Jute was, till recently, the despair of Bengal though, in consideration of its monopolistic character in this province of Bengal though, in consideration of its monopolistic character in this province and its being a necessity of world trade, it should have been the lodestar of Bengal's hopes. Fortunately, the Bengal Government's determination to bring about a restriction of the jute crop has wrought a very welcome change. When the scheme of restriction was first announced, public opinion was disappointed that it was to be on a purely voluntary basis and was not prepared to believe that voluntary restriction could be successful. But latterly the energy with which the Government have been pursuing their propaganda has dispelled scepticism in the public and particularly in the markets. The whole jute market is feeling a new animation ; and the foreign consuming markets have also taken note of the imminence of successful crop restriction in India and are, therefore, increasing their offtake. The exact percentage of restriction is still being considered by the Government, and much would depend on the final recommendation of the Government to the cold waters. The other principal agricultural commodities like rice, oilseeds have also put on appreciable rises, thanks to the threat of widespread drought in South India. And though the drought has not proved to be quite severe, not all gains made during that time have since been lost. It seems certain, judging from all accounts, that the agricultural staples in India will command a higher price. As for the industries the general outlook may be judged from the boomlet that has been going on in

the principal stock exchanges of India for the last two or three months. It might be thought that the increase in the price of shares is due solely to the easy money conditions and that it is not a reliable index of the outlook of industrial concerns. Such a view can be disproved only by an examination in detail of the position and prospects of each industry. But in so far as the general sentiment counts in the prospects of industries, it may be said that there is one valuable advantage now which we lacked in earlier years. The Indian iron and steel industry has been virtually struck off the list of protected industries. But if the quotations in the stock Exchange are any where, it appears certain that the industry will prove equal to the foreign competition and that its contribution to the national wealth will be even more than in the past. The cotton textile industry has, it is well-known, been going forward with a programme of a much larger output than in the earlier years. Bombay has been working double shift, and although production has been known to be more than the offtake, there has been no disquieting effect on prices. It is yet too early to say whether the consumptive capacity of the country has increased ; but there is reason for hope that the consumption of cotton goods will be on the increase in the coming months.

* * *

The Sugar Industry has lately had a new problem in the shape of the fall in the price of imports from Java. It has, as we pointed out some time ago, applied to the Government of India for an increase in the import duty with a view to maintain the margin of protection at the level contemplated by the Tariff Board. It is obvious that with such increase in the import duty, the position of the home industry would be greatly strengthened and stabilised. For if such increase in duties were granted, it would operate at a time when by all tokens, the Sugar Industry will also have brought into effect a scheme of rational marketing of sugar. At the moment, we are concerned with the general outlook; and there is indeed no reason why sugar should be regarded as a black spot in an otherwise bright landscape. Taken all in all, 1934 is not a year of regrets. It has given mankind more than it dared to hope for. And more than its specific rewards the important point is the confidence which it has induced in people that every thoughtful effort Government and people might take in 1935 will not be a case of sowing on barren soil.

HOUSING INDIA

The housing problem, with the increasing urban population of India, has not been seriously considered, though its importance in any scheme of national economic planning is obvious. A valuable report on "Housing England," issued by the group known as Political and Economic Planning (16, Queen's Gate S.W.1, 5 Shillings net) deals with the essentially economic question of the proper housing of the population at the lowest possible cost to the Exchequer. The Report presents a complete statistical analysis of every phase of the housing problem and would amply repay a careful study by Indian Municipalities and local authorities.

* * *

The Report states that there are three distinct, but inter-dependent, aspects of the housing problem. The first is the housing problem proper, a problem of brick and mortar—that is, how many houses are needed to house workers at a satisfactory standard. The second is a rent problem—that is, how workers' housing is to be made economically self-supporting. And the third is that of "rent-paying, which is strictly not poverty." The Report makes it clear that unrelated slum clearance, private enterprise and assisted municipal building are in themselves, jointly or singly, not enough, because they are not economically sound. It is possible, the Report points out, for local authorities to remedy over-crowding by building workers' houses on substantial subsidies which must ultimately prove uneconomic. In proper organisation and nationalisation of the entire process of housing and building, the cost and the time could, the Report suggests, be enormously reduced.

* * *

This feature of the Report is of great interest to India, where the problem is more acute than in the United Kingdom. A notable point, the Report makes, is the extent to which local rates are a cost or rather a tax on working class housing. Every man, unemployed or employed, pays rates, generally compounded in England in his rent. A rate of 10 shillings in the pound on a house of a rateable value of £13 means an addition of 2 shillings 6 pence a week to the rent. In other words, the rent which a lower-paid worker can afford to pay is reduced from, say, 11 shillings to 8 shillings 6 pence—a substantial saving to him. We quote the passage in the Report elucidating this point:—"Two to three shillings per week is probably, the most frequent figure (for rates paid by workers) and this means a tax from 3 to 7½ per cent. of income for a family living on, say, 40s. to 60s. a week. In extreme cases the percentage may be well over 10 per cent. The general effect of rates may go largely to the support of social services, which are predominantly for the benefit of lower-paid workers. A complete overhaul of rates is no doubt desirable, but obviously nothing so large is likely to be undertaken for many years. . . . The fact that piecemeal action is perfectly feasible is shown by the derating of agriculture (wholly) and of industry and freight transport (partly) achieved through the Local Government Act, 1929, and other measures. If special relief can be arranged for 'deserving' industries (including

brewing) surely special relief can be arranged for 'deserving' people."

* * *

The interest on capital which the rent-payer bears is, according to the Report, excessive. The Report suggests that a private organisation might, with Government "goodwill," raise capital for housing at 3½ per cent. This organisation would be bi-lateral—a building company and a housing company: the first to build houses and the second to plan, own and manage them. These companies would compete with ordinary private enterprise and operate on a profit-earning basis.

* * *

Economic, social and legislative conditions are so different in India that it is difficult to envisage a near future when, in so far as they are adaptable, the constructive suggestions in the Report can be applied to this country. Unfortunately, the low standard of living of the workman in India is responsible for much of his economic duress, unhealthy housing among them. Slum clearance in Bombay and Calcutta has been attempted as a civic welfare measure within the very limited means available: but isolated action of that sort barely touches the fringe of the problem. The Corporation of Calcutta put up, some years ago, blocks for housing the poor, at rents which are, we believe, economic. The city landlord's point of view is that rents are so insecure and municipal rates so high that house property which does not yield 6 per cent. is unremunerative. That is not a convincing statement, in view of the recent phenomenal increase of residential houses in Calcutta. The rapidly rising value of land more than compensates landlords against loss of rent, repairs and rates. Building societies who build houses on easy terms of acquirement by the rent payer have not been popular, chiefly because the initial security demanded is beyond the means of the working lower middle class. A co-operative organisation, sponsored by Government, might lead to a slow solution of our urban housing problem by attracting capital for a twenty-five years' building scheme.

GOVERNMENT AND JUTE RESTRICTION

We understand that the decision of the Government of Bengal regarding the extent of restriction that is to be effected by jute growers for the 1935 crop is to be announced very soon. For sometime past there have been disquieting rumours in the market that the mill interests are making strenuous efforts to influence the decision in favour of a very small reduction. We do not know what the decision of the Governor is going to be, but we feel sure about one thing. His Excellency Sir John Anderson during the tenure of his office as Governor of this province has shown in an unmistakable manner that he is the last person in this world to be influenced by any sectional interests. He has made up his mind to improve the economic condition of Bengal which, as he remarked at Tangail, is synonymous with the price realised for jute. The primary consideration, which will weigh with the Governor, will be whether the percentage of restriction, which the cultivators will be asked to effect, will be sufficient to raise the price of jute. According to our information, the jute-consuming interests are reported to have suggested a 12½ per cent. reduction in the next crop as compared to the 1934 outturn. We can unhesitatingly say that this figure will be grossly inadequate. Even if the cultivators scrupulously carry out the amount of restriction that they will be advised to do, a thing which is extremely improbable as was pointed by Mr. H. P. Bagaria in an article published by us sometime back—it will fail to raise the price of jute.

* * *

It has been estimated that the total carry-over of jute at the end of the present season will not be less than 90 lakhs of bales. Efforts are being made to dispute the accuracy of these figures. We admit that, with the exception of the stock carried by members of the Indian Jute Mills Association, all other figures relating to stocks are only estimates. But in the absence of definite figures, the trade has accustomed itself to rely on certain figures published by some well-known jute firms. These figures have always been taken as the basis of calculations regarding supply and demand.

* * *

There may be some difference of opinion rgarding the stocks left in the hands of people upcountry and the foreign consumers of jute. But so far as the stocks in the hands of jute mills in India and the dealers in Calcutta are concerned, we have the figures published by the Indian Jute Mills Association and the estimates arrived at by certain well-known firms. At the end of June, 1933, the mills had a carry-over of 44¼ lacs bales. According to the report issued by Messrs. Landale and Clarke, the biggest jute importing firm, the stock in the hands of jute dealers on the same date was 10 lacs bales. In their report for the period ending November, 1934, the total imports of jute in Calcutta are shown at 49¼ lac bales or 3 lac more than last year while exports are about 2½ lac bales less. As a result of this the stock in the hands of Calcutta dealers has gone up by 5 lacs bales. Judging from the rate of imports, the 1934 crop is certainly not less than the 1933 crop. Assuming that there is no change in the stock position of the foreign mills and in the moffusil, the total stock in the hands of mills and Calcutta dealers by the end of the present season will be about 60 lacs bales. Admitting for argument's sake, that there is no room for any reduction in the stock carried by foreign consumers and people in the moffusil, we submit that even in the two items mentioned before there is room for a reduction of about 30 lacs bales. The highest estimate of the total consumption by mills is 48 lacs of bales. A stock representing six months' requirements should be quite sufficient. The stock carried by the mills once came down as low

as 16 lacs of bales. A stock bigger than six months' consumption puts the mills in a position of being able to dictate their prices for the raw material. The stock in the hands of dealers, too, is exceptionally large. Till a few years ago the normal stock in Calcutta used to be about 5 lacs of bales. It will be seen that there is room for a reduction of 30 lacs bales even if we leave out of consideration the stocks in the hands of foreign mills and the muffusil stocks, about which no definite figures or any reliable estimate is available.

* * *

It has been suggested that the Government should aim at restriction by stages and should not carry out the entire cut in one year. They should aim at 15 per cent. reduction this year and if they succeed further efforts should be made next year. The Government can hardly under-rate the dangers of such a policy. If they advise the cultivators to carry out a very small percentage of restriction it is more probable the presence of large stocks would prevent a rise in prices and cause the public of Bengal to lose all its enthusiasm for restriction.

* * *

There is another very strong reason why the Government of Bengal should not advise the cultivators to restrict their sowings by anything less than thirty per cent. As a result of the confidence created by the announcement of the Government regarding the next crop the price of jute has gone up by about Rs. 8 per bale an improvement of 33 per cent. over the lowest. When the price was at a lower figure there were more chances of the cultivators carrying out fully the instructions issued to them by Government officials. But in view of the rise in price that has already taken place and the prospect of further improvement due to restriction, there is every possibility of some evasion. Because, after all, there is no power in the hands of special officers to compel the cultivators to carry out their instructions in an exact manner. There will be concentrated propaganda; but no amount of propaganda can guarantee a 100 per cent. success. If the Bengal Government listen to the advice of mill interests there will be no margin for evasion.

(*Continued from page 2*)

ful to pull them down below the existing level. Thus though we concede that there is reason for a tinge of bearishness in the giltedge outlook, anticipations of a serious setback are unwarranted. It is significant that a similar bearisheness is not noticeable in the reports from Bombay. In that centre, 3½ per cent. paper has touched as high as Rs. 98-14 and Bombay would seem to be firm in the view that 3½ per cent. is bound for par. There is no evidence of an overbought position ; and what is more, though the rumours of a 2½ per cent. loan, which have been current in the markets this week, are manifestly premature, there is no reason to rule out the chances of Government taking such a move as and when conditions are favourable to it.

Exchange was steady due to steady money conditions. Banks were sellers of T.T. at 1s. 6 1/16d., for January, 1s. 6 1/64d., February-March and 1s. 6 1/32d., April-June.

Three months Bills quoted 1s. 6 5/32d., for ready and near positions and 1s. 6 1/8d., till June 2.

Money was in fair demand with interbank call money quoting roundabout 3½ per cent.

On January 2, tenders to the amount of £45,550,000 at 1s. 6 1/16d., were received and allotted approximately 2.2 per cent. £1 million will be offered for tender on January 9.

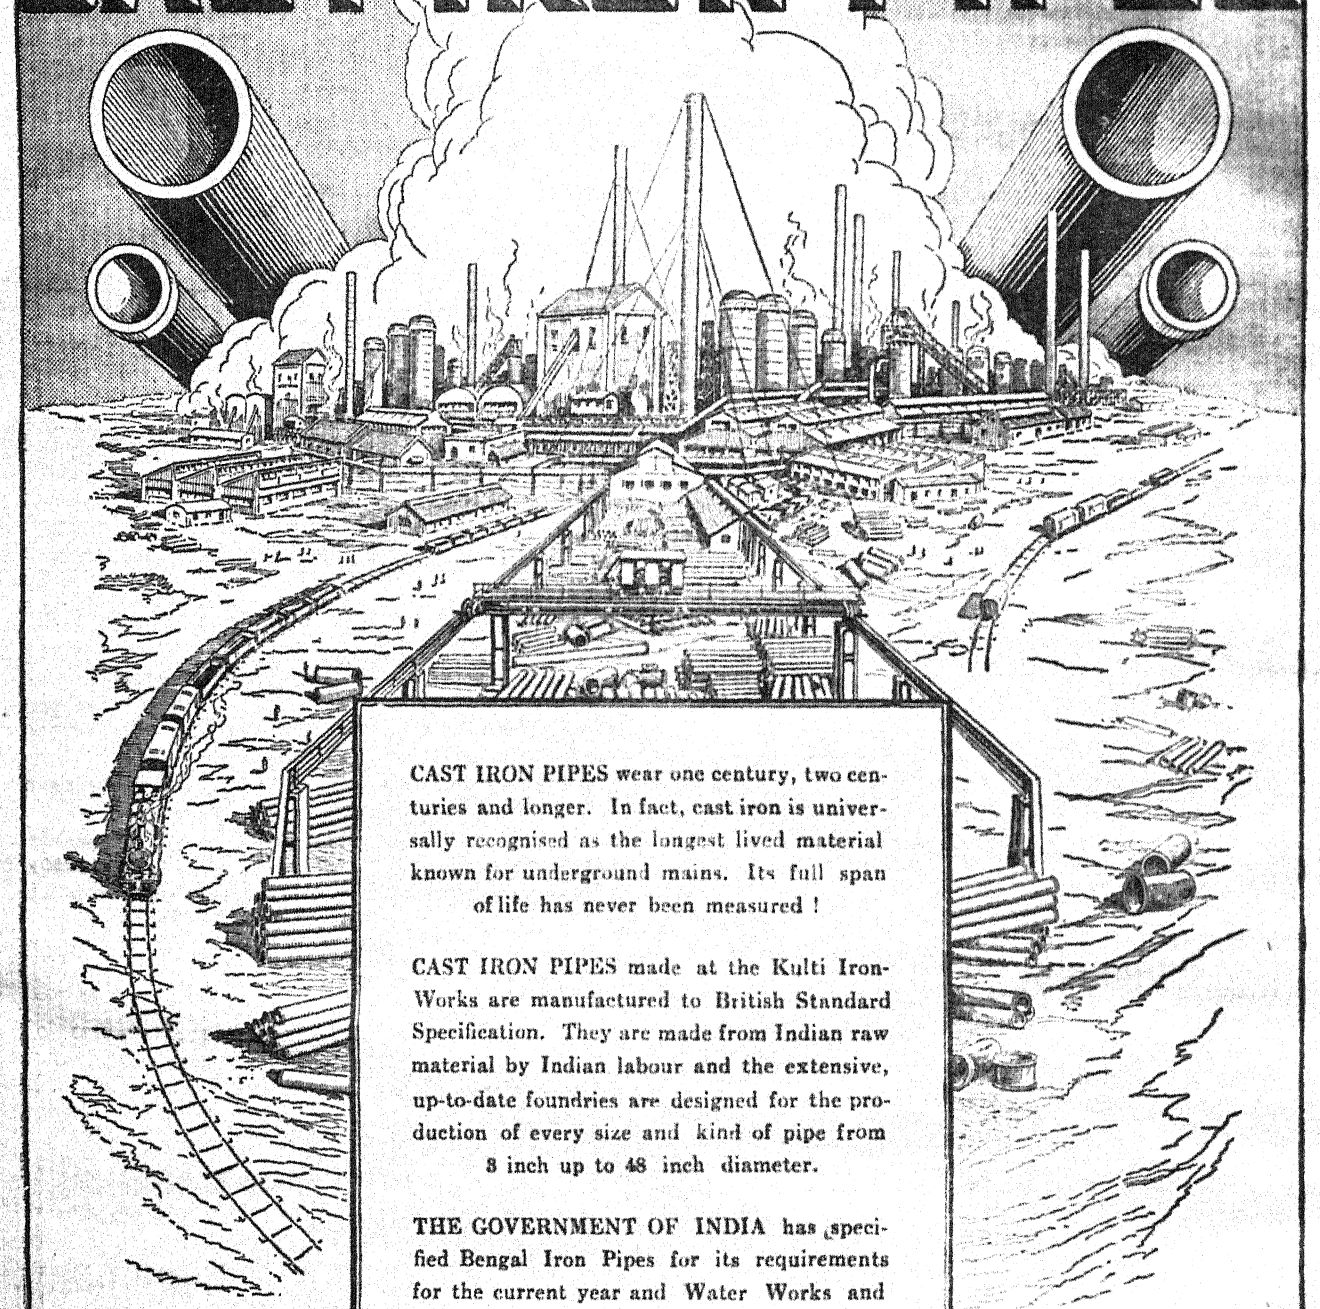
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

With Eavesdropper actually on the high seas, the reign of stop-gaps is, happily, nearing its end. I say, happily, for the role of stop-gap is never a happy one. A stop-gap ministry is notoriously uncomfortable. It has no chance of choosing its policy nor time to shape such as it finds in its hands. It is heir to all the discredit of its predecessor and all the blame which its successor can fasten on to it. The truth is it is always better to choose one of a number of roles than to be called on to fill any one that falls vacant. Eavesdropper has during these years helped his readers to acquire a taste for a kind of writing, or rather kinds of writing, for which he is supremely fitted by temparament and experience. To cater to that taste is more than others can perform. But in the lot of the journalist, there is a determinism against which it is futile to kick. And since Eavesdropper ceased to send his weekly contribution on account of the exigencies of his work in London and the inevitable preparations for the return, we here have had to add in no small measure to our difficulties by preparing this gossip as well. One can well imagine the habitual reader of these columns shrugging at the difference in tone and content. And the stop-gap can only say that the return of Eavesdropper would be a relief no less to the writer than to the reader of these columns. The next issue of *Indian Finance* will, in all likelihood, contain the genuine gossip of Eavesdropper which is different from the spurious make believe of the last fortnight.

To say that one has to rummage for a topic is to confess to one's unfitness for the role of a gossip. For gossip, even like mercy, is not strained. It is good, when it is most natural. Gossip is often thought to be a gift of style. But in reality it betokens more than the gift or talent that is necessary for a racy style. To be a successful gossip much more than a facile pen is needed. For it betokens primarily a catholicity of interest and a sympathetic understanding of one and all. Else were it impossible to note the hundred and one trifles that make the real embellishment of any gossip. It requires the ability to present in the proper light the doings of the few to the many that form the admiring audience of a gossip. There is, of course, the gift of style that takes the reader almost without his knowledge to the very end. The quality of good gossip, in fact, of all good writing is that it takes the reader through. You may grumble at the end, you may condemn the writer and his views and his theme, but once you begin, you do not stop half-way. The gassip's style has to possess this quality in abundance. And it is inconceivable how one can read on through two columns or three unless the trifle in every line has some attraction or other to the average reader. Thus an understanding of the mind of the many is essential for a successful gossip. Often he may find his problem solved by the emergence of an all absorbing topic of public interest. And with the theme handy, the gossip might well weave into the web of his writings many an attractive pattern of words and ideas. But when such themes are lacking he has to possess the knack of choosing what may be called tremendous trifles.

At the moment no such trifle or profundity is at a spate of hectic holidaying. Indeed, such holidaying might well last for more than the avowed holidays. For the holiday feeling invariably starts earlier than the allotted days and lingers longer in office and factory. The jaded journalist is more off colour after a long break from work than the follower of any other profession. I was saying to a colleague this morning that the next time I take a holiday would be when I retire from the work altogether. For there is no instrument which rusts more with 'disuse than the pen. It is not only the difficulty of regaining one's ability to think useful or interesting thoughts. For few of us cut ourselves from our usual intellectual interest. For us, a holiday is not mere long hours of out door exercise interspersed with effortless perusal of six pennies. We do retain our interest in the more profound aspects of individual and social life. For my part, I have spent no small part of my time over Trosky's *History of the Russian Revolution,* a work which calls for an active mind keyed to the highest pitch of receptivity to new ideas. I have met during these days more than one Professor of Economics who had come to Calcutta for the Economic Conference. And not one of them was prepared to show any consideration for the mental relaxation of a holiday period. It is not the lack of ideas, I say, that stands in the way when you return to work after a long holiday. It is the difficulty of presenting them, a temporary forgetfulness of the sheer technique of writing. As I said, there is no instrument which rusts more in rest than the pen. And it seems to make no difference that nibs are now-a-days made of gold!

The plight of other offices might be easily imagined. Clive Street, assuredly, will take another fortnight to recover from its somnolence. I was about to say a week, but extended the term, when I suddenly recollected that next week is not much different from this. With two holidays coming close on Sunday, one might almost say that X'mas and the New Year cover the whole of the first week of January; and one can only look in vain for that animation without which gossips would find their occupation gone.

But Clive Street can be sleepy only in its constituent offices. Taken as a whole it can rarely, if ever, go to sleep. The need for sustained watchful-

ness is all the greater to-day, with industries faced with a number of problems resulting from the depression and the political conundrums proving more difficult with every apparent solution. Clive Street, as signifying big business, is, indeed, watchful all the time. The recent meeting of the Associated Chambers of Commerce is ample testimony that British business in India is not only watchful but has its vision projected far into the future. It has proved itself equal to putting through a business and a diplomatic deal at the same time. It has safeguarded its immediate interests in this country; and though politics is often thought to be distasteful and uncongenial to businessmen, British business has come out best from the tangle of policies and the conflict of interests which constitute the new Reforms. When the Viceroy opened the session, the Associated Chambers would vouchsafe him no more than a general support of the Reforms Scheme and reserved their opinion on matters of detail.

British business in London has of late learned much from which its pioneers in the past would have kept miles away. This is only a natural development. For apart from the question of the Reforms, the Government have come to interfere more and more in business; and business must learn to return the compliment. It is some time since the jute trade and industry had virtually to establish a liaison office with the Government House and Writers' Buildings. It was then the restriction of jute goods. And now it is the restriction of jute itself. The Government are no longer mere observers. They are in the thick of the fight. They are committed to restriction and a rise in the price of the raw material. They did not come in to appease a popular clamour, but chose this policy deliberately in recognition of its importance to the provincial economy. Failure would drag the Government into far more disrepute than they, perhaps, recognise. Hence the grim resolution which they have brought into play. But now that they have come to grips, they find that restriction is not quite in accord with powerful interests. The exact percentage of restriction is important both to the Government and to the various interests. But I shall not dilate on this, which is more appropriate for Editorial comment. I shall only say that here is a problem in which Clive Street will have to be awake and Government will have to be more eyes than ears.

With the heads of the Reserve Bank gathered in Calcutta and the Government paying its annual homage to this former seat of its power, the Reserve Bank may well be said to have been formally inaugurated from now. By all tokens, the preliminaries are complete. The formalities of a second meeting of the Central Board before the issue of the shares will soon be completed. Mr. J. B. Taylor will be in Calcutta shortly to carry out the shuffling of the staff of the Currency Department and of the Imperial Bank to yield the workers for the Reserve Bank. It may be said that the Bank will be ushered in according to programme.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, January 1.

Writing on New Year's Day one cannot forget to take note of the Honour's List issued this morning. In a sense, these lists are political barometers and indicate the forces that have arisen during the half year requiring appeasement. Of course, this test applies, in the aggregate, to a very small proportion of the List. But, then, the only interesting part of the list is that which reflects this aspect of Government's policy.

* * *

So far as government servants go, more or less routine procedure is followed. For instance, a Director of Public Information in the Government of India gets a C.I.E. Mr. Rushbrook Williams got it; Mr. Coatman had it; Mr. R. S. Bajpai would have got it, but for his premature death; and now Mr. Stephens gets it. It is true that coming to Mr. Stephens at such an early age the honour is doubly interesting, but it has been associated, by routine, with that office and he was bound to get, if not this year, sooner or later.

* * *

There are also some comic aspects of the List. For instance, an official told me that he had been recommended for the title of a Khan Bahadur five years ago when the title seemed to fit in with the role he was filling. Since then he has grown in age and importance and in official rank. But the official routine has kept to its rigid rule and when he has got his turn he gets what was originally recommended five years ago.

* * *

One drawback of the present arrangement is that the *Gazette of India* makes the pronouncement in the usual long-winding terms describing the entire Order. The Gazette does not give the short letter title by which a holder is expected to lengthen his name. The result sometimes is curious. This morning, for instance, *The Hindustan Times*, in a bold type heading on its front page describes the Maharaja of Karauli as having become a G.C.S.I., while actually the title given is a K.C.S.I.! It is necessary, therefore, that the titles be described by the official Gazette in their abbreviation.

* * *

I have digressed from my main theme. I said that the Honours List is a political barometer. I will illustrate this by some striking examples which may not catch the eye of the ordinary newspaper-reading public. Take the out-going Assembly. Quite a number of its members were pestering Government with requests for nomination for services rendered in the last Assembly.. Government could not appease them all, but there was an alternative. And the Honour's List has come handy for the purpose!

* * *

Five ex-M.L.A.'s figure in it. And they all belong to that little band of elected Members who consistently voted against the popular side. Mr. R. P. Bagla becomes a Rai Bahadur. Kunwar Gupteshwar Singh, Rai Bahadur Brij Kishore Sardar Majumdar and Malik Allah Baksh Tiwana get their share of titles. One may be sure now that none of these will appear in the list of nominations to the Assembly which will be published this Friday.

* * *

Another definite indication is that Government are prepared to offer similar honours to those of the new Assembly who may ally themselves with the Government. They have already achieved a signal success in awarding a Rai Bahadurship to Seth Bhag Chand of Ajmere, who was the first to defeat a Congress candidate in the last Election. One may presume that the new title holder will not disappoint the authorities who recommended him for this distinction.

* * *

There is yet another test that must be applied to the List. The Round Table Delegates have fallen from their position of esteem. None of them figures in the list. One might suppose that Mr. A. H. Ghuznavi was expecting to be knighted and that Dr. Shafaat Ahmad Khan was equally hopeful. Mr. H. P. Mody has often been mentioned as a probable. The list omits them all!

* * *

Yet another disappointment. When the Executive of the Federation of Indian Chambers of Commerce met here recently every one suggested that a knighthood for Lala Shri Ram was a certainty; that, besides being an ex-President of the Federation, the Lala had been on the Trade Mission to Kabul; that he was one of the most successful and sound businessmen in North India and that his selection for Directorship of the Reserve Bank was another proof of the confidence he enjoyed with the Olympians. And yet he is not honoured.

* * *

I am told that the Indian commercial magnates have made the position of the Government a little delicate in the matter of honours. Already the Government Members have given up the practice of attending the Associated Chambers meeting, and now the Government is wondering whether it should continue to give a knighthood, as a matter of routine, to the President of the Associated Chambers. Perhaps they will not, but the remedy will be found by bestowing honours on European merchants, not in their capacity as spokesmen of the Associated Chambers but as representatives.

* * *

The Punjab continues to provide, perhaps, the most interesting part of the Honours List. For a number of years Muslim citizens of all shades and grades have been awarded sundry honours and even knighthoods. The Hindus were neglected. That policy led to the ridiculous result that, whereas young Noon as Minister was knighted, his aged father, who was Commissioner of Lahore Division, had no such title. And that anomaly has now been rectified by giving the father a knighthood!

* * *

Again, no Hindu Minister ever got a knighthood. Lala Harkishan Lal, Dr. Manoharlal and Dr. Gokul Chand are men of real calibre and merit. None of them was given a knighthood. Now that the injustice has been recognised, Dr. Gokul Chand is lucky in getting a knighthood while his two senior predecessors are still ignored.

* * *

Mahatma Gandhi is here and is, as usual, very busy. Whoever may deny it; the fact remains that General Smuts has been trying to find a bridge between him and the British Government. I am told that Mr. Lloyd George and Mr. Churchill would be prepared to go far to meet the Indian point of view if only Gandhi can be made to come to terms. But the Olympians are against such a move, so that the Mahatma's visit to Dehli will do no more than raise Harijan dust.

(FROM OUR CORRESPONDENT)

December 20.

Another Christmas has come and gone and the newspaper reporter has once more to go on his sordid rounds for materials to fill the quota for which he is bounden to his head office. The holiday mood takes some time to wear off and even with the advent of the new year, and with it new responsibilities and duties, one feels the holiday *ennui* lingering at the back of one's brain. But duty is a hard taskmaster and very soon these cobwebs of illusion are dispelled.

In a Christian land, the season of charity and goodwill may have a salutory influence on a difficult industrial situation. But Christmas obviously leaves the hardboiled cotton industry in Bombay cold. Rumours of strikes and disputes over wages continue unabated in Ahmedabad. The decision of the Ahmedabad millowners to make a corresponding reduction in wages owing to the introduction of the nine-hour day has given rise to a great deal of misunderstanding and nervousness in the labour ranks.

The Mill authorities take their stand on what they consider to be an equitable arrangement and declare that it is not really a wage cut but a wage arrangement synchronising with the number of working hours. They draw the Labour Asssociation's attention to the fact that the award of Mr. Gandhi and the Late Seth Mangaldas Girdhardas settling certain scales of pay were on a ten-hour day basis. What is contemplated now is to spread the same wage over six nine-hour days instead of over 5½ 10-hour days. The Ahmedabad millowners in support of their decision contend that:—

(1) in 1933 the profits of the mills were much lower than those in 1932 and even lower than the average for the last ten years;

(2) the agents of the mills had to give up about 40 per cent. out of their commission in order to set aside some amount against depreciation of machinery and to give dividends to shareholders;

(3) the mills could take only half the amount then legally due towards building and machinery depreciation;

(4) almost all centres in India had reduced wages considerably and the wages in Ahmedabad were much higher than those in any other centre and even higher by 27 per cent. than the wages in Bombay as acknowledged by the Labour Union before the board; and

(5) the index of the cost of living of the workers had fallen to the level of 1913, whereas workers' wages were even to-day more than twice than those in 1912.

But the Ahmedabad Labourer is far from contented, specially in view of the fact that the position of his fellow worker in Bombay is very different. There the mills have agreed to pay all time workers the same wages for the nine-hour day as they are now paying for the ten-hour day. And in the case of piece-workers, compensation will be given for the reduction of output, which would follow on the introduction of the reduced hours, by an increase in the dear food allowance from 35 to 40 per cent. It will thus be seen that conditions are by no means peaceful within the cotton industry and one wonders when, if ever, things will take a definitely better turn. In the meantime, H. E. Lord Brabourne, Governor of Bombay, in rewly to an address of welcome presented by the Ahmedabad Millowners' Association warned the millowners against the evil of overproduction.

His Excellency said: "But of late I have been wondering whether you, in common with other textile centres, are not being a little too enterprising. It is fine to see the wheels of industry turning so merrily and the machinery of progress working day and night, but the produce of your spindles and your looms have to be sold and at a fair price.

> "Over-production may be as injurious to trade as idle mills, for one may lead to the other and I trust that you and the mill-owners in other centres throughout India will not lose sight of this profoundly important economic fact."

In view of the experience of various industries in recent times the warning from His Excellency does not come a moment too soon.

The New Year is to see the abolition of one more odious and uneconomic form of taxation in Bombay. It has been decided by the Government to abolish the road tolls which are a blot in Bombay's escutcheon. According to the scheme, there will be only one authority for collecting the tax, and the motorist will not be bothered about paying different taxes to different authorities as in the most primitive countries. The Municipality naturally looks askance at the complete abolition of an arrangement that put about Rs. 10,50,000 annually into its coffers. But it has been proposed under the new agreement to give to the Municipality 10 per cent. more than its present income on wheel tax. The extra ten per cent. is meant to compensate the Municipality for possible increase in the number of vehicles in the future. The scheme is very welcome if only to bring Bombay into line with the modern cities of the world. And as long as it does not increase the already heavy incidence on the road user, it is completely justifiable.

The report of a strike comes from far off Karachi. The motor-lorry drivers and camel-cart men have gone on strike, with the result that transport activities in the city and port of Karachi came practically to a standstill immediately before the beginning of the holidays. The strike was organised by the Karachi Transport and Carriers' Association who allege that motor-lorry drivers are being harassed by the Police. It is true that recently the motor vehicle rules were being scrupulously enforced in Karachi as a result of the appointment of an expert mechanical engineer as inspector of motor vehicles, and the recent provision of a weight-bridge capable of ascertaining the weight of loaded lorries. The camel-drivers, of which there are about a 1,000 in Karachi, made common cause with the lorry-drivers and this left the otherwise crowded Karachi roads to the mercy of the donkey carts and a few stray bullock-carts. The Port also had a deserted look and thousands of tons of goods which arrive daily by the N. W. R. remained unmoved. The strike leader met the Superintendant of Police and offered to call off the strike provided the maximum load allowed on motor-lorries was increased all-round. The police, however, refused to accede to the request. A tentative agreement was however arrived at as a result of which a large proportion of the transport force was back to work on December 22. The strike leaders decided to put their grievance on paper for submission with a proviso that if they were not redressed by January 15, they would go on strike again.

The textile merchants in Bombay are still worried over the smuggling of silk through foreign ports and across the frontier; and Mr. Mathurdas Vasanji, President of the Indian Merchants' Chamber, has stated that silk is largely smuggled into Sind *via* Baluchistan and Quetta through the free port of Parsni, situated in the gulf of Oman. It is also a favourite trick with the smugglers to import foreign

(Continued on page 31).

THE GOLD BLOC

1935, CRITICAL YEAR FOR GOLD CURRENCIES

DEVALUATION NOT DISTANT

By PAUL EINZIG

(Special to "Indian Finance.")

[*The future of the gold currencies is the burning question before the world to-day; and Mr. Paul Einzig is one of the few men who can speak with authority on the subject. His competence in pronouncing on the present fiscal situation of the world is unchallenged; and in view of the nervousness that prevails in many quarters over the currency questions, his views are of outstanding interest and weight.*]

It is hardly possible nowadays to glance at a newspaper without discovering in it a solemn statement by one of several members of the Gold Bloc reaffirming, for the hundreth time, their determination to retain their currencies at the existing parities. In spite of this frequent reassurance, or possibly because of it, many people are convinced that the devaluation of the gold currencies is a mere question of time. This scepticism is not at all surprising. After all, every country, which in the past suspended the gold standard or devalued its currency, made similar reassuring statements, quite shortly before the event. It would be, indeed, too much to expect a Government to admit that the question of devaluation is under consideration. By doing so, they would give rise to a wholesale flight of capital and a bear campaign against the national currency, which would interfere with their plans. After all, most Governments, even if they have made up their mind definitely to abandon the defence of their currency, prefer to take the necessary steps in their own way and in their own time, rather than being rushed into action by an irresistible wave of selling pressure. It is obviously to their interest, therefore, to deny emphatically any intention of changing their policy until the very eve of the change. These are lies which are forgiven in this world, and presumably also in the next world. And any Government, which for moral consideration refrain from denying their intention to abandon the existing parities for at least a fortnight before the act takes place, deserve to be complimented on their exceptional righteousness.

In pointing out these rules of international monetary ethics and etiquette, we do not mean to suggest that any of the gold countries has actually made up its mind to abandon the gold group, and that the denials they issue nowadays at frequent intervals merely serve the purpose of covering the preparations for the change. Quite conceivably, none of the six Governments representing the countries of the Gold Bloc have arrived at any definite decision. On the other hand, it is highly probable that, with the possible exception of France, they all have the question under serious consideration; and in our opinion, the chances are that in the course of 1935 they will, in fact, all decide upon the change. This view is held widely in the foreign exchange markets, and, if, in spite of this, there is at the present moment no spectacular selling pressure on the gold currencies, it is because the change is not considered to be imminent.

Unquestionably, Italy and Belgium are the two weakest links in the chain. The chances are that one of these two countries will be the first to take the fateful step which will inevitably affect the policy of the remaining gold countries. Strictly speaking, Italy does not technically belong to the gold group any more than does Germany, for the lira is at a discount of about 4½ per cent. against the dollar, which is far beyond the gold point. What is more, exchange restrictions of Draconian severity have been adopted in Italy, so that the lira cannot be said to have a free market. If, in spite of this, both Italy and the other members of the group prefer to uphold the fiction that Italy is still on a gold basis, it is due to considerations of politics and prestige. The question is: How long it will be possible to uphold the fiction? The technical position of the lira is very weak, as a result of the decline of the gold and foreign exchange reserve by some one and a half milliard lire during the past twelve months. The reserve ratio is barely above the legal minimum of 40 per cent. It is true that steps taken towards the reduction of the note issue and the mobilisation of privately-owned foreign assets, may temporarily improve the technical position, but in the presence of an adverse trade balance and an outflow of capital, there is good reason to view the prospects with pessimism. Unless the Italian Government adopt methods similar to those adopted by Germany in the defence of the reichsmark, the defence of the lira will have to be abandoned within the next few months. As the adoption of the German method would result in a rise in internal prices, which is exactly what the Government are desirous of avoiding at all cost, the chances are that confronted with this dilemma, the devaluation of the lira will eventually be regarded as the lesser of the two evils.

The technical position of the belga is incomparably stronger than that of the lira. In spite of the recent heavy losses of gold, caused by a flight of capital, the reserve ratio is still 66 per cent. Moreover, the Belgian Government succeeded in obtaining a credit of one and a half milliards of Belgian francs in Holland, which for the moment strengthens the technical position. On the other hand, the industrial position in Belgium is probably more unfavourable than that of any other member of the Gold Bloc. Belgian coal, machinery and textiles are in direct competition with the corresponding products of Great Britain; and the exchange difference places Belgium at a grave disadvantage. There is a strong movement of opinion in favour of devaluation; and it has supporters within the Cabinet itself. It is well-known that before joining the new Government, M. Francqui was one of the leaders of the movement. In Parliament, the policy of maintaining the belga at par can barely command a working majority. In the circumstances, it is conceivable that the adherents of devaluation will have their way sooner or later.

Should Belgium decide to devalue, it is unlikely that Holland would retain her present parity much longer. In any case, her foreign trade is suffering from the over-valued currency, which has destroyed her colonial prosperity. It is believed in usually well-informed quarters that the Dutch Government have, in fact practically decided to devalue, only they prefer to wait until sterling and dollar are definitely stabilised. Should Belgium abandon the Gold Bloc, it would in all probability induce Holland to hasten.

As for Switzerland, the over-valuation of her exchange has produced a disastrous effect upon her tourist traffic. To mitigate the evil, the Association of Swiss Hotel-keepers recently decided to accept sterling from British visitors at the fixed exchange rate of 26 francs

15.30, the concession is not particularly impressive. It amounts to rather less than 5 per cent., which is hardly likely to induce many visitors to spend their holidays in Switzerland. Should Italy devalue the lira, the competition of Italian holiday resorts would further worsen the plight of the Swiss hotel industry, and might provide the last straw which would break the resistance of the Government to the pressure favouring devaluation.

As for Poland, thanks to a low standard of living, she is in a more favourable position, in a way, than the other members of the gold group ; but she is not likely to be able to withstand the strain caused by the psychological effect of the devaluation of any of the gold currencies.

Let us now consider the position of France. Technically the French franc may appear to be unassailable. In spite of this it is unthinkable that France should retain her present parities if all other members of the Gold Block devalue their currencies. Even though the franc would be able to resist the effect of an adverse trade balance for some years, the political discontent caused by further deterioration of her trade might easily prove fatal to its stability. The weak spot of France is her internal political situation, and the unsteady nerves of her public. Should, for some reason, the internal disturbances experienced in February, 1934, recur, the panicky mentality of the public would soon lead to a wholesale flight of capital, and the Treasury would find it once more difficult to meet its requirements. In any case, the budgetary situation is much more unfavourable than is indicated by the official figures of the deficit. Allowing for items which are not included in the ordinary budget, such as the railway deficit, the additional defence expenditure, and the public works expenditure, the total deficit for 1935 may be estimated at between 8 and 10 milliard francs. This, together with a possible revival of the wave of distrust, might conceivably render the franc vulnerable, even if no other member of the gold group dealues its currency.

In the circumstances, it is reasonable to assume that 1935 will be the critical year for the currencies of the Gold Bloc. Although their devaluation will introduce new complications in the international financial and commercial situation, in spite of this, it would bring the world nearer disentanglement. So long as countries of the Gold Bloc continue to defend their over-valued currencies, in doing so they have to maintain and even increase the barriers erected against the normal flow of international trade. They have to defend their internal markets against the competition of foreign goods, and they have to defend their currencies against the effect of excessive imports. The devaluation of their currencies would go a long way toward facilitiating the removal of quotas and other obstacles to trade. What is even more important, it would put an end to the deflationary tendency which constitutes the chief obstacle to world-wide trade revival.

FINANCE ABROAD

(*Continued from page 3*).

Thus, the statement which appeared in the Italian Press cannot alter the situation except in regard to the immediate outlook of the lira. It is even said that the decrees regarding the handing over of foreign exchange to the Government are not meant to be brought into immediate effect, that they are meant to be a reserve of power and that the situation is not as critical as one might imagine. But the long view remains unaltered. The future of the European gold currencies is the subject of an illuminating contribution from Mr. Paul Einzig, which appears in this issue of *Indian Finance*. Mr. Einzig rightly takes the view that the devaluation of the gold currencies is only a question of time and that the policies of the authorities, while they may postpone what they consider to be the evil-day, cannot ward it off altogether.

GATEWAY OF INDIA

(*Continued from page 29*).

piecegoods from the United Kingdom without any marks to indicate the names of the manufacturers or the country of origin. And a similarity to local designs facilitates the palming off of such imported goods as Indian. In view of this fact,it is perhaps necessary to amend the Indian Merchandise Marks Act to provide that all imported goods should distinctly show their country of origin, and the custom provisions also should be overhauled to prevent such backdoor competition with the Indian textile industry.

Turning now to legitimate imports, there was a further increase in the quantities of cotton yarn and piecegoods imported during the month of October as compared with the previous month owing to considerably higher imports from the United Kingdom.

The total imports of cotton yarn of all descriptions amounted to 1.1 million lb. as compared with one million lb. in September. Of this quantity, the United Kingdom supplied 221,000 lb. as against 156,000 lb. in September ; Japan 475,000 lb. as against 417,000 lb. and China 388,000 lb. as against 416,000 lbs.

The total importations of cotton piecegoods into Bombay during October amounted to 32.4 million yards as compared with 26.2 million yards in the previous month. The United Kingdom increased her exports to India, particularly of printed and dyed goods, by 4½ million yards to 13.2 million yards, while imports from Japan at 17.7 million yards were 1½ million yards higher.

The imports of artificial silk yarn showed a substantial increase during the month, takings rising by 170,000 lb. to 793,000 lb., of which 500,000 lbs. came from Italy as against 322,000 lb. in the previous month. Japan came next with 252,000 lb. or 15,000 lb. lower than in September.

Imports of artificial silk goods (both pure and mixture fabrics) were again higher 5.8 million yards as against 5 million yards in September. Japan increased her sendings by 800,000 yards to 5.5 million yards.

The report of the Department of Industries of the Government of Bombay for the year 1933-34 has been published. And the survey made therein of the more important existing industries and of several new industries established in the Presidency during the year makes interesting reading. Apart from the prevailing depression, local industries suffered greatly from severe Japanese competition as a result of the unprecedented depreciation of the yen. The market was flooded with extremely cheap Japanese goods against which local goods bear almost a prohibitive price. Eleven out of 25 mills working in the city showed a loss of Rs. 22,66,000 and 14 showed gross profits of Rs. 26,88,000, not allowing for depreciation and only nine declared dividends, three of them from equalisation funds. The condition of the woolen mill industry was also hardly satisfactory. The 2 mills which continued to work in the presidency showed a decrease of 31 per cent. in the quality of woolen goods produced. Up to the end of February 1934, imports of woollen material in Bombay and Karachi amounted to Rs. 139,29,000 and Bombay woolen mills supplied only a negligible part of the Presidency's requirements.

Seven new sugar factories were erected in the Presidency during the year and imports of sugar into Bombay and Karachi decreased from 200,000 tons in 1932-33 to 158,000 tons in the year under review. Among the new enterprises the chief were factories for the manufacture of biscuits, envelopes, bicycle-tubes, bakelite accessories, batteries and razor blades. The latter bear good comparison with imported goods.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

SUBSIDY FOR COTTON

The all too brief respite from work that comes with Christmas is over, and the jaded journalist is back once more at his desk. Christmas, however, serves one purpose. It inclines one to take a more cheerful view of even the most sordid prospects. With that Christmas feeling in one a survey of internal and external economies of Great Britain looks more rosy than it would otherwise have done.

Whether the industrialists in Great Britain feel that an appeal for help during the season of goodwill and charity will meet with a readier response one cannot say. But the Board of Trade is being pestered with clamorous demands for manifold subsidies. The latest claimant is the cotton industry and a strong deputation including the leaders of the Master Cotton Spinners' Federation and members of the Colwyn Committee has already waited on Mr. Runciman with that object in view. The Government's position is made weaker by their declared policy of direct help to distressed industries. And it is interesting to observe how the Government can with good grace refuse to help a genuinely distressed industry when it has extended its help substantially to oher industries, such as tramp shipping. In reply to a question on the floor of the House Mr. Runciman announced that if the proposals for the elimination of surplus spindles received the support of a sufficiently influential proportion of the trade, he would be prepared to ask Parliament for statutory sanction for the collection of the necessary levy. He assured the Committee that if notwithstanding statutory sanction for the levy, they were unable to borrow the necessary loan on the security thus provided and the success of the scheme was thereby endangered, the Government would find some way to assist them to borrow the money. One cannot quarrel with such a policy of fostering care on the part of the Government for distressed industries. But where, one may ask, is this policy of granting subsidies going to end? Already a colosal amount has been spent on this account. Mr. Duff-Cooper, Financial Secretary to the Treasury, in reply to a question submitted the particulars and amounts of all subsidies to which the Government had been committed since October 1931. They include a sum of £3,300,000 provided in the 1934 Estimates in respect of the beet sugar subsidy; advances not exceeding £3,000,000 (recoverable) under the Cattle Industry (Emergency Provisions) Act, 1934; repayable advances of around £250,000 under the Milk Act, 1934, and payments not exceeding £750,000 and £1,000,000 respectively in quality improvement and marketing provisions; supplementary herring estimate of £25,000; "tramp" shipping subsidy, not exceeding £2,000,000; subsidy of £210,000, and grant of £5,000 in respect of civil aviation.

The figures exclude grants to local authorities and grants from the Colonial Development Fund.

Are the resources of the Government so endless that it can open its coffers to all who need help and succour?

Exports and Imports.

The export and import statistics for November have been published. Total exports in November were £36,125,000 compared with £36,749,000 in the preceding month and £34,435,000 in November 1933. Imports were £64,687,000 against £68,994,000 in October and £63,729,000 in November last year. For the eleven months of the year exports have risen from £337,012,000 in 1933 to £361,873,000 and imports from £612,851,000 to £669,603,000. Imports thus were of considerably smaller value than in October, while exports were only slightly lower on the month. The slight fall in exports is accounted for by the decrease in the exports of manufactured goods. In October the figure for this group was £28,527,000 while for November it amounted to £27,407,000. There was also a slight decline in the value of raw material exports from £4,466,000 to £4,268,000. As against these the exports of food, drink and tobacco increased from £2,794,000 to £3,017,000. And parcel post traffic also rose from £897,000 to £1,361,000. On the imports side also food, drink and tobacco accounted generally for the decline, U.K. importing nearly £3,000,000 less of these commodities during the month. Compared with the corresponding months of the previous year, the figures give a fairly bright picutre. And for the whole period of the eleven months also the total volume of Britain's trade shows a substantial increase.

The Coal Scheme.

The scheme for the Federation of the 61 Colliery Companies operating in the West Yorkshire coalfields is now complete. It has been submitted by the Coal Mines Re-organisation Commission to the Board of Trade, and, if sanctioned, will come before the Court of the Railway and Canal Commission for final and binding approval.

The scheme provides for the compulsory federation of the coal-owners into a partial amalgamation, "for the purpose of promoting the more economical and efficient working, treating and disposing of coal." The governing body will be a Joint Committee, containing one representative of each coal-owner in the coalfield.

This Committee bears the ultimate responsibility, and, for most fundamental decisions, the assent, on a tonnage basis, of 85 per cent. of the owners is required. The main work, however, will be done by the Executive Committee of ten owners' representatives, appointed by the Joint Committee.

The powers and duties of the Executive Committee are virtually five-fold. They include:—

(1) The compulsory closing of coal mines in the district, with compensation, and subject to the decision of an arbitrator appointed by the Joint Committee.

(2) The supervision of purchases of coal mines by other members of the Federation. If an owner wishes to sell his mine, all the other members will have the right to participate in the purchase.

(3) The distribution of quota tonnage. When a mine is closed under (1), its quota tonnage, separated as between inland supply and export, will be distributed among the members in proportion to their contributions to the levy for compensation. This levy is fixed by the Executive Committee. When a member wishes to sell a portion of his quota he will only be allowed to do it through the Executive, and all other members will have the right to participate in the purchase. Otherwise, the quota allocation continues to follow the principle laid down in the Coal Mines Act, 1930.

(4) Co-ordination of marketing. The Joint Committee may empower the Executive to issue regulations providing for the enforcement of standard conditions of sale, the making of marketing agreements, the fixing of minimum prices, and the arranging of exchanges of markets.

Air Mail Week.

(5) The purchase of stores.

Unemployment.

Unemployment, however, still continues to be the blot on Britain's escutcheon. The November figures for unemployment have been published and while unemployment has increased slightly by 1,150, employment has also increased by 6,000. Normally, it is true that there is usually very little change from October to November. The seasonal decline in building, contracting and hotel industries is generally offset by seasonal improvement in coal and wool. It has also happened this year but the fateful two million mark in unemployment still remains unchanged. In fact, the problem of unemployment is likely to prove, as it has in the past, the stumbling block in the path of the Nationalist Government. There should be complacence in Government ranks, while one worker in every six remains unemployed. It is true that the Government have inaugurated various schemes of relief and a completely novel national fiscal policy, but the hardboiled Britisher is prone to interpret prosperity in terms of unemployment. And until this stolid two million mark is definitely dislodged, the Government cannot count on solid support from the country.

U. S. A.

GOLD MOVEMENT & GOLD STOCKS

The situation in America is such that one can say no more than that it is pregnant with possibilities. Neither the objective situation as it is, nor the state of opinions allows any kind of generalisation. Matters are in a flux ; and opinions, too, have gained during these months a mobility which is notoriously in conflict with a clear outline. One sees little of that intransigence which characterised alike the support of and the opposition to the policy of the New Deal. There can be no doubt that the opposition has considerably relaxed. And it is more true than ever that the Recovery Administration are ready to acknowledge the seriousness of some of the problems and the dilemma with which they are faced. In their case it is perhaps inaccurate to say that there has been a change of opinion. They have never claimed that their policies are the last word on the question of recovery. They have always kept a genuinely open mind. They have been prepared to retrace their steps whenever they find themselves faced with either a precipice or a blind alley. The change, therefore, is restricted to a recognition never altogether absent, of the need for co-operation from those sections of business and groups of parties which formerly presented only an inveterate opposition to the recovery programme. The Administration, far from being cowed by such opposition, felt their banks put up by such an attitude. The Administration's idea of meeting such opposition was almost personified in General Johnson, who thought that an impetuous attack must remove all such opposition. And, to his credit, it must be said that, but for the energy and the courage with which he pushed the programme in the early stages, Mr. Roosevelt's experiment might never have had a chance. But there is a point at which such impetuosity must stop and the Administration should make a genuine bid for cordial co-operation from all sections of business.

The retirement of General Johnson, though, undoubtedly, due to some personal reasons, may also be said to signify a change in the attitude of the Government to the recalcitrant groups in trade and industry. Though the President is far from prepared to go down on his knees before the bankers and big business, he is prepared to appeal to them in the common interest to help further progress on the lines chalked out by him. It might even be said that the President is no less prepared to-day than during the days of General Johnson's supremacy to sweep opposition violently with the power of the law behind him. It will be remembered that in his last address to the Bankers he made an unmistakable reference to the consequences that would follow the bankers' failure to take him at his word. But this is only a mention of an unmistakable fact. It does not detract from the essentially conciliatory attitude of Mr. Roosevelt.

As for business, it is still governed largely by experience. After more than a year of the recovery programme, it cannot possibly make any mistake about the solid support which Mr. Roosevelt commands both in Congress and in the country. Nor can it underrate the factor of Mr. Roosevelt's personality and his unshakable determination to pull the country out of the morass of the depression. At some stage business might have clung to the hope that popular support of the recovery programme was but a passing fancy, and that, when the public suffers a disillusionment consequent on the lack of immediate amelioration of the lot of the individual, the people would change their mind and Mr. Roosevelt would be handed over to the tender mercies of big business. But such hopes, were they entertained at any time, have been completely falsified. The Congress elections have been most decisively in favour of Mr. Roosevelt. Far from there being any sign of popular discontent with the recovery programme, it is almost a mandate that the Government should be impelled to go further on the same path. For, the new Congress is even more left than the President himself, so far as the recovery measures are concerned.

American business knows only too well that, if the President should fail to command the co-operation of business circles, he would inevitably be thrown into the hands of the more extreme sections of the Congress and that, so far as business is concerned, the resulting position would be much worse. This is possibly the most powerful force drawing business closer towards the President. But it must not be overlooked at the same time, that the position which has resulted from the recovery measures is such that a return to the old order is no longer easy. During these one and a half years and more, the structure of American economy has been altered fundamentally. To cry for a return to the old conditions would be to cry for the moon. The utmost that business can ask for is that no more extreme measures be adopted by the Administration and that efforts be made for the preservation and progress of all that is good in the present position. This incipient rapproachment between the President and business is the most heartening feature of the present situation.

Apart from the piquant interest of the political position in regard to recovery, there is, indeed, very little to note in the world of American business. The signs of activity in new financing which are now visible, however, call for a pointed reference. The new financing which the Government undertook in the first week of December, has brought the United States Public Debt to the record figure of 28,400 million dollars which compares with the high level reached during the Great War of 26,500 million dollars. It is significant that this sharp rise in the Public Debt has not effected the credit of the Government which continues to improve. The issues of early December were oversubscribed and Treasury Bonds and other giltedge are still strong in Wall Street, some scrips even recording new highs for the

Air Mail Week

year. The demands which the Government have made on the new capital market still leave a large amount of suplus from which deserving borrowers can draw freely. The New York City has issued 42,000,000 dollars of bonds and the Chesapeake Corporation will issue 18,000,000 dollars ten-year 5 per cent. notes, while the New York Port Authority intends to rush through a 14,000,000 dollars refunding issue before the end of the year. Further substantial increase in the new issues may be expected from the first quarter of the New Year, but there are at present certain obstacles in the way of this development. The Public Utility Companies have, no doubt, need for a large measure of new capital but, at the moment they are unable to come into the market. For Present Roosevelt threatens to bring about a compulsory reduction of rates with a view to increase consumption. Investors are naturally afraid that the yields on Public Utility shares might be very adversely affected. The utilities, therefore, are not very much in favour and the present moment is far from opportune for new financing. But here, too, there is hope. For in answer to the President's threat, the companies are prepared to go to the courts to obtain a warrant to restrain the Government from enforcing their programme. The result is that President Roosevelt has taken steps to secure a compromise. Should these efforts succeed, the Public Utility shares will recover from the cloud which they are now under ; and one might expect a spurt of new activity in the capital market.

Another important development during this period is the rise of the total monetary stocks of gold to a new high level of 8,076 million dollars on November 21. This information is afforded in the December monthly review of the National City Bank of New York. To make this figure comparable with the figures of the earlier years, it is necessary to convert them in terms of the old dollar ; and this would come to 4,770 million dollars compared with the previous ligh of 5,015 million dollars which was reached in September, 1931, just prior to the suspension of gold payments in Great Britain. The Review continues to observe :

> "If consideration, is given, however, to the fact that the reported gold stocks for 1931 included about $370,000,000 of gold estimated then to have been in circulation, but since dropped out of the figures as irretrievably lost, it would appear that the present gold stocks even at the old valuation of $20.67 per ounce, are the highest ever reached in the history of the United States.
>
> "Great mass movements of gold, such as have been common since the War, and as have been exemplified by the return of over $1,000,000,000 of gold to the United States since the beginning of the current year, are evidence of the extent to which gold has departed from its usual function in international payments.
>
> "Ordinarily, gold is used merely as a medium of settling temporary differences in the balances accruing to and from the various countries, and the amount of gold shipped has usually been only a small percentage of the total volume of international settlements taking place.
>
> "How far the world has departed from this customary usage of gold is revealed by the fact that this metal now constitutes one of the principal items in the balance of payments.

ITALY

FINANCIAL DECREES

By the time this reaches you, my readers, will have read the cable reports of Dictator Mussolini's drastic decrees. Under this declaration, Italian residents must transfer to the National Exchange Institute all securities and other credit balances held overseas. This mobilisation of foreign baiances is a further step in an attempt to maintain the present gold parity of the lira and follows the decision to raise Italian Bank Rate from 3 per cent. to 4 per cent., which was announced in November last; that is to say, all Banks, bankers, corporations and Italian residents in Italy or in Italian possessions who hold balances abroad must pay or transfer to the National Institute of Foreign Exchanges all their foreign credits against payments in Italian lira at the exchange rate of the day on which the transfer is made. A time limit of 10 days has been given. For credits a scheme is being drawn up which provides for individual treatment. All foreign and Italian bonds held abroad must be declared to Government before December 31st. The National Institute of Foreign Exchanges is given the right to make use of any credit whatever of Italians abroad that may be used for payments outside Italy, corresponding to the value of the goods exported. Those who do not comply within the time limit will be liable to severe penalties including the alternative of imprisonment with fines amounting to the whole sum of credits which have not been declared. The Ministry of Finance has been empowered to impose special compensatory taxes on foreign goods from nations which do not give Italy most-favoured-nation treatment with regard to customs duties. To implement this measure a committee is being set up to control prices for exports to prevent businessmen from showing a higher price in their invoices than the actual price of the goods imported and getting the differences on Balances abroad.

The reason for this mobilisation of the country's foreign security resources is to avoid or at least postpone departure from the gold standard, Signor Mussolini having declared recently that Italy will not leave the gold standard and will pursue an independant policy without a loan from any Power.

Where this will end, no one can say. A press propaganda has already been released to the effect that the Italian Government has a right to control the private capital of the citizens just as they control production and commerce. There have been persistent rumours of the extent to which Signor Mussolini is prepared to go to remain within the ambit of the gold bloc. No one expected that the provisions of these decrees to be so sweeping, and it is not too much to say that despite the faith of the people in Signor Mussolini's personality a great deal of consternation has been created among the businessmen because it is thought that the Government will not hesitate to deal severely with defaulters. Not a few people think that ultimate devalorisation is certain, the new measures being an index to what is to follow.

The background to this development is the fact that during the last 10 days of November there has been a heavy gold drain amounting to 110 million lira (nearly £2,000,000) in spite of the increase of the bank rate.

For some time past the political atmosphere has been charged with grave uncertainty. Talks of secret alliance have intensified the already disquieting position among the Central Powers. One of these pacts in the process of evolution is said to form a new link between France and Italy. Those in the inner circle of official reticence are talking about an alliance, economic and political, between France and Italy which should act as a guarantee against the dismemberment of Austria. It is known that negotiations have been proceeding for some time between the French Foreign Minister and Signor Mussolini which came at a more precise understanding of Italy's position **vis-a-vis** Hungary, Yugoslovakia and Austria. If rumour is to be credited, these negotiations will be formally ratified in the not too distant future.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; **"STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34**

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

JUTE AND JUTE GOODS

JUTE

January, 3, 1935.

Opening after the holidays, the jute market has ruled rather steady and a steadier tone, in spite of the bull liquidation reported last, is maintained. Although no definite information regarding the reduction in the next season's sowing is yet available the general feeling is that it would be at most 20 per cent. and at least 15 per cent. The immediate effect of the proposed reduction is fully discounted for the time being and the actual trend of the market, after the reduction is announced, will depend upon the outside market conditions in general and demand of jute in particular.

Due to intervening holidays there was very little business both at home and abroad, to test prices ; consequently they are more or less nominal. The undertone of the market is, however, steady, but fresh incentive is required to raise the prices further up.

JUTE MANUFACTURES

January 3, 1935.

Hessians market has remained steady and there was not much change in prices. Nine porter hessian has ruled between Rs. 8-14 and Rs. 9. Due to Christmas and New Year holidays there was little business in the market to test prices. Heavy goods were equally steady in sympathy with hessians market.

Total reported stocks of manufactured goods as at 31st December, 1934.

Hessian Cloth and Bags	6,33,28,111
Sacking Cloth and Bags	7,50,38,263

COTTON AND COTTON GOODS

COTTON

January 3, 1935.

The third All-India Cotton Forecast for 1934-35 has re-acted on the local market in the heavy buying on lower estimates of production, which stiffened prices. No feature of interest has developed after the Christmas and New Year holidays.

Statistically the position of the raw material is sound. All-India imports from September 1 to December 8, 1934, amounted to 499,000 bales compared with 310,000 bales some time last year. All-India mill consumption from September 1 to October last was over 72,000 bales more than last year, which stocks in Bombay, including foreign growths, are about a lakh less than at the corresponding period of 1933.

The index number of wholesale prices in Calcutta for November, 1934, calculated in the Commercial Intelligence Department reveals the following position in regard to cotton spinners' margin in India—

	Manufactured	Raw	Differences
July, 1934 ...	100	100	...
September, 1931 ...	74	118	44
February, 1932 ...	106	132	26
August, 1932 ...	105	114	9
January, 1933 ...	87	113	26
August, 1935 ...	79	113	34
November, 1934 ...	76	118	42

The American markets have fluctuated within a narrow margin. The undertone is steady.

United States ginnings on December 13, 1934, amounted to 9,174,000 bales compared with 12,357,000 bales at the same time last year.

According to a well-known firm of Liverpool brokers the price outlook is almost entirely dominated by Washington's control policy. Supplies of desirable outside growths are not adequate to make good the deficiency resulting from the withdrawal of some 5,000,000 to 6,000,000 bales of American cotton against the 12 cent loans. The consuming world will be forced to buy some American cotton on sellers' terms.

COTTON PIECEGOODS

January 3, 1935.

The opening of the local market after the holidays has revealed only a quiet undertone sustained by a continued demand in heavy winter lines. The demand from up-country centres of distribution has been good and dealers are looking forward to brisk business by the week-end.

Interesting statistics about the world trade in piecegoods are contained in the review of the Joint Committee of Cotton Trade Organisations for the third quarter of 1934. British exports to British countries increased and the total of British exports of cotton piecegoods were higher during the third quarter at 516,000,000 sq. yds. compared with 453,000,000 in the second quarter and 467,000,000 a year ago. Japanese exports declined from 682,000,000 square yards in the third quarter, being due to restrictive measures adopted by the Dutch in the East Indies and by the British in the Crown Colonies.

The Indian market, which still accounts for one-ninth of world trade, experienced a considerable improvement during the third quarter. Monthly exports to India from Great Britain averaged 54,000,000 square yards, compared with 40,000,000 in the second quarter and 30,000,000 a year ago. Exports from Japan to India were higher at 39,000,000 square yards per month, compared with 52,000,000 in the second quarter and 37,000,000 a year ago.

THIRD COTTON FORECAST, 1934-35

The total area sown amounts to 22,600,000 acres, as against 22,953,000 acres (revised) at this date last year, or a decrease of 2 per cent. The total estimated yield is 4,555,000 bales* of 400 lbs. each, as compared with 4,658,000 bales (revised) at the corresponding date last year, showing, as in the case of area, a decrease of 2 per cent.

A statement showing the present estimates of area and yield according to the recognised trade descriptions of cotton, as compared with those of the preceding year, is given below:—

BULLION

GOLD

January 3, 1935.

Very stagnant conditions ruled in the gold market during the fortnight under review. Local prices have remained almost unchanged at about Rs. 35 and London at £7-0-11. The export of gold from India continues as usual and the total export since September 21, 1934, has come to Rs. 212 crores.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,182,804 on the 12th instant, showing no change as compared with the previous Wednesday.

On the 17th instant, the Bank announced the purchase of £33,814 in bar gold.

In the open market about £1,200,000 of bar gold was offered during the week. The demand tended to be more general and in the price quoted to-day a premium over dollar parity was again established.

SILVER.

January 3, 1935.

The drop in silver due to persistent rumours of reduction in import duty and the consequent sales by long interests brought the price to below Rs. 64 during the last week of December. Gradually the prices have, however, again improved to Rs. 65; the rise being due to the absence of selling pressure, the bull liquidation being long over. The undertone of the market is steady and purchases at all declines seem advisable.

London Air Mail week:

The first half of the week under review was very steady, prices remaining unchanged at 24.7/16d. for cash and 24.9/16d. for two months delivery for the three consecutive days. A weaker tendency developed rather suddenly following a sharp decline in the Shanghai exchange; this was said to be due to operations by speculators owing to rumours of impending announcements regarding China's currency, possibly involving the devaluation of the dollar. Although official denials of such intention were soon forthcoming, there was some nervousness among bulls, the Indian Bazaars being affected in particular. Consequently, the market had to deal with a considerable amount of speculative re-selling, which caused the fall in prices.

The market shows some uncertainty at the moment, but it is considered that the set-back may prove to be temporary.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 10th instant to mid-day on the 17th instant:—

General Manager.

SUGAR

January 3, 1935.

Ready prices are steady, mainly due to some buying for outports owing to disparity between Java and local quotations.

Before the holidays it was reported from Java that the "Nivas" had sold small quantities for export on the basis of 3.05 Glds. for India, but this did not affect the local market as prices here are below Java parity.

Cawnpore market reports steady with prices unchanged.

On the New York terminal market there has been a decline of 2, 2 and 3 points in March, May and July positions respectively.

SUGAR MARKET REPORT

Semarang, December 3, 1934.

The last report was dated the 19th November, 1934.

As mentioned in that report the NIVAS brought about a check in the panic which had been the result of the aggressive selling in the Indian and China markets, by declining to sell at the equivalents to which these markets had been forced. The selling limits for India were at once advanced to F. 3.—for the West Coast ports (which were the only active markets for some time), and this was followed by some fair sales for shipment to China which represented covering of earlier commitments to that market. The sales were made for China at unchanged limits up to the 22nd ulto. from what we can ascertain. On the 23rd all limits for these markets were again advanced: India to F. 3.15 for West Ports and China to F. 3.30 and F. 3.40 for Hongkong and other China ports respectively. The advance has checked further business for the present, and only a few odd lots have been sold for these markets in the meantime, presumably covering of shipment requirements.

Reasonable business has also been done for local consumption trade, as well as for the Straits Settlements. This indicates that the stronger attitude of the NIVAS has had some influence in the market, but meantime it will be necessary for the earlier commitments to move into consumption channels before we can expect any renewed demand, and test the position at the advance now asked. Assistance was given to the position by the firmer market reported from London, with Terminal Raws shewing an increase and with sales of Raws to Refiners at better prices than were ruling the week previous. The position in New York, however, has been easier with prices sagging on Futures, and an uncertain situation especially in respect to the beginning of the next year, when sugars carried forward from this year's quota will be offered for sale in that market. Reports indicate that Cuba proposed to ship some 360,000 tons to New York before the end of December in order to fill their quota for this year, such sugars to be sold before the sugars for 1935 quota will be allowed to be shipped.

In India the only market shewing any activity was Bombay, where fairly large sales have been reported for shipments extending to May, with a few lots sold for the July/September position.

The Sales Lists of the NIVAS reported the following:

Nov. 19th about	2,000	tons	WHITES telquel for local consumption
	2,500	,,	WHITES for China
	1,800	,,	WHITES do
	1,000	,,	BROWNS (2 lots of 500) to Japanese
,, 20th	2,026	,,	WHITES for India
	812	,,	WHITES for West of Suez
	500	,,	WHITES for China
,, 21st about	2,000	,,	WHITES for local consumption
	2,000	,,	WHITES for China
	3,000	,,	WHITES for West of Suez
,, 22nd	1,000	,,	WHITES for India (2 lots
total of	4,600	,,	WHITES for China
,, 23rd	5,000	,,	WHITES for China
	1,013	,,	WHITES do
	3,000	,,	WHITES do
about	1,800	,,	WHITES for local consumption

,, 24/30th mainly small lots for local trading only

,, 30th 3,000 tons BROWNS to Japanese buyers

The total sales in the interval were about 32,337 tons WHITES and 6,510 tons BROWNS. The total as per lists to date being:—

WHITES	...	1,904,848	tons
BROWNS	...	806,059	,,
SOFTS	...	9,570	,,
MOLASSES	...	77,587	,,
		Total ...	2,798,064 tons.

PRICES.—On the 23rd ulto. limits were advanced to:

for Export to INDIA:	East Coast	F. 3.25
	West Coast	F. 3.15
CHINA:	Hongkong	F. 3.40
	Shanghai	F. 3.30

CHINA MARKET.—We have heard of practically no business with these markets for some time, and the demand is supplied by commitments going forward. Hongkong were interested at a price equal to about F. 3.15 here only. Shanghai reports sellers of Whites for shipment from Java at F. 4.02½ per 100 Kilos CIF, which is about 12½ cents under parity price.

INDIA.—The only market shewing an active interest has been BOMBAY. On the 19th and 20th ulto. sales of Whites were reported for shipments extending to May 1935 at 4/9 and 4/9½ per cwt. CIF and later some business was done at 4/10½ and 4/11½ CIF for the same positions. On the 22nd business was done at 5/- CIF for January/March whilst for December there was a buying order at 5/1½ CIF. Sellers appear to have withdrawn at under the Nivas limits, and asked about 5/5½ CIF for December to May at which we have no reports of business. Sales were also reported in Whites for July/September shipment at 5/4 and 5/4½ CIF Bombay.

Karachi market made enquiries but were unwilling to buy at the Bombay prices and from what we can learn no business of importance was placed in that port.

Calcutta and East Coast ports held entirely aloof during the interval.

Reports from Bombay dated the 24th ulto. shew sales for the previous week totalling 24,000 tons Whites, mostly January to May, at prices ranging from 4/9 to 5/1½ CIF.

Stocks on the 1st instant were reported as:

CALCUTTA	...	2,200 tons
MADRAS	...	800 ,,
RANGOON	...	1,000 ,,
BOMBAY	...	... (not given)
KARACHI	...	5,000 ,,
BHAVNAGAR	...	4,700 ,,
BEDIBUNDER	...	1,100 ,,

On present limits and exchange we quote WHITES CIF per cwt.:

for CALCUTTA, MADRAS, RANGOON,	Dec. to March,	5/6½
COLOMBO, BOMBAY, KARACHI,	do	5/5½

LONDON.—On the 20th ulto. Terminal Raws advanced considerably but reacted again to close at about ½d. advance. A large trade was reported in Refined Sugar, but on Refiners advancing prices the demand was checked. Business was done in Raws CIF U.K. for December shipment at 4/2½ per cwt. with further offerings.

On the 23rd ulto. Raws were reported at 4/3 for December shipment with further buyers thereat.

On the 27th ulto. the market was firmer on the report that an agreement had been come to between Homegrown interests and Refiners to regulate supplies. Raws were done at 4/3¾ CIF London for December with only scanty offerings.

Closing buyers prices on London Terminal Raws market were:—

		MARCH	MAY	AUGUST	DECEMBER
November 19th	...	4/3	4/5	4/7	4/8½
,, 27th	...	4/5½	4/7½	4/9½	4/11½
December 1st.	...	4/5	4/7	4/9	4/10½

NEW YORK.—The only sale of Raws reported in the interval was on the 26th ulto. when sales of 15,000 tons of Cubans were announced at a price of 1.65 for December arrival but for use in January only. In view of the control by the Cuban Institute this sale is difficult to understand. Recent reports were that Cuba would ship to New York, a large quantity of Raws to fill the quota for 1934, and that arrangements were duly made for the storage etc. also the payment of duty. Later we learn that duty need not be paid on these sugars.

Generally the position in the New York market looks precarious unless some definite form of price control is arranged, owing to the stocks of sugars already shipped to that market and awaiting the turn of the year for disposal.

Raw Futures continued to sag during the second half of November but recovered slightly towards the close, and there is little change since the 15th ulto. as the closing prices quoted will shew.

		DECR.	MARCH	MAY	JULY	SEPT.
November 19th	...	1.86	1.79	1.82	1.87	1.93
,, 26th	...	1.75	1.72	1.76	1.81	1.85
December 1st	...	1.79	1.78	1.81	1.85	1.90

EXCHANGE.—Sterling continued steady during the period under review with no special features. Recently the rate for bills has declined and to-day's quotation for 3 days sight on London is F. 7.32½ per £ for delivery to March.

TEA

Exports

January 3, 1935.

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

The quantity of tea entered for export to the United Kingdom for tea first half of December, 1934, was: Calcutta: Black, 10,463,503 lbs.; Chittagong: Black, 2,202,890 lbs.

The quantity entered during the corresponding period last year was Calcutta: Black, 9,425,335 lbs.; Chittagong: Black, 4,691,028 lbs.

The total from April 1, 1934 to December 15, 1934 was Calcutta: Black, 137,556,089 lbs.; Chittagong: Black, 66,556,089 lbs.

Messrs. W. S. Cresswell & Co., have received by cable the following Board of Trade figures for all descriptions of tea for November:—

Imports

	1934. lbs.	1933. lbs.
Indian	31,000,000	35,641,000
Ceylon	7,750,000	9,136,000
China	2,750,000	823,000
Java etc.	4,000,000	4,317,000
Total ...	45,500,000	49,917,000

Home Consumption

	1934. lbs.	1933. lbs.
Indian	22,000,000	22,550,000

Java etc.	5,000,000	9,124,000
Total ...	46,812,000	47,767,000

Stock

1934. lbs.	1933. lbs.
281,000,000	269,324,000

The interim reports dated December 28, of the Finlay group of tea companies, London, state that Consolidated Tea and Lands, the largest tea producers, had a crop of 15,052,000 lbs. for export and 2,416,000 lbs. for the internal market. Export sales of 7,585,896 lbs. fetched 11.61d. per lb. and internal sales of 1,185,534 lbs. 5.50d. For 1932-33 10.38d. per lb. covering all sales was obtained.

The figures given below relate to the output and London sales to November 30; Deamoolie—output 945,820 lbs. against 921,920 lbs. in the corresponding period last year; Doom Dooma—3,643,200 lbs. against 3,615,120 lbs.; Pabbojan—1,685,280 lbs. against 1,712,000 lbs.; Rupai—784,800 lbs. against 781,280 lbs.; Tara—891,040 lbs. against 947,200 lbs. London sales were: Deamoolie—318,024 lbs. at 15.8d. against 307,656 lbs. at 19.6d.

MISCELLANEOUS

WHEAT

January 3, 1935.

Price movements are keeping on an erratic course on which the market closed before the holidays. On news of rain in the Punjab after a long dry weather prices eased by a couple of points to recover almost immediately. A strong bullish sentiment rules the market.

Lyallpur reports that stockholders and speculators availing themselves of the temporary decline indulged in rather extensive covering-in operations: but, apart from Beta, buyers have been in evidence and a good turn-over has taken place.

Despatches from Karachi have fallen off and holdings there are moderate.

Mills, both local and up-country, have generally maintained the extent of their purchases, thus creating confidence in the forward outlook.

HIDES AND SKINS

Calcutta, January 3.

The local raw hide market continues steady. Arrivals of wet hides have ceased. Decca dry-salted hides are quoted at Rs. 4 to Rs. 4-8, Darbhanga and Purneas at Rs. 4-4 to Rs. 4-8 and Kishenganj at Rs. 5 to Rs. 5-8 per 20 lbs. Raw skins show no alteration in prices.

Tanned buffalo hides are slightly easier against a steady demand, arrivals being on the short side and values declining by 3 pies per lb. Tanned cow hides registed a further advance of an anna per lb.

The following shipments of hides and skins were made from Madras during week ended December 21 :—

United Kingdom.
- 37 Bales raw goat.
- 23 Bales tanned buffalo
- 494 Bales tanned cow
- 32 Bales tanned cow calf
- 154 Bales tanned goat
- 74 Bales tanned sheep.

GROUNDNUTS

Calcutta, January 3.

After a decided decline in prices before the holidays Madras groundnuts recovered and latest cable advices from London report that sellers are demanding £11-6-3 for January loading. There are few sellers at the moment and dealers who have commitments are covering their requirements.

At Vizagapatam prices advanced to Rs. 9-12 per bag of 164 lbs. for machined kernels. Holders are asking Rs. 10 per bag of 164 lbs. for port delivery.

Owing to poor production and scanty arrivals in Madras Presidency there is little likelihood of the market going down, with a possibility of prices hardening in the near future. Bombay is absorbing most of the arrivals as there is a strong demand for ready goods and for February position in that market.

STATISTICAL INFORMATION

COTTON MILLS

The Mill-Owners' Association's Annual Statement for the cotton year ending 31st August, 1934, gives the total number of equipped mills in India 352 against 344 on 31st August, 1933. There is a net decrease of 3 mills in Bombay City and Island, owing to the sale or scrapping of the machinery in the Bomanji Petit Mills, the Framjee Petit Mills, the Jivaraj Baloo Mills and the Sewree Cotton Mills, and the addition of the Bhawani Cotton Mill. The number of mills in Ahmedabad remained the same at 82. The number of mills in the Bombay Presidency, exclusive of Ahmedabad and Bombay City and Island, increased from 60 to 62.

In Bengal the number of equipped mills is now 22 as against 19 last year, the Bangodaya Cotton Mills, the Basanti Cotton Mills and the Hooghly Mills having commenced work during the year. There was no change in the number of mills in the United Provinces, and Central India, but the number of equipped mills in the Madras Persidency increased from 28 to 32 as the Lakshmi Mills, Pankaja Mills, Sri Ramalinga Choodambika Mills and the Sri Satyanarayana Spg. Mill commenced working.

The opening of the National Cotton Spg. and Wvg. Mills in Delhi increased the number of mills in Delhi by 1. There was no change in the number of equipped mills in Mysore, Pondicherry, Burma, Rajputana, Central Provinces, Berar or the Punjab. Out of the 352 equipped mills in the country, 29 were completely stopped during the whole of the year to which the Statement relates. Of these 29 mills, 14 were located in Bombay City and Island.

Since the Statement was prepared, the number of idle mills in Bombay City and Island has decreased owing to the reopening under new ownership of some of the mills which were formerly under the agency of Messrs. Currimbhoy Ebrahim and Sons, Ltd.

SPINDLES AND LOOMS

The total number of spindles in the equipped mills of the country now stands at 9,613,000, an increase of 41,000 during the year. The total number of looms is 194,988, an increase of 6,000 during the year.

In Bombay City and Island, the number of spindles fell to 31.7 lakhs from 33 lakhs, and the number of looms from 73,000 to 70,000. In Ahmedabad, the number of spindles increased by 31,000 to 2,010,000 and the number of looms increased from 42,200 to 49,900.

In Bombay Presidency, exclusive of Ahmedabad and Bombay City, the number of spindles and looms increased by 27,000 and 2,800 respectively. In the United Provinces, the numbers of spindles and looms were respectively 640,000 and 9,100; the number of spindles is slightly lower and the number of looms is slightly higher than last year's figure.

In the Madras Presidency, there was an increase of 98,000 spindles and a decrease of 250 looms during the year, the total figures on 31st August, 1934, being 942,000 spindles and 5,300 looms. In the Central Provinces, there was no change in the number of looms, but a very slight increase in the number of spindles, the figures at the end of the year being spindles 308,000 and looms 5,723. In Central India the number of spindles increased by 12,000 to 325,000 and the number of looms by 432 to a total of 8,771.

In Bengal, the number of spindles dropped by 3,000 to a total of 330,000, but the number of looms increased by 1,000 to a total of 7,0000. In Hyderabad (Nizam's Territory) the number of spindles increased by 20,000 to a total of 1,24,308, and the number of looms increased by 1,100 to a total of 2,694. The changes in the number of spindles and looms in other centres of the Industry were insignificant.

The total paid-up capital of the Industry on the 31st August, 1934, amounted to Rs. 39,22 lakhs, a drop of Rs. 43 lakhs compared with last year. In Bombay City and Island, the total paid-up capital of the completely equipped mills fell by Rs. 66 lakhs to the figure of Rs. 13,31 lakhs.

TRADE OF BOMBAY

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of November, 1934, amounted to Rs. 12.75 crores, showing an improvement of Rs. 3.97 crores, or 45 per cent. and of Rs. 46.88 lakhs or nearly 4 per cent. over the figures for the corresponding month of the years 1933-34 and 1932-33, respectively. The improvement of Rs. 3.97 crores is due to larger shipments of treasure and to increased imports of merchandise and silver.

Imports of merchandise amounted to Rs. 4.54 crores, figures for November, 1933, and of Rs. 5.8 lakhs, or over 1 per cent. over those for November, 1932. The rise of Rs. 59.49 lakhs is chiefly due to larger arrivals of cotton piecegoods—grey and coloured (+over 12½ millions yards and +Rs. 20.83 lakhs), cotton, raw (+1,978 tons and +Rs. 18.15 lakhs), wool manufactures (+Rs. 7.02 lakhs), cotton twist and yarn (+over ½ million lbs. and +Rs. 5.85 lakhs), artificial silk piecegoods (+nearly 2 million yards and +Rs. 5.7 lakhs), metals—copper (+Rs. 5.65 lakhs), instruments, etc. (+Rs. 4.4 lakhs) and motor cars including motor wagons, cycles and parts thereof and dates (+over Rs. 3 lakhs each).

On the other hand, there was a noticeable fall in the imports of silk raw and manufactures (−Rs. 9.64 lakhs) and machinery and millwork (−Rs. 8.39 lakhs). Imports of kerosene oil also recorded a fall of over 2¾ million gallons in quantity and of Rs. 7.22 lakhs in value. Imports of gold amounted to Rs. 2.14 lakhs as against Rs. 2.43 lakhs and Rs. 9.03 lakhs and those of silver to Rs. 22.11 lakhs against Rs. 8.54 lakhs and Rs. 7.79 lakhs, respectively.

Exports of Indian produce amounted to Rs. 1.85 crores, showing a fall of Rs. 10.68 lakhs, or 5 per cent. from the figures for November, 1933, but a rise of Rs. 4.21 lakhs. or 2 per cent. over those for November, 1932. The fall of Rs. 10.68 lakhs is chiefly attributable to smaller shipments of seeds (−25,614 tons and −Rs. 30.06 lakhs), wool, raw (−nearly 1½ million lbs. and −Rs. 6.15 lakhs) and cotton twist and yarn (−over ¾ million lbs. and −Rs. 4.53 lakhs), though exports of cotton, raw were larger by 5,251 tons in quantity and by Rs. 25.44 lakhs in value. Exports of gold amounted to Rs. 5.45 crores, as against Rs. 2.53 crores and Rs. 5.74 crores and those of silver to Rs. 42.56 lakhs against Rs. 1,532 only and Rs. 3.17 lakhs, respectively.

Re-exports of foreign merchandise amounted to Rs. 24.21 lakhs, as against Rs. 23.83 lakhs and Rs. 16.67 lakhs respectively.

The trade statistics of the first eight months of the current financial years show, in imports, an improvement of Rs. 4.16 crores, or 13 per cent. over the figures for the same months of the previous year but a deficit of Rs. 3.82 crores, or nearly 10 per cent. as compared with those for the corresponding months of the year 1932-33. In exports, however, they show an advance of Rs. 2.58 crores, or 5 per cent. and of Rs. 2.04 crores, or nearly 4 per cent., respectievly, over the figures for the same period of the years 1933-34 and 1932-33. Imports of gold amounted to Rs. 26.18 lakhs as against Rs. 37.68 lakhs and Rs. 54.25 lakhs and those of silver to Rs. 42.5 lakhs against Rs. 32.23 lakhs and Rs. 94.19 lakhs, respectively.

GOLD STANDARD

The position of the Gold Standard Reserve for the quarter ending September 30 shows that there was an opening balance of £40,000,000 and the profit on investment was £210,275.

The form in which the balance of the Reserve was held was as follows :—

Cash at Bank of England £3,857; gold in England £2,152,334 and securities of estimated market value of £37,843,809.

The details of the securities are :—

British Treasury Bills £14,290,000; two per cent. British Treasury Bonds 1935-38 £8,325,000; 2½ per cent. British Treasury Bonds 1937 £3,375,000; 2½ per cent. British Treasury Conversion Bonds 1944-48 £1,250,000; Three per cent. British Treasury Bonds 1933-42 £292,100; 4½ per cent. British Treasury Conversion Bonds 1940-44 £6,150,000; Five per cent. British Treasury Conversion Bonds 1944-64 £1,000,000. Total securities £36,682,100.

EXPORT OF GOLD

Bar gold valued at Rs. 2,68,89,581, was exported from Bombay to Europe and America during the week ended Dec. 22. Large quantities were shipped and consigned to London, optional to New York, Paris and Amsterdam. The total gold export since Britain went off the gold standard now amounts to Rs. 2,12,05,90,138.

COTTON YARN

There was an increase in the quantities of cotton yarn and piecegoods imported into Bombay during October, compared with the previous month owing to considerably higher imports from the United Kingdom, according to the latest bulletin issued by the Bombay Millowners' Association.

The total imports of cotton yarn of all descriptions, amounted to 1.1 million lbs. as against one million in September. Of this the United Kingdom supplied 221,000 lbs. as against 156,000 lbs. in September; Japan 475,000 lbs. as against 417,000 lbs. and China 388,000 lbs. against 416,000 lbs.

EXSHAW is the BEST BRANDY

means advances stand at Rs. 9 crores showing an increase on the previous week of Rs. crores. Apparently, this is in contradiction of the expectation we raised last week that the Government would have no need to increase the ways and means advances during that week except to the extent of the requirements of the beginning of the month. But it should be noted that, though the Government have increased their ways and means advances from the Bank by Rs. 4 crores, Public Deposits show an increase of Rs. 2 crores over the figure of the previous week; so that the actual requirements of the Government during the week have not been more than what we estimated them to be. Nearly half of the increase in the ways and means advances was against the need for a later period, of which we were fully cognisant and to which we drew attention last week.

Government securities were a particularly dull market during the week. Rates for the most part kept near about Rs. 98-8; but with the increase in the stringency of money conditions, the rate sagged to Rs. 98-2; and there should possibly have been a set-back, but that London has been experiencing very active conditions in the giltedge market. For a great part of the week 3½ per cent. sterling was quoted near about par; and during the course of to-day advices have been received that at the close of Thurday's trading, 3½ per cent. sterling touched par. The firm conditions that ruled in London giltedge were responsible for the recovery of 3½ per cent. paper from the low level of Rs. 98-2 to the level of Rs. 98-8. But again inactivity set in under the pressure of stringent money; and the rates sagged. One may gather an idea of the present position of the market from the fact that, even in the face of the rise in 3½ per cent. sterling to par 3½ per cent. paper has been quoted at the end of Friday's trading at only Rs. 98-6. Not only is the quotation lower, but the market reports little or no business. It is strange that so soon after the hectic rise at the end of last year, giltedge should relapse into its present state of inactivity and low prices. Much of the gains of that period have now been lost. In the first place, the sterling scrips have again been given the lead over the corresponding Rupee securities. For while 3½ per cent. sterling is quoted at par 3½ per cent. Rupee paper is well below the level of Rs. 98-8; so that there is a difference of more than one and a half points between sterling and Rupee securities.

Though, doubtless, one might mention a number of points which in their cumulative effect can explain to a large extent the setback that has occurred in giltedge, the main reason must be sought in the new activity which has developed of late in the stock exchanges. So far as Calcutta at any rate is concerned, virtually boom conditions prevailed, and the jute section particularly has afforded the fullest scope for those sections of investors and operators who had begun to feel that giltedge compares less favourably with jute shares whether for investment or for speculative purposes. But it should not be supposed that the new activity is confined to the jute section. Even miscellaneous industries have experienced a large turnover during the latter part of this week. So far as the jute section is concerned, there is ample reason for the new activity in the stabilisation of the bullish outlook, through the Government's announcement of the exact percentage of the restriction which they would recommend to the cultivators of the raw material in Bengal. It is well-known that for sometime, there was a serious uncertainty about the position, owing to the belief that the consuming interests were trying to persuade the Government to declare a very conservative figure of restriction of the jute crop. The Government of Bengal have shown grit in coming to the decision that a 5 as. restriction of acreage should be accomplished. This clearly means that the price of jute would not suffer any lasting setback; and it follows, therefore, that jute goods will command a high lasting level of prices during the coming year. When it is considered that jute mills have good quantities of jute with them, and that, even if they are to buy at higher levels there is bound to be a wider margin of profit than has been hitherto available, it will be seen that the activity that has been witnessed during these months in the jute section is only too natural. It may be said that all this activity in jute, with its infectious spread to the other sections of the exchange has affected the course of giltedge prices adversely.

The exchange market has shown little or no change in rates. Sellers are still offering 1s. 6 1/16d. Banks will sell February-June at 1s. 6 1/32d. There are buyers at 1s. 6 3/32d. for ready or January, 1s. 6 1/16d. for March 15, 1s. 6 3/64d. in interbank for April and 1s. 6 1/32d. July-August. Bill rates are 1s. 6 5/32d. for a month, 1s. 6⅝d. for February 15 to July.

Call money was quoted at 3½ per cent. One and two months deposits quoted 2 per cent. and 2½ per cent.

IMPERIAL BANK OF INDIA

Half-year Results

We are informed that the Governors of the Imperial Bank of India at the Meeting of the Central Board held at Calcutta on Friday, the 11th instant, declared a dividend to shareholders for the half-year ended 31st December, 1934, at the rate of 12 per cent. per annum, payable on and after the 21st January, 1935.

The profits available including Rs. 31,13,300 brought forward from the previous half-year, amounted approximately to Rs. 72,66,200 which sum was disposed of as follows:—

	Rs.
(1) Payment of a Dividend of 12 per cent. per annum (Free of Income-Tax)	33,75,000
(2) Transferred to Reserve Fund ...	7,50,000
(3) Transferred to Pension Fun ...	76,000
Carried forward to next half-year	30,65,200
Total ...	72,66,200

The average rate for Demand Loans during the half-year was 3-5.

1677

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

Thursday evening.

The fluctuations in the principal exchanges have been confined during the week within narrow limits. The sterling-dollar rate is nearly the same at the end as at the beginning of the period under review. The sterling-franc rate shows, however, a distinct rise from 74.15 to 74.34. Despite this difference, it may be said on the whole, that international exchanges have kept steady. There have been little or no upset of a serious character and that as these conditions have continued for nearly a fortnight, one might even suggest that there is now a lull. It has been our theme in the last few months that there can be no peace in international finance so long as these disparities of the principal currencies continue.

It requires no elaborate analysis to see the strong under-currents that flow beneath the placid surface. The troubles and the problems of the gold standard currencies are wellknown to readers of these columns. It is also a matter of common knowledge that the monetary authorities in America cannot rest on their oars and they have yet some crucial problems for solution. At the moment, it seems to be well understood in the United States that the interest of America lies in allowing the European Gold Bloc countries to continue on their present parities as long as possible. But the question of a further devaluation of the dollar is gaining more and more importance. Since September last, significant changes have occurred over the monetary outlook in the States. In November last Mr. Roosevelt woke up for the first time to the necessity of placating investors by refraining from loud proclamations of his inflationary policies. The changes in the structure of the N. R. A. and its immediate aims also presaged a temporary quietus to the inflationary programme of the Government. It is significant that at a certain stage it was even believed on both sides of the Atlantic that Washington and London had drawn closer than ever before, and that actually there had been *pourparlers* between the two governments with a view to the conclusion of a stabilisation agreement. These rumours had not a long time before them ; for they were effectively denied. And even at the time that they were gaining currency, the movements in the ilternational exchanges were not exactly a confirmation of them. But all the same these rumours were an index of the extent to which America had moved away from the position of having to change the value of the dollar.

But those conditions are now a thing of the past. It can no longer be said, even with the semblance of reason, that existed formerly, that America has abandoned the idea of further inflation. The election of a New Congress has made a serious difference in the internal politics; and it is feared that, in order to avoid more extreme courses, the President might even give in to the demand for inflation up to the present statutory limit. It is obvious that no definite ideas can be formed in this regard, but there is one view only in which a further devaluation of the American dollar may even be said to be welcome. For such a devaluation would force the hands of the gold standard currencies which, in the face of odds and the most conclusive arguments in favour of devaluation, still cling to their over-valued currencies. It might be said that the privations of deflation are suffered only by the countries concerned and that, the outside world even stands to benefit from the continuance of the present parities of the gold currencies. It is true that Britain and America and the countries on the sterling group stand to gain a great deal by France, Italy, Belgium and other members of the Gold Bloc continuing to set their face against devaluation. But from the standpoint of the future of world trade and finance, the differential advantages which the off-gold countries gain at the expense of the on-gold countries, have no importance. Nothing but the restoration of an international monetary system guaranteeing a certain degree of stability of world prices and facilitating the smooth exchange of goods and services matters. As things are, there seems to be comparatively little chance of the Gold Bloc countries deciding of their own accord to devalue their currencies. They are not prepared to bend before the storm. And it is certain that with this attitude the storm will not be averted.

We referred last week to the hopes which are entertained by the gold countries that there will very soon be a revival of world prices and that, this rise would obviate the necessity of further deflation. We also showed that such hopes of a rise in the general level of world prices are altogether forlorn and that there is no prospect of the gold standard countries being saved from their present dilemma of devaluation and deflation. The continuance of the gold standard currencies in their present position would mean that all the important countries in the world will postpone indefinitely the consideration of the question of stabilising their currencies and restoring some organic relation between the world's principal exchanges. So far as Great Britain is concerned, she has every reason to feel satisfied with the management of her monetary affairs during this period of crisis. It is only recently that Mr. Neville Chamberlain, the British Chancellor of the Exchequer, declared that Britain cannot think of stabilising sterling, so long as the disparity between the franc and the dollar continues. As the centre of the sterling area and as the entrepot of world trade, London's attitude is of vital importance to the future of gold currencies. There can be no hope of restoring our international monetary order so long as the conditions of world finance do not permit her to restore a stable link between sterling and gold. But it should not be forgotten at the same time, that British opinion has advanced a great deal from the end of 1932, when conditions were such that Britain demanded, for her return to the gold standard, conditions which were impossible of fulfilment except by an agreement among all nations acting together in concert. While formerly, Britain virtually asked for a solution of all the problems of depression as a condition precedent to her return to the gold countries, now she is content only to demand that the present disparities between the dollar and the franc should be removed. If it is granted that the stabilisation of sterling is nearly equivalent to the restoration of an international monetary order, then it will be seen that in the fate of the franc and the gold currencies lies the key to the solution of all the monetary problems.

As already observed, there is still no sign that the French Government have relaxed their determination to preserve the gold standard at any cost. Our Overseas columns this week refer to the troubles of the Citroen Company and the manner in which the disastrous effects of the present deflationary policy have been brought to the notice of the people. It is still too soon to say whether incidents like this will spur the French to bring pressure on the Government and persuade them to change their monetary ways. It is even doubtful whether the French

INDO-BRITISH TRADE PACT

The terms of the Indo-British Trade Pact, which was known for a long time to be under negotiation, have been announced towards the week-end. The public has had an inkling of their contents from the reports which trickled through to the press during the last two weeks. Although, for this reason, the Agreement does not contain any surprise, it, nevertheless, calls for serious consideration and careful appraisement. In our last comment on this question we referred to the fact that the origin of this Agreement and the manner in which it had been negotiated were calculated to arouse disquietude in the public mind. For, as is well-known, the impetus for this understanding comes from an agitation set afoot by the Lancashire textile cotton industry which considered that it was high time that its place in the Indian export market should be carefully regulated by an understanding between the Governments of Great Britain and India. And Lancashire rightly based this demand on the discussions at the time of the conclusion of the Ottawa Pact and the hopes which the Government of India raised at that time by their recognition of the importance of cotton piecegoods in Britain's export trade. No one can gainsay the justice of Lancashire's demand that a trade pact between Great Britain and India should include the place of Lancashire in India's import trade. But the references to this question in the course of the debate in the House of Commons gave rise to the suspicion that in the conclusion of this Pact political pressure, such as it was in Lancashire's hands to exert, might be brought into play.

* * *

So far as we are able to see in the short time that is available for examining the terms of this treaty, it does not hold out to Lancashire any tangible gain that would not have flowed in the ordinary course of events, as it runs at present. This is obviously not to say that it does not effect any change in the present position and that India has no reason to protest against such a Pact.

* * *

The new understanding takes the form of a supplement to the Ottawa Agreement and has been signed by Mr. Walter Runnciman on behalf of His Majesty's Government and by Sir B. N. Mitra, the High Commissioner, on behalf of the Government of India. The former is obviously in deference to the views urged by the representatives of Lancashire and the signing of the Pact by Sir B. N. Mitter is a concession to Indian sentiment, which cannot weigh much with those who examine the Pact from the purely economic standpoint. The report, so far to hand, comprises the notes which were exchanged between Mr. Walter Runciman and Sir B. N. Mitra and seven articles of the new Pact, of which only the third article contains four subsections. The report that was received sometime ago suggested that the new Pact would not prescribe any definite import duties, but would only lay down a few governing principles. But it is not wholly true to say that the Pact contains only a few guiding principles. In the first place, these guiding principles are binding on the contracting parties; and secondly, the Pact also contains certain definite undertakings. There can be no doubt that the Pact is not on a par with some international pacts which are pious expressions of opinion with little or no influence on future policy. One may be sure that the effects of the Pact would be fully felt in the fiscal policy of India in the immediate future, and the new budget will contain proposals directly traceable to this Pact.

* * *

It is, therefore, necessary to examine carefully the terms of this understanding. The Preamble states that His Majesty's Government and the Government of India agree that the undertakings of this Pact shoud be deemed to be supplementary to that agreement. The whole Pact is based on the recognition by both governments of the fact "that, while protection to Indian industry against imports of whatever origin may be necessary in the interest of the economic wellbeing of India, conditions within industries in India, in the United Kingdom and in foreign countries may be such that Indian industry requires a higher level of protection against foreign goods than against imports of United Kingdom origin." And the Agreement, therefore, represents an attempt on the part of Great Britain to secure for herself the advantages of this position. One would think that such advantages should be available to Great Britain in the normal course without calling for any special efforts on her part or any special undertakings on the part of the Government of India. For there is no reason why India should subject Britain goods to the same rates of duty as the foreign goods, unless it be that India is actuated by malice against Great Britain. Even if there were such malice in the minds of politicians in this country, its freeplay will be effectively checked by the safeguards contained in the new constitution, and there can be no doubt that the new Pact will be in force only during the period of the reforms.

* * *

While this line of argument is, on the whole, valid, there are two obstacles in the way of Britain securing these advantages. One is the need of Indian industry for protection, and the other is the need of Government for revenue. In the present conditions Indian industry requires protection not only against the systematic competition of established foreign rivals, but also the unsystematic competition known as "dumping." Protection against dumping is technically known as "safeguarding"; and both safeguarding and protection might, it is believed, well stand in the way of Britain reaping the advantages of a position in which Indian industry requires more protection from foreign rather than from its British competitors. Likewise, the Government depends a great deal for its revenues on import duties; and though from the standpoint of protection differential duties may be permissible, the exigencies of the Government's finances might require a comparatively higher level of duties on British goods.

* * *

It is such a position that the Agreement seeks to tackle. So far as revenue considerations and considerations of safeguarding are concerned, the Agreement does not seek to impose any restriction on the Government of India. By Article II His Majesty's Government recognise that "under the existing conditions, import duties constitute an indispensable element in the revenues of the Government of India and that revenue considerations must be given due weight in fixing the levels of import duties." And likewise, it

is mentioned in Article III that "this undertaking shall not apply to safeguarding industries under the Safeguarding Act, 1933."

* * *

It follows, therefore, that the Agreement purports, in the main, to regulate the protectionist policy of the Government of India in such a way as to minimise its unfavourable reactions on British Industry. Broadly speaking, the Agreement is only an embodiment of the principles to which Great Britain gained the acceptance of the Dominions in the Ottawa Pact. It will be remembered that the Dominions were brought round to agree that protection shall be accorded only to those industries which have reasonable prospects of success; that no protective duties shall be imposed except after due enquiry by the Tariff Board; that a Tariff Board shall be set up in countries in which it had not been set up already; and that British manufacturers shall have the right of appearing before the Board and presenting their case in all matters in which they are concerned. Similar principles are now applied to India, but with a few significant additions which we shall presently point out.

* * * *

By Article III "the Government of India undertake that protection be afforded to such industries only as after due enquiries by the Tariff Board, have in the opinion of the Government of India, established the claims thereto." And in sub-section II of the same article they further undertake "that the measure of protection to be afforded shall only be so much as, and no more than, will equate the prices of imported goods to fair selling prices for similar goods produced in India." It is added that "wherever possible, having regard to the provisions of this article, lower rates of duty shall be imposed on goods of United Kingdom." And sub-section III further stipulates that such "differential margins shall not be altered to the determent of United Kingdom goods."

* * *

It is difficult to understand the *raison d'etre* of these additions. If it is laid down that the measure of protection shall "only be as much as, and no more than will equate, the prices of imported goods," and if it is true, as is assumed, that British costs of production are generally higher than those of Japan or other foreign nations, the differential margins are inevitable and special provisions in this regard are hardly called for. By the same token, no alteration to the detriment of United Kingdom goods will be found to be necessary unless prices of British imports go down, and the margin of protection to Indian industry dangerously narrowed. In such a contingency, an alteration would be only in accordance with the principle of levying only the minimum duties necessary to equate the import price and the fair selling price. It is impossible to think that the authors of the Agreement did not think of these; and the Indian public can only suspect that the aim of the Pact is to render possible more advantage for British than mere differential duties justified by differential costs among foreign competitors,

* * *

The uneasiness which these stipulations arouse is further enhanced by Article IV of the Agreement, which not only recognises the right of British manufacturers to appear before the Indian Tariff Board, during its examination of claims to substantive protection, but also contains an undertaking of the Indian Government that in the event of "any radical changes in the conditions affecting protected industries during the currency of the period of protection, they will, on the request of His Majesty's Government, or of their own motion, cause an enquiry to be made as to the appropriateness of the existing duties from the point of view of the principles laid down in Article III and that, in the course of such an enquiry, full consideration will be given to any representations which may be put forward by any interested industry in the United Kingdom."

As we have said already, we cannot, and do not, demur to the right of foreign manufacturers to appear before the Indian Tariff Board. But it is hardly reasonable that the Government of India should be bound to institute a Tariff Board enquiry at the instance of His Majesty's Government. If the "radical changes" are such as to affect the prospects of the Indian industry, it may be presumed that the Indian Government will take the necessary action of their own accord. But if, on the other hand, the changes affect only the British import trade, the utmost that His Majesty's Government can expect is the right to make representations to the Indian Government. It is strange that the Government of India should have undertaken so readily to institute a costly Tariff Board enquiry at the instance of His Majesty's Government and for reasons which can have no close connection with the interests of India.

* * *

Such in brief are the principles laid down in the new trade Pact. The last three articles refer to the import of Indian cotton and pig iron into the United Kingdom and to the imports of the manufactures thereof from Great Britain. Article V makes such reference to the steps that have already been taken in the United Kingdom to widen the consumption of Indian cotton; and His Majesty's Government undertake to continue the use of all possible efforts to stimulate the consumption of Indian cotton in all possible ways. Article VI closely relates to the free entry of Indian pig iron into the United Kingdom, to the continuance of the iron and steel duties at the levels prescribed in the Iron and Steel Protection Act of 1934. Article VII provides for a favourable consideration by both the Government of all agreements and conclusions that may be framed as a result of the conference between the accredited representatives of the industries concerned in both countries. In other words, it is a recognition of the need for official ratification of Pacts like the Mody-Lees Pact.

* * *

Though the terms of the Agreement have been drawn up in general terms, the interests of the British cotton industry have been given pointed reference to in the letter of Sir B. N. Mitra to Mr. Walter Runnciman, in which he says that as soon as there is a removal of the surcharge on a reasonably large proportion of, if not necessarily, all items subject to it, the tariff rates on United Kingdom cotton piecegoods will be reduced to 20 per cent. *ad valorem* or 3½ annas per pound on plain grey goods and 20 per cent. *ad valorem* on other goods. This provision leaves little room for doubt that in the new budget the Government of India will make the best endeavour to accommodate the requirements of Lancashire in the Indian market.

* * *

An attempt may now be made to balance the concessions exchanged between India and Great Britain in the present trade Pact. So far as the reduction in the duties of cotton piecegoods from the United Kingdom are concerned, the only advantage that Britain has to offer is the undertaking which Mr. Walter Runciman has agreed to on behalf of His Majesty's Government that "if at any time any further or other special steps are taken by the Colonies and Protectorates to facilitate the sale of United Kingdom cotton goods in competition with foreign cotton goods, they will invite Governments of Colonies and Protectorates to accord as favourable treatment to Indian cotton goods of any

"Indian Finance"

description as may be proposed for similar United Kingdom cotton goods." With this dubious advantage may be coupled the promise to stimulate the consumption of Indian cotton by propaganda, including technical research, commercial investigation and market liaison. It is yet too early to appraise the extent of the advantages that might flow from a promise of this kind. It is true that during the short period in which Great Britain has attempted to increase her consumption of Indian cotton, encouraging results have been obtained. But the difficulty in this matter is not so much the sincerity of Lancashire as that the experiment is bound to react to the disadvantage of India, if Lancashire should seek a large outlet for such manufactures in India itself. Unless it is clearly realised that the output of Lancashire will have to be disposed of in other countries than India, India will be a loser and not a gainer by the exports of her raw cotton to the United Kingdom. The mention of the Protectorates and Colonies in this connection is an encouraging circumstance ; and it is to be hoped that what time Britain is increasing her consumption of Indian cotton, she will also try to expand the markets for her cotton piecegoods in other parts of the Empire than India. So far as the principles enunciated in the first four articles of the agreement are concerned, we have already pointed out that either they are not called for or that there must be underlying them a deeper significance which it is difficult to regard with equanimity. We may concede the validity of soundness from the standpoint of international trade relations the principles enunciated there, namely, the equation of import prices and fair selling prices and the differential rates of import duties according to the differential costs of foreign competitors and the right of foreign manufacturers to make representations to the Indian Tariff Board. And so long as the right of the Government of India to alter the duties according to the exigencies of Finance, or according to the requirements of safeguarding are respected, there is, indeed, no danger which Indian interests need apprehend.

* * *

But by seeking to tie the hands of the Government of India, the Pact will give rise to serious misapprehensions ; and it will depend a great deal on the Government whether the Pact be going to be the source of more friction or whether it is to mark another stage in the growth of a spirit of co-operation between Britain and India in the sphere of trade and industry.

INDO-BURMA TRADE RELATIONS.

Representatives of the Federation of Indian Chambers of Commerce, Associated Chambers and of Bombay and Ahmedabad Millowners were invited this week by the Commerce Member of the Government of India to elicit the views of commercial and industrial interests in regard to the Indo-Burma Trade Convention the conclusion of which is one of the recommendations of the Joint Parliamentary Committee It is futile at this stage to go into the broader question of separation of Burma, because the issue has been decided by the Report, and neither the feelings of the Burmans as evinced by the anti-separationist majority nor the interests of India are likely to alter the issue of separation. The only question which it might be useful to examine is the Trade Agreement between India and Burma on the one hand and the disabilities sought to be imposed on Indians in Burma on the other. It is somewhat of a paradox that, while the authors of the J. P. C. Report want Burma to be a separate unit politically, they want also to retain for Burma as many features of the fiscal policy of India as would suit Burma and the British interests in India. It is interesting to note that those, who urged the fiscal policy of India with its high tariffs as an argument for the separation of Burma, are now keen to preserve the *status quo* which would necessarily involve the same tariffs and fiscal policy for Burma as for India. This is a significant comment on the economics of the separation of Burma. The British interests in India cannot have the best of both the worlds.

* * *

The J. P. C. Report recommends that in order to secure the object of free trade between India and Burma, an agreement would have to be operative from the moment of separation and must, therefore, have been concluded before the new Governments are established, *i.e.*, between the existing Governments. They propose, therefore, that statutory provisions should be embodied in the new Constitution Acts and suggest that, if the two Governments of India and Burma cannot agree mutually to a scale of customs duties in this respect, it would be determined by His Majesty's Government in default of agreement.

* * *

Let us briefly review the present trade position between Burma and India. Roughly speaking, Burma exports to India rice, timber and oil and imports coal, yarn, piecegoods, tobacco, grain, pulse and flour. Other articles of import are not of any considerable volume. According to the Report itself, out of a total export of Rs. 56 crores from Burma goods worth nearly 28 to 29 Crores of rupees are exported to India. As regards imports into Burma, out of a total of Rs. 28 Crores in normal times, about Rs. 10 Crores worth of goods are imported from India. This represents 5½% of the total exports from India. The Report then goes on to observe: "Thus the Indo-Burma trade constitutes nearly half of Burma's export and import trade and an appreciable portion of that of India and it is clear that the heavy duties of the Indian protective tariff might have a serious effect upon it." The concluding phrase in the above quota-

HEAD OFFICE :—30, CLIVE STREET,

CALCUTTA.

tion is significant and suggests the reason for the insistence on a free trade agreement at present. It will also be observed that the exports from Burma are nearly 2½ times more than the imports into Burma from India.

The following figures of exports and imports of Burma and from India also tend to emphasise the same point:—

	Average for three years 1929-30 Lakhs Rs.	1932-33 Lakhs Rs.	1933-34 Lakhs Rs.
EXPORTS:—			
Private Merchandise ...	2,460	2,707	2,429
IMPORTS:—			
Private Merchandise ...	1,244	959	931

As against these, exports and imports of Burma to and from foreign countries are as follows:—

	Average for three years 1929-30 to 1931-32 Lakhs Rs.	1932-33 Lakhs Rs.	1933-34 Lakhs Rs.
EXPORTS:—			
Private Merchandise ...	3,157	1,922	1,743
IMPORTS:—			
Private Merchandise ...	1,612	1,070	856

It will be seen from the above figures that during the last two years Burma's exports to India have exceeded those to foreign countries. The figures of exports to India are an eloquent testimony of Burma's dependence on India as a market.

The following table shows the value and volume of Burma's export trade in the principal commodities exported to India for the year 1933-34:—

	Exports to India. Tons.	Rs. Lakhs.	Exports to foreign countries. Tons.	Rs. Lakhs.
1. Mineral Oils ...	715,830	1,462.60	...	...
2. Rice husked and unhusked ...	1,788,914	1,059.30	1,526,689	841.77
3. Wood and Timber ...	154,762	182.73	25,121 (Teak)	57.93
4. Grain, Pulse and Flour ...	64,021	38.28	4,783	13.43
5. Fresh Vegetables ...	...	28.61	...	...
6. Paraffin Wax and candles ...	2,268	11.93	49,424	209.39

It will be clear from the figures given above that India is the only consumer of mineral oils, an industry controlled by British interests. In rice also the British have a predominant interest while the timber industry is mainly controlled by the British. It is, therefore, evident that the application of the existing tariffs to Indo-Burma trade would severely hit the British commercial interests.

* * *

It is necessary to consider how India's trade with Burma would be affected by an imposition of existing duties on articles imported by Burma from India. The important items of export are gunny bags ,coal yarn, piecegoods, grain and flour. As regards gunny bags, India has got a monopoly; and even if an import duty is levied on that article by Burma, it will only fall on the consumers in Burma. As regards yarn and piecegoods, the protection that might be given by the adoption of a free trade policy would be largely illusory in as much as Burma would have the right to readjust tariffs in regard to imports of fasimilar articles from third countries. Lancashire is sure to contend that the consumers of Burma would suffer unless the import duty on British piecegoods was reduced. As regards coal, the trade returns show that from 1929-30 to 1933-34, the exports have slowly gone down from 7,38,000 to 2,39,000 tons. Burma needs this cheap Bengal coal which is in its vicinity although it is true that, if a prohibitive duty is levied on this article, South African coal aided by its Government would take advantage of it. It might be added that Burma has so far been entirely dependent upon India, as Bengal coal has been found to be cheapest and the best for Burma's requirements. As regards other articles, a small duty is not likely to affect the exports from India into Burma.

* * *

Now let us take the imports into India from Burma. As stated above, three important articles are exported into India from Burma, namely, rice, timber and petroleum or mineral oil. As regards rice, 17,88,914 tons, according to official figures, were exported from Burma to India in 1933-34 as against 15,266,80 tons to foreign countries. The value of this trade with India amounted to over Rs. 10 Crores and a little under Rs. 8½ Crores with foreign countries. As rice is being grown in Java, Italy, Spain and other countries which have been importing Burma rice, the only sure steady market for the rice of Burma is India. Burma will, therefore, stand to lose considerably if India stopped taking its rice or raised its import duty against the imports of rice from Burma. We need not refer at length to the growing feelings in Madras and Bengal that they should not allow Burma rice to be dumped into those Provinces. Last year India imported nearly 4,00,000 tons of rice from Bangkok and Saigon; and even if the rice grown in India were not sufficient for her requirements, cheaper rice could be imported from other alternative sources. The revenue derived from rice by Burma Government is nearly Rs. 8 Crores; and if the agricultural operations were to contract owing to Burma losing its Indian market for rice, Burma would fare very badly.

The next article of export from Burma is mineral oil including petroleum. 7,15,830 tons representing a value of nearly Rs. 15 Crores were imported into India in 1933-34. India can buy this mineral oil from other countries or develop its own mineral resources in Assam and elsewhere. But it would be difficult for Burma to find another market for its oil like India. The third important article of export is wood and timber. In 1933-34 1,54,762 tons representing in value Rs. 1,82 lakhs were imported into India while 1,25,125 tons representing in value a little over Rs. 57 lakhs were exported to foreign countries. Again it would be difficult for Burma to export all its surplus teak to foreign countries if it lost the Indian market while India can develop its own timber industry. It will, therefore, be clear that Burma cannot afford to lose the Indian market for its export trade; in other words out of an export trade of about Rs. 28 to 30 Crores, these three articles represent nearly Rs. 27 Crores.

* * *

Two further points need to be emphasised in this connection. India will lose nearly Rs. 3 Crores by way of revenue owing to the separation of Burma from India. Sir George Schuster in his recent broadcast speech stated that the Select Committee's estimate of losses of £2,200,000/- was considerably higher than the latest estimate of the Government, but it is obvious that the loss will be a heavy one. It is more than probable that the deficit in Indian finance after separation will partly have to be made good by duties on articles imported into India from Burma. A free trade agreement would deprive the Government of India of these sums of revenue and would involve raising of additional taxation from the people of India as a consequence of the separation of Burma. If Burma desires to be separated, as the Report alleges, it is for Burma to pay for it and not to make the Indian taxpayer pay for its autonomy. In any case, India will have to make up this heavy loss in revenue and the question deserves the careful consideration of the financial authorities.

* * *

In the second place, it should be specially noted that Burma will have the right to adjust her tariffs as regards imports from third countries which would adversely affect the prospective and growing Indian industries finding their natural market in their neighbourhood, *i.e.*, in Burma. British Commercial interests may not object to this right being conceded to Burma, but the Indian interests are naturally apprehensive of such a power being granted to Burma as they realise that this would affect the Burmese market for India's manufactures such as yarn, piecegoods, iron and steel, cement, sugar, coal etc.

* * *

The Indian interests cannot consider the question of the proposed Trade Convention irrespective of the serious political disabilities which are proposed to be imposed on Indians in Burma. They have before them the example of Kenya which was developed by Indian efforted and in which Indians were pioneers, in which they are now being discriminated against and treated as an inferior class of citizens. It is not necessary to dwell at length on all the various disabilities against which the recent All-Burma Indian Conference protested. But it might be pointed out that the right of entry of Indians into Burma is to be restricted not only in respect of labour but in respect of all Indian nationals. Paragraph 473 of the J. P. C. Report states: "It is accordingly proposed that it should be competent for the Burma Legislature to enact legislation restricting or imposing conditions of entry into Burma irrespective of all persons other than British

(*Continued from page 75*).

public opinion, formed largely as it is by the interests and reforms of the small class, will be changed by the sight of companies like the Citroen getting into serious difficulties on acount of the loss of their export markets. If, then, there is to be no voluntary change of opinion in France, one can only trust to the necessities of the situation to wreak their inevitable change. The question has been optly posed by a writer in the *Financial News*, who asks whether history will repeat itself and whether we shall witness in the course of 1935 developments similar to those of 1931, when Great Britain was forced off the gold standard by the inexorable pressure of events. It is possible that France will give up the game of maintaining the gold standard if the present disparity between the franc the dollar were to be enhanced by America deciding on a fresh dose of devaluation to the dollar. If such a course should come to pass, the task of bridging up the difference by deflation or by a process of a natural rise in the world level of prices, will be beyond all human endeavour and there might be a volutary, instead of a compulsory, abandonment of the gold standard.

Dewar's "White Label" Whisky

Clive Street Gossip

Dewar's "White Label" Whisky

Though Eavesdropper has arrived at Bombay and is actually on dry land, he is strangely silent, and it is apparently the turn of the poor stop-gap to be at sea. Last week I expressed the hope, which was as fervently entertained by the readers of these columns as by me, that I would be relieved of the responsibility of purveying the usual two columns or more of gossip and that the role will be played more appropriately by Eavesdropper himself. But that is not to be ; and there is still a week between Eavesdropper and his readers. Happily, I have not to complain about the lack of theme. There is, perhaps, nothing more appropriate to Clive Street Gossip than a discursive treatment of Clive Street's main interest and even sole pre-occupation, namely, the fortunes of jute and the jute industry. It is some years now since jute lapsed into a state of well nigh chronic depression. Owing to the combination of a vareity of circumstances, only a few of which may be said to be under human control, the fortunes of the jute and the jute industry have been at a low ebb. The economic depression in other parts of India and the world are attributable to different factors and various forces at work. But in Bengal it has always been possible to sum them up in the one word, jute. But the concentration of Bengal's economic problems in jute has not made it any the easier for the Bengal Government or the Jute industry to lift the economic depression sooner than other provinces or countries have been able to. For one thing, the jute industry has been in the hands of people, who have been brought up in the traditions of British business of earlier days ; and they have always looked askance at the idea of state interference to any large extent in the affairs of private industry. They had clung to the belief that it should be possible for the jute industry to solve its own problems. The change in opinion to which we shall owe the change in the economic fortunes of Bengal was brought about by the necessity which the Jute industry felt two years ago of approaching the Bengal Government in a matter of the utmost concern to itself, namely, the restriction of working hours and production in the various mills situated in Bengal.

I would not be far wrong if I say that, but for the opposition put up by the Association and non-Association mills and the consequent necessity of Clive Street having to call in the Government House to interfere in its internal affairs, we should still be as far from Government propaganda for jute restriction as we were before the years of the depression. The crisis that developed in the Jute industry as a result of the wranggles between the Association and the non-Association mills has proved to be a blessing in disguise. It was only owing to the efforts of Sir Anderson that the jute industry could come to a settlement about working hours. It has not, therefore, been possible either for Clive Street or Writers' Buildings to harp longer on the wornworn out strings of *laissez faire*. But the Government of Bengal retained for a long time a degree of scepticism in the feasibility or the wisdom of attempting to bring about restriction of jute through the endeavours of the state. It was not till the Government woke up to the close connection between the fortunes of the jute industry and their own finances that they began to concede the necessity of improving the position and the prospects of jute. But once this position was reached, it was inevitable that Government should gradually come to recognise the necessity for the State putting forth its utmost efforts to bring about restriction of the jute crop.

It is still difficult to find the reasons which impelled the Government of Bengal to recognise the relation between the production of jute and the economic and financial welfare of this province. If I might hazard a conjecture in this regard, I would suggest that it is the strictures of the Central Government on the financial position of Bengal and their insistence on the provincial Government putting their house in order as early as possible that opened their eyes and spurred them to a sense of their duty to the staple industry of Bengal. I do believe that if it were possible for the Government of Bengal to continue to procure financial assistance from the Central Government by the kind of shock tactics comprised in a persistent annual deficit of two crores, then, the Government would have gone on merrily on their old game of reckless unconcern for the welfare of Bengal's agriculture and industry.

Whatever the exact reasons may be, the fortunes of this province turned when Sir John Anderson some months ago declared that it was in the interests of the Government themselves that they should do everything in their power to improve the prices of jute and that there was no means of bringing about such improvement except the restriction of the acreage under this crop. The hopes, which were then raised in the minds of the public, have, no doubt, their vicissitudes. But to-day we are in the happy position to state that, granted certain qualifications and restrictions which the Government have prescribed for themselves, they are doing the utmost that is possible for the cultivators of jute. It is not, I say, inconsistent with a genuine solicitude for the cultivators that the Government should fight shy of any form of compulsory restriction. Even when we in *Indian Finance* criticised the scheme of voluntary restriction we only urged that Government ought not to regard their ideas of voluntary restriction as the last word on the subject, and that they should be prepared to change their policies when the circumstances demand. We were also, let us confess, under the apprehension that behind the insistence on the principle of voluntary restriction there lay a sneaking deference to the consuming interests and that the Government were themselves afraid of the conse-

quences of a thorough scheme of restriction. All sections and parties in Bengal should now feel glad that these apprehensions have been set at rest. Not only have the Government mobilised their resources for the purposes of propaganda throughout the provinces, but they have also passed successfully through the acid test of sincerity, namely, the stipulation of the exact percentage of restriction which they would recommend to the cultivators to effect.

During the time this question of percentage was deliberated on by the authorities and the interests concerned, it was well known that the jute consuming interests recommended only a small percentage of 15. And *Indian Finance* was among the foremost to point out that such a low percentage would nullify all the wholesome effects of the propaganda which the Government had so far pursued and would push the jute industry back into the slough, from which it will take a long, long time to reclaim it. Knowing as we do the extent to which the big business can influence and shape the policies of Government and in saying that we do not suggest that it is of a sinister kind it was, indeed, a great thing for the Bengal Government to decide finally on a restriction of five annas in the acreage under jute. His Excellency, Sir John Anderson has laid the province under a deep debt of gratitude by deciding, in the face of influential disagreement if not opposition, that the production of jute in Bengal should be reduced by nearly a third. One can well imagine the difficulties that His Excellency must have encountered in coming to this conclusion. But those, who know the high personal qualities which His Excellency has brought into the administration of this province, will hardly feel surprised that in a matter so momentous to the fortunes of the Jute Industry and the cultivators of Jute, Sir John rose to his fullest height and came to the best conclusion that is possible. It would be only fair to refer in this context to the persistent efforts of the Honourable Nawab K. G. M. Faroqui to do justice to Bengal's agriculturists. In a sense, the Minister's task in this matter is even more difficult than that of His Excellency the Governor. As Minister in a Government not accustomed to defer to Indian interests, Mr. Faroqui should have felt no little difficulty in pursuading the Government to decide on a 30 per cent. reduction for jute. Let us hope that this goodwill and energy shown by the Government will soon bear fruit in the revival of prosperity in this province

---

I have to conclude on a note of gloom. After a protacted illness lasting over months, Mrs. S. Banerji, the 3rd daughter of Sir Rajendra passed away in the morning of January 7, at a premature age. At an age when a man hopes to spend the last years of his life in the peaceful and happy bosom of his family in the grateful knowledge, which Sir Rajendra no doubt possesses, of a noble life nobly lived, the untimely demise of a loved one has come to mar his otherwise untrammelled contentment. Those who have the privilege of knowing Sir Rajendra intimately know what a fond father he is. In the privacy of his home, gilded as it is, he is not the powerful magnate of Clive Street but a supremely loving and loveable man, full of doting solicitude for those he calls his own. Such a loss in the ranks of his dear ones is sure to weigh heavily with Sir Rajendra. And the fact that Mrs. Banerji was of a naturally loving and sweet disposition makes the sorrow more poignant.

We have all our cross to bear. But what consolation can we offer to old Sir Rajendra in his hour of affliction ? We can but hope that the patience and fortitude that has carried him rung by rung to the pre-eminence, where he now abides, may help him to bear his sorrow. And for Lady Mookerji, the sorrowing mother, we invoke a divine accession of strength to carry her through her hour of trial. May the departed soul rest in peace and may God, in His mercy, comfort the bereaved family.

(*Continued from page 91*)

subjects domiciled in the United Kingdom". Apart from the right of entry, Indians have several other objections such as in regard to legal restrictions for carrying on trade and professions, public service etc. while land alienation, representation of Indians in Burma, proposals regarding franchise, lack of facilities for education of Indian children etc. have also to be considered. The effect is that from the inception an inferior citizenship is to be created for Indians while the British subjects from the United Kingdom will be completely safeguarded. If British subjects can demand equal rights in India on the ground that they are British subjects and cannot be discriminated against, it is at least illogical to deny the same rights to Indians in Burma who are also British subjects. But this is simply a repetition of the treatment received by British Indian subjects all over the Empire including not only the Dominions but Crown Colonies under the Imperial Government. Indian Commercial interests, therefore, naturally demand that, if any Trade Convention is to be concluded it is Burma which is more in need of it than India; and since India is in a more favourable economic position, it should not agree to any Trade Convention until the disabilities on Indians are removed and until Indians are given the right of citizenship in Burma.

SOUTH INDIA

REVISION OF LAND REVENUE SYSTEM

(From Our Correspondent)

Madras, Jan. 9.

The New Year has opened rather dull in the South. Though, more than a fortnight has passed since these columns last appeared, there is still a paucity of news that is highly disconcerting. This is, perhaps, only to be expected. For, in this part of the country, there is little or no likelihood of those lightning developments which feed the correspondents from other cities. In the South, it is always a more even life, perhaps richer in essentials, but distinctly less spectacular. Our economic problems are not those that lend themselves to the tearing propaganda in which Bombay is often engaged. Nor do we have that formidable list of grouses with which Bengal seeks to emulate Bombay in the matter of propaganda. Development in the South are rather a matter of silent trends which one can detect only after careful study. The problems, such as they are, do not admit of any heroic solutions. It might be that, with a Roosevelt, the South, too, might have a spectacular recovery campaign. But with a subordinate branch of the British Government, one can only expect a prosaic course of investigation, report, and long deliberations over recommendations.

What the South wants now is a readjustment of her economic life. Land calls for an overhauling of the revenue system. There is comparatively little of big business ; and such as there is, ought to be specified with the protection that it enjoys in common with the rest of India. Small industries have their problems, and it must be said that of late there is a revival of interest in such small industries. One might depend on it that South India will reap the utmost benefit from the movement which Gandhiji has initiated for the reconstruction of village industries. For we have always shown the capacity to participate to great effect in all the constructive activities of the Mahatma. There is, above all, the question of a rise of agricultural prices ; and this calls for a number of measures which can bring about the desired change only in their cumulative effect.

But, on the whole, it may be that South India is gradually waking up to a sense of the importance of propaganda. The new legislation about the *Inams* has given rise to activity of an agitationist kind in all parts of the country. The merits of this question are well known to the readers of these columns. It is doubtful whether the Government will accede to the demands of the *Inamdars*. But what is important is that the landed interests have learnt to keep their grievances before the eyes of the Government and the public. The magic effect of propaganda is not in the soundness of the argument, but in the maintenance of the pressure of publicity. South India has lost a great deal in the past by omitting to learn the art of propaganda ; and if I were asked what is the most momentous development in the South during the last two years, I would unhesitatingly say that it is the recognition of the importance of continuing to agitate on all matters of public interest. I wager that within a short time the Government will have to recognise the strength of the demand for a scientific reform of the land revenue system.

It is but a most natural development. In the great economic depression agriculture has been harder hit throughout the world than industry. And amongst all agricultural staples rice is the worst sufferer. The rice-grower of the South is hardly in a position to pay his kist. He naturally demands the revision of land revenue and Government, one should say, was ill-advised to meet that demand in a grudging and illiberal spirit. As is well-known, they suspended a part of the revenue payments for sometime and then finally remitted it in respect of certain areas. But there was no escaping the demand for the remission of land revenue and all that the Government did was to effect a reduction of 12½ per cent. as against the widespread demand for 25 per cent. In the light of these developments, it is the most natural thing for landholders in South India to attack the whole system of land revenue and to ask for reform.

The view that what agriculture in South India requires is not a mere remission of the land revenue, but a revision of the whole system and a change in the very conception underlying it, was given powerful expression to at the Mirasdars' Conference at Ayyampet. Mr. C. R. Srinivasan, who presided over the Conference, observed that "the whole theory of re-settlement proceeds from the assumption that the Government is entitled to a share in the improvement whether of produce or of prices, quite irrespective of the fact whether the Government is in need of the additional revenue or not." Under the ryotwari system the land revenue is treated not as a tax but as rent to which the State acting as the landlord is fully entitled. It is a moot question of Indian land revenue whether the State is a landlord and the landholders are mere tenants obliged to let the State share in every increase in the yield, irrespective of whether it results from a rise in prices or an increase in the productivity of the soil. This question of whether the State is landlord or not has often been discussed amongst scholars only on a purely historical basis.

The rational viewpoint of whether it is necessary that the State should retain for itself the rights of the landlord and cut into the increased productivity of the soil, has been ignored. There is, indeed, no reason why the agriculturists should be asked to contribute more to the maintenance of the State than other sections of the population. If land

INSURANCE

NORTON BUILDINGS
OLD COURT HOUSE CORNER
CALCUTTA

revenue is only a form of contribution to the maintenance of government, then it should be governed by the same principles of equality of sacrifice as apply to the general system of taxation in the country. But at the present juncture, applications of these scientific criteria does not seem to be called for. For, even on the grounds of expediency, a remission of land revenue seems to be inevitable. But it is time that this source of constant friction between Government and the agriculturists should be eliminated. The leaders of the Mirasdras Conference, therefore, impressed upon the rank and file the necessity of abandoning the old demand for remission of land revenue and switching the movement on to a demand for the revision of the whole system. It is only then that the Government will see the necessity for bringing about a fair distribution of tax-burdens between agriculturists and other classes.

The annual report of the Registrar of Co-operative Societies is always a valuable index of the general economic conditions in the Province. Not only do the results of the year's working show the conditions prevalent at the time, but the viscissitudes of the co-operative movement are also an indication of the extent to which one might expect progress or otherwise in the near future. It is in this view, that the reports of the Co-operative Department are usually scanned by the press and the public. It is unfortunate that on this occasion the report is not a source of satisfaction for the present. The Registrar himself confesses that it is a somewhat gloomy report. The movement has had to contend with problems thrown up by the depression. There were endless difficulties to be faced by the co-operative societies; and they naturally suffered many disappointments. But such a position is a recent development. One has, therefore, to look for progress not of a positive kind, but rather of a negative character. It should suffice for the present if we are able to re-assure ourselves that the process of weeding out bad societies and bad practices and strengthening the sound ones has gone ahead during the period under review.

In this view there is indeed something to feel satisfied with. Past experience has taught the Registrar to be careful, and it would appear that as against 500 applications for registration of new societies, 140 new societies alone were registered. 492 societies have had their registration cancelled owing to their being either positively bad or at best dormant. The report shows the results of an attempt to classify the societies according to their standards of working. We learn that there were 306 thoroughly good societies in 1932-33 as against 348 in the previous year, 1,382 societies with some defaulters and some mistakes in accounts in 1932-33 as against 2,081 in 1931-32; and 8,507 societies which would have to be liquidated if they did not show improvement as against 8,951 such societies in 1931-32. Societies which have got to be liquidated numbered 1,982 in 1932-33 as against 1,718 in 1931-32.

All this is, doubtless, an index of the really difficult situation. But, there is still hope for the future for already reforms are being set afoot. The societies have been encouraged to take action under their own bye-laws to improve the management. Above all, there is the reduction in the rate of interest of certain banks; and the banks have been passing on to the borrowers the benefits of such reduction. It is to be hoped that when such benefits are reaped in large measure by the general co-operative public, the position will show a definite improvement.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, January 8.

I feel like expressing the keen disappointment of the Press at its exclusion from the proceedings of the Transport Advisory Council. The problems it has to tackle may have been of an administrative and "domestic" character, but so were also the problems faced by the successive Rail-Road Conferences and the Road Congress. Why was the public kept out of the Advisory Council meeting?

* * *

The chief reason for our grouse is that, for the first time in the history of these conferences, we have heard a realistic utterance from a Government Member and we should, therefore, have loved to watch its reaction at the council. Sir Frank Noyce did not mince words in describing the danger which the competition is causing to the future stability of our railway organization. His words should have been uttered long ago and his caution given earlier publicity.

* * *

In fact, hitherto the Central Government's participation in the various conferences had given the impression that it was out to develop the road system of India in a manner that did not take sufficient account of the dangers involved to the railway system, in which two-thirds of India's public debt is invested. Sir Guthrie Russell did proclaim the danger, long time ago, at one of these Conferences ; but his voice seemed, then, have been drowned by the road enthusiasts.

* * *

The point to remember is, that business interests, wishing to increase their sales, have been egging Government on to follow a policy of road improvement and road development. They have never had the ideal, now preached by Sir Frank Noyce, of confining their attention to opening up the country side. True, this ideal was paid lip service; but it was not the motive force. The Government of India now realize that they must take a bold stand and warn provincial governments and private agencies against the risk of developing existing road services which are increasing railway losses.

* * *

The speech made by the Member for roads might have been made by any Railway Member. Indeed, the attitude which Sir Frank Noyce has now brought to bear on the question, suggests that, if the portfolio of transport, including railways, is combined in his charge, there should be no fear of the general interests of the community suffering at the hands of the Government of India.

* * *

In this connection, I was talking to a railway official and asked him why the railways did not use the powers conferred by an Act of the Legislature to start their own motor services. The fact of the matter seems to be that, although the railways concerned have been circularised a number of times on the subject, none of them is anxious to organize such a service. They point out innumerable difficulties in the way of running such services and draw the conclusion that they would mean dead loss.

* * *

Apparently this point of view has now dawned on the Railway authorities, as a whole, and that is why they have begun to look to the Government of India to give them the necessary protection, instead of their exploiting an Act of the Legislature which must, for the time being, at any rate, remain a dead letter. Railways are certainly earning better than last year or the year before. So far, they are about 2¾ crores better than the previous year; but even that would leave a gap, and it would be surprising if Sir Joseph Bhore achieves his ambition of closing his career with a balanced Railway Budget.

* * *

The question of salary cut will have a very definite relevance to this matter. At least one crore of rupees will be needed to restore the cut on the railways. Can the authorities afford it? Certainly not. And yet, if the Government of India's General Budget restores the cut, the Railways will have to follow suit and draw on their milch cow "the Depreciation Fund."

* * *

Talking of the salary cut, I must say that the Olympians have a very different notion of the subject from that of ordinary people. To the taxpayer, Sir George Schuster's announcement meant, that, both the public servant and the general public, had been asked to share the sacrifice involved in balancing the budget. Sir George made a song of it, by describing at length, how the public servant was willing to bear his part of the burden. The natural conclusion from this song was that the two sacrifies were co-related and that they would be solved together.

* * *

But No! The Civil Service declares that there was no such undertaking given by Sir George Schuster and that in another part of his speech the ex-Finance Member declared that the salary cut was the first charge and would be restored before any other measure of relief is sanctioned. I shall not debate this point and will leave it to be fought out between Clive Street and Delhi. All I know is, that, if Sir James Grigg takes this lesson from the Civil Service, he will face an indignant Assembly—an Assembly in which Hudsons and James will out-Desai, Bulabhai in their condemnation of the Government proposals.

* * *

That Sir James Grigg will balance his budget, seems clear from the customs and other revenue so far declared. He may have a little surplus, too. But I doubt very much if he will have a surplus large enough for abolishing surcharges and restore salary cuts. He may have a crore of surplus which will meet the deficit which may be caused by restoration of salary cuts. I am told a compromise is being suggested in that the cut may be further halved. I doubt however if the Finance Member will listen to this advice.

* * *

The question of a Trade Agreement between India and the Irish Free State has been under discussion for a long time. Some conclusions have possibly been arrived at, but not a word escapes from the Government of India to point either way. Perhaps, one fine morning, Members of the Assembly will find a small tariff Bill on their tables giving effect to the Agreement.

* * *

I hope there is nothing more than meets the eye in the semi-official statement published of a prospective agreement between the Government of India and the Kashmir Darbar regarding transfer of authority in Gilgit from the State to the Paramount Power. The agreement is stated to be financially helpful to both the contracting parties ; and Kashmir sovereignty is stated to be intact. But considering that the Nizam would pay anything to get back Berar, over which the Nizam has technical sovereignty still, it seems that the Maharaja of Kashmere will have to satisfy his brother Princes as to what exactly is meant by this concession. Any way the Political Department has its Curzons.

(From Our Correspondent).

Bombay.
Thursday, Jany. 10.

The great topic in Bombay industrial circles is still the dispute over the reduction in mill wages at Ahmedabad. The Ahmedabad Labour Union has again written to the Millowners' Association repudiating their alleged right to effect a protectionate cut in the wages of time workers, in view of the reduction in working hours. Their plea is that the Millowners have attempted to put an unjustifiable interpretation on the award of the Arbitration Board dated May 18, 1920. There is neither a precedent nor a logical reason for such reduction. They have cited a few cogent facts in support of their contention. The letter explains:—

(1) The award in 1920 reduced the hours of work from 12 to 10 per day with effect from June 1, 1920, while the law still permitted a longer working day up to December 31, 1921.

(2) Simultaneously with the reduction in working hours, the wages of the workers were increased and no question arose of any cut on account of the shorter hours.

(3) In the case of piece-workers, it was specifically stated that since their earnings would diminish owing to the shorter hours, the loss should be made up by an increase in the scale of piece-work rates.

(4) The wage scale was then laid down for the shorter working day (10 hours) but it was provided that, if a mill desired to work 12 hours, as legally permitted, it could do so only with the consent of the workers and on payment of overtime.

It will thus be seen that while there is a precedent for compensation to piece-workers, in view of a reduction in hours, there is no such precedent in the case of time-workers. Besides, the Union rightly points out that the Millowners have taken an illogical view of the case. They argue that with an arrangement of a 54-hour week, a mill which has worked 10 hours each day, for 5 consecutive days in the week, has only, four hours to work on the last day, and that day is a legal day of 4 hours only. It cannot be said that a workman who has attended all the hours which a mill can legally work on a certain day, has put in half a day's work. They even go further and cite the Factories Act to prove that the Millowner's view is absolutely fallacious.

The law lays down 60 hours' work, but permits a 11 hours' day. Under this law, a mill may keep working an eleven hours' day for 5 days of the week and make, the last day one of 5 hours only.

"The question is, can the mill cut down half a day's wages while other mills which are working 6 days for 10 hours each may not. The answer is self-evident and is also a conclusive refutation of the theory that has been propunded by the association."

In view of such radical differences of opinion between employers and employees, the only plausible solution is obviously to refer the matter to an Arbitration Board. The Union rightly argues that the change in hours or in any other factor cannot by itself entail changes in wages, without reference to its effect on the basis of the wage arrangement. Any such change, unless brought about by arrangement, murt be settled through arbitration. It is a peculiarly suggestive fact that whenever the question of arbitration is mooted in Bombay, or, for the matter of that, in any part of India, all eyes are at once cast towards the Sage of Sabarmati. It is understood that as a result of correspondence between representatives of either side in the dispute and Mr. Gandhi, a deputation composed of spokesmen of both sides is going to meet Mr. Gandhi at Delhi about January 10. And the Millowners have decided to abide by the interpretation of the award given by Mr. Gandhi.

The grievances of the Ahmedabad labourers are, perhaps, understandable when we compare their lot with tht labourers in Bombay and Jalgaon. There the 54-hour week is already in operation, but the smooth working of the Mills is not affected by a senseless wrangling over a reduction in wages. At Jalgaon, the wages are to continue as they were before, but there will be a strict control over the labourers unnecessarily wasting their time during working hours as they have done before over breakfast and tea. In Bombay, the question of wages to suit the change in hours was settled about six months ago. And while the time-workers are getting the same wages as before, the piece-workers will get a compensated increase of 5 per cent. in the dear food allowance. Let us hope that Mr. Gandhi will be able to settle the dispute at Ahmedabad before any untoward developments take place.

In the meantime important developments are in the offing in connection with the Indo-Burma Trade Convention called by the Commerce Member of the Government of India at Delhi on January 9 and 10 been elected representatives of the Federation of Mr. Walchand Hirachand and Mr. G. D. Birla have Indian Chambers of Commerce and Industry. Mr. Kasturbhai Lalbhai has been elected by the Ahmedabad Millowners Association as its representative. It is imperative that the whole Bombay Presidency should put its house in order before it can effectively negotiate for trade agreements.

Despite the endless trouble within the cotton industry, trade in cotton piece-goods continues fairly satisfactory in Bombay. Trade just before the Divali and after has not been discouraging, but while the imports and local production has been on the increase, the level of rates is on the decline, in spite of firmer cotton markets. There has been an increase in the imports of British goods during the period September to November, the total quantities received for the three months being 8,790,000, 13,400,000 and 10,555,000 yards, respectively. Thus the total of 32,745,000 yards compares favourably with the 23,511,000 yards shipped by Great Britain during June to August. The improvements are most noticeable in the case of prints, bleached goods and dyed goods and Manchester has been steadily gaining ground. Japanese exports, on the other hand, have been decreasing. While Japanese exports in prints exceeded those of Great Britain, in bleached and dyed goods shipments, Great Britain has already passed Japanese totals. If about 17,236,000 and 15,562,000 yards of cotton and artificial silk exports from Japan are deducted, (the figures of British exports being negligible)—the advance of Manchester exports in textiles should prove encouraging. Although from the above, it may appear that the quota has realised expectation, the main object of the quota, namely, to secure a higher level of ruling rates, and thereby to permit local and other goods to work on reasonable margins has not been realised. In fact, standard cloths have been on a lower basis than the selling price of a few months ago.

There is general jubilation in Bombay over the recent proposal of Government to level a compound tax on motor vehicles in the Bombay Presidency. Mr. Nurmahomed Chinoy, Chairman of the Motor Manufacturers and Importers' Association and Chairman of the Bombay Branch of the Indian Roads and Transport Development Association, considers the proposal to level a compound tax of Rs. 100 per annum on private motor cars as a great relief to the already over-taxed private motor car owners. The tax would appear to be reasonable when it is considered that this amount includes all municipal taxes registration fees, and, last, but not the least, the existing iniquitous tolls.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT ; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

BRITAIN'S MONETARY POLICY

The Commons Debate on Britain's monetary policy did not attain to the standard one expects when Mr. Lloyd George leads the attack. In fact, Mr. Chamberlain, the Chancellor of the Exchequer, had, if anything, the better of the exchanges and for once the great Welsh Wizard was discomfited. Indeed, Mr. Lloyd George's speech was usually void of constructive proposals. And one wonders if age hath withered his one time rare gift of crystalising the cardinal points of his attack into one vitriolic phrase. His speech took the form of a continually repeated question as to what the Government were doing about unemployment. He was prepared to grant that the Government had restored the state of England's national credit, had provided cheap money and had generally revived trade, but it had failed signally to bring unemployment below the two million mark. The Chancellor of the Exchequer treated L. G. with cold contempt; and apart from the laconic statement that the Government's unemployment policy was to continue as it had been, he did not vouchsafe any comments on Mr. Lloyd George's interpellations. He put in a caustic reminder in support of his own optimism that there never had been a greater optimist than L. G. himself when he was Prime Minister. He devoted more time to Mr. Boothby's suggestion about the stabilisation of the pound and the dollar. And while acknowledging that it should be very helpful, if attainable, referred to the obstacles caused by the reason of the lack of harmony in the relations between the franc and the dollar. In reply to a pointed question whether the Government was prepared still further to cheapen money the Chancellor pointed out that present recovery was the result of sound finance and the restoration of confidence and the Government would not hastily embark upon any policy that might shake the confidence already created. While virtually conceding the point that exchange stabilisation was a *sine qua non* of a reduction, if not the removal, of trade barriers, he also pointed out that sterling was at present beween two fires, being undervalued in relation to the gold bloc and overvalued in relation to the dollar.

Although the Chancellor may be said to have met the opposition successfully, one must admit that there is a certain amount of truth in the line of criticism followed. The Government have so far conceded only palliative subsidies as industrial assistance. Such palliative measures do not go to the root of the problem. And it is desirable that such isolated actions should be co-ordinated on a bread policy of general economic recovery; and cheap money may be said to be the first requisite of such a policy. The stupendous experiment which is being carried on in America should put more heart into a Conservative Chancellor; and he may be sure that a more generous scheme of public spending will be hailed with satisfaction in Great Britain.

The Report of the F. B. I. Mission

The Federation of British Industries Mission in Japan and Manchukuo have issued their report. The sum total of their findings is that, while Japan is now in a very favourable industrial position, it is doubtful whether the comparative advantages of Japanese industry will continue in the same degree in the future. "We do not believe for a moment," says the Report, "that Japan is in a position to capture world trade, either in all markets or in all products or to destroy the highly developed industries of the West". It is admitted on all hands that a trade war between the two countries will be extremely undesirable and better readjustment between the industries of the two countries would contribute largly to a restoration of world trade.

The most notable achievement of the Mission was an agreement with Japanese commercial representatives to set up Committees between Japan's Economic Federation and the Federation of British Industries, in London and Tokyo, and discuss mutual interests. It was further agreed that the Japan Economic Federation and the F. B. I. Mission wanted to put into practice a scheme of this nature without delay. The proposal met with the approval of the J. E. F. and a powerful Committee has already been formed. The Report suggests that an equally representative Committee of the F. B. I. should be formed at once and should be empowered to enter into contract with the Japanese Committee.

With regard to the questions of openings for British industry in the new state of Manchukuo the Mission have come to the conclusion that there were such openings, chiefly in the provision of capital goods. A written assurance was received to the effect that a substantial participation by British Industry in various development works would be considered subject to mutual agreement as to prices and terms of payment. In the meantime, a tentative agreement has been reached with regard to the supply of steel products for delivery to Japan and Manchukuo during 1935. Goods such as diesel and gasoline road rollers, building machinery, diesel and gasoline engines, machine tools, agricultural and textile machinery, motor vehicles and other types of machinery are included in the list. The details of the scheme have been communicated to the British Iron and Steel Federation. In view of the exclusive and nervous state of international trade the achievement of the Mission may be said to have been considerable.

Redundancy Scheme in Cotton

There has been a further advance in the scheme for reducing redundant spindles as a measure of relief to the Cotton Industry. The Master Cotton Spinners' Federation have announced that sufficient support has been received from spinners to justify the Drafting Committee in appointing an independant Accountant to receive offers of spindles for sale or sealing. It may be recalled that the Government have held out hopes of relief to the industry provided a large majority of spinners approved of the scheme. In a circular letter to all spinners in Great Britain Mr. John Pogson, Secretary of the Federation, states:—

> "This decision was arrived at not only in view of the highly satisfactory majority in favour of the redundancy proposals, but also as the result of an interview which a small deputation of the Drafting Committee had recently with the Pesident of the Board of Trade.
>
> "The Committee has therefore appointed as independent accountant, Mr. John Adamson, who acted as liaison officer in connection with the questionnaires relating to the proposed Cotton Spinners' Association and the scheme for dealing with redunlant spindles.
>
> "Mr. Adamson will send you an official communication with a view to ascertaining the total number of spindles which are likely to be offered for sale or for sealing to the Surplus Spindleage Board which is to be set up in accordance with the proposals of the Committee."

The Drafting Committee are hopeful that sufficient support for the scheme will be forthcoming and they have hopes of scrapping ten million spindles leaving a productive capacity of 30 million spindles.

Air Mail Week.

But some wiseacres are sceptical as to whether such a huge number of spindles will be offered for scrapping. On the volume of the support that is extended to the scheme will depend whether the Government will assist in securing the necessary financial support for the spindles-scrapping scheme.

British Export Problem

The Current Issue of the *Westminister Bank Review* contains an interesting article on the difficulties in the path of progress for British Industries. The writer points out that after the Great War countries that were usually content with supplying raw materials to the manufacturing countries had stimulated the growth of their own manufacturing industries. They were not willing any longer to continue in the modest role of hewers of wood and drawers of water, but were fired with the ambition of becoming self-sufficient units. Such developments of secondary industries in the Far East, in South America, and in the Overseas Dominions of the British Empire greatly handicapped the expansion of British exports. Britain was perforce driven to look for alternative markets and she has partly succeeded by concentrating on the finer classes of products where long and inherited experience and traditional craftsmanship are a barrier to effective competition. She has also fallen back on producing those commodities for which she has special advantages, and has concentrated on exploiting new products and industries. The writer goes on to say that the more or less simple differentiation between the sellers of food and raw materials on the one hand and the manufacturing nations on the other such as obtained in the 19th century cannot be looked for in the future. And this makes the position of the United Kingdom which above all others is dependant for its very existence on selling its manufactures to buy food more precarious than ever before. This is the greatest argument for an increase of efforts to bring about an expansion of agricultural products in the British Isles.

U. S. A.

NEW LEGISLATION FOR NEW CONGRESS

With the approach of the New Congress all other questions or topics have lost their importance in the eyes of the American public. Speculation is very active as to what would be the nature of the new legislative activity which Congress would engage in the New Year. Such speculation has undergone various changes during the short period that has elapsed since the General Elections. When the results were first announced, it was thought that the American electorate had cast its verdict in favour of Mr. Roosevelt and his programme ; but later, it was believed that Mr. Roosevelt's success was so complete that he might well be embarassed by it. For there was the fear that certain elements in Congress might prove to be even more advanced than even Mr. Roosevelt himself. And the impatience which they might consequently feel at the pace of the recovery might impel them to ask for certain measures which Mr. Roosevelt is not prepared for. While the majority of public opinion seems to favour this view, it is also believed in certain quarters that the election was only a manifestation of Mr. Roosevelt's popularity and that, in the people's minds, Mr. Roosevelt's policies were less important than Mr. Roosevelt himself. The protagonists of this view seemed to suggest that the American public is in its heart of hearts dead set against the communism, to which in their view, Mr. Roosevelt has been pushing America forward. While it is yet too early to decide between these rival viewpoints, it is certain that the New Congress will have much to think over and to do and that the country's legislators will have a strenuous time of it. The Administration have, possibly, the fear that if the Congressmen's hands were left free at any time, there might be plenty of mischief for them to do and that the best way of avoiding it is to initiate new legislative activities themselves. If the measures are sufficiently exacting, Congress might find little time to devote to the fads of particular groups and the Administration might thus be enabled to lessen, if not escape altogether, the embarassments that one might fear from the leftist character of the New Congress. It is not suggested that the new measures are conceived solely as part of political tactics. But it is not improbable that the incidental tactical advantage of these measures is not lost upon the Administration.

One such measure seeks to reorganise the Federal Reserve System. It is well known that this is a somewhat ticklish question which the Government have fought shy of for sometime. The necessity for reorganisation was brought home to Mr. Roosevelt when at the inception of the recovery programme and the inflationary measures formed so large a part of it, he encountered the opposition of the Federal Reserve officials. Such changes as the Government have power to make in the personnel of the Federal Reserve Bank, Mr. Roosevelt readily effected ; and to that extent the path has been smooth and clear. But the conflict is there ; and if there is to be a complete co-ordination of banking with general economic policy, the Federal Reserve System will have to be reorganised in many respects. It will be remembered that a committee of eminent economic professors recommended sometime ago the supercession of the present Federal Reserve System by a new Central Bank. It was to be more amenable to the control of the Treasury. But immediately after the proposals became known to the public, they had to be definitely disowned by the Administration ; for they had then to consider the attitude of the investor to the measures of new financing which they had got ready for announcement.

But now by all tokens, the Government have drawn up a fresh bill which will seek to reform the Federal Reserve System. Experts appointed by the Administration have already drawn up a scheme to this end. Changes are proposed which will bring the Federal Reserve Banks more closely under the control of the Federal Reserve Board. It is still difficult to get a comprehensive idea of the reform. But, it might be mentioned, the Board will in future have power to direct open market operations and the Bank's rediscount facilities would be extended to cover long-term paper. It is believed that this programme comprises fourteen points, a rather ominous number, considering the fate of President Wilson's fourteen points at the time of the Armistice. Conservative opposition will, doubtless, be strong ; but it must be remembered at the same time that such opposition will have to reckon more with the extremist groups in Congress than with the President himself. It may not prove a bad bargain for the Conservatives to make up with the President in order to escape the worse fate that might befall them if the extremist wings in the Congress were to have their way.

The other questions that will figure in the discussions of Congress in the New Year are those relating to price fixing and a National Board in the coal industry to prevent price cutting as between the different producing districts. Of late, signs are visible that the Administration's faith in price fixing as a means of promoting recovery has been on the decline. As in so many other matters, the ideas of the N.R.A. in this regard are showing an increasing and almost incredible mobility. Time was when the Government thought that the only way of promoting recovery was to end cut-throat competition and to provide a large consuming

Air Mail Week

market by an increase of the general level of prices and by subsidies of various kinds in the farm districts. But now, the President himself confesses to the importance of low prices as a means of stimulating consumer's demands. Mr. Donald Richburg, the new head of the N.R.A., also confesses to a similar opinion. It is possible that the New Year will see a relaxation of the rigorous system of price fixing which was instituted in the early days of the N.R.A. Price-fixing laws have been definitely terminated in the number code, but they continue in the coal and copper industries ; and these are definitely alarmed at this position. It is possible that during the meeting of the next Congress attempts will be made to secure the desired changes.

The uncertainties of the present economic situation have not prevented forecasts of business trends in the New Year. Mr. Charles, G. Dawes, who is now the head of a Chicago trust company, has ventured to suggest that America will be in a definitely prosperous state by next June. In other words, he has given the depression a six months' notice to quit. Those who have been able to command faith in the recovery measures will, naturally, try to agree with Mr. Dawes in this encouraging prediction. After all, no one would be gloomy, who can help it. On the other hand, there are others who have never taken kindly to the recovery measures and who would like to feel that the recovery would precipitate a crisis of a different kind and that very soon the country will have to solve the problems, not only of the depression, but the amateurish attempts to cure it.

But Mr. Dawes' prediction is not based on an examination of the merits of the Recovery Programme and its actual results. Mr. Dawes has come to his conclusion on the basis of a study of the experience of previous depressions ; and according to him 5½ years is the time required for consumptive demand to reassert itself after the relapse of the depression period. It will now be obvious that, if this view is correct, the return of prosperity should not be much later than June 1935. Already there is a revival in consumptive demand which is shown by the increased sales of the retail selling organisations. If this trend continues, then it is possible that the improvement will spread to all branches of trade and industry in another half year. At first sight, the prediction of Mr. Dawes seems more than plausible.

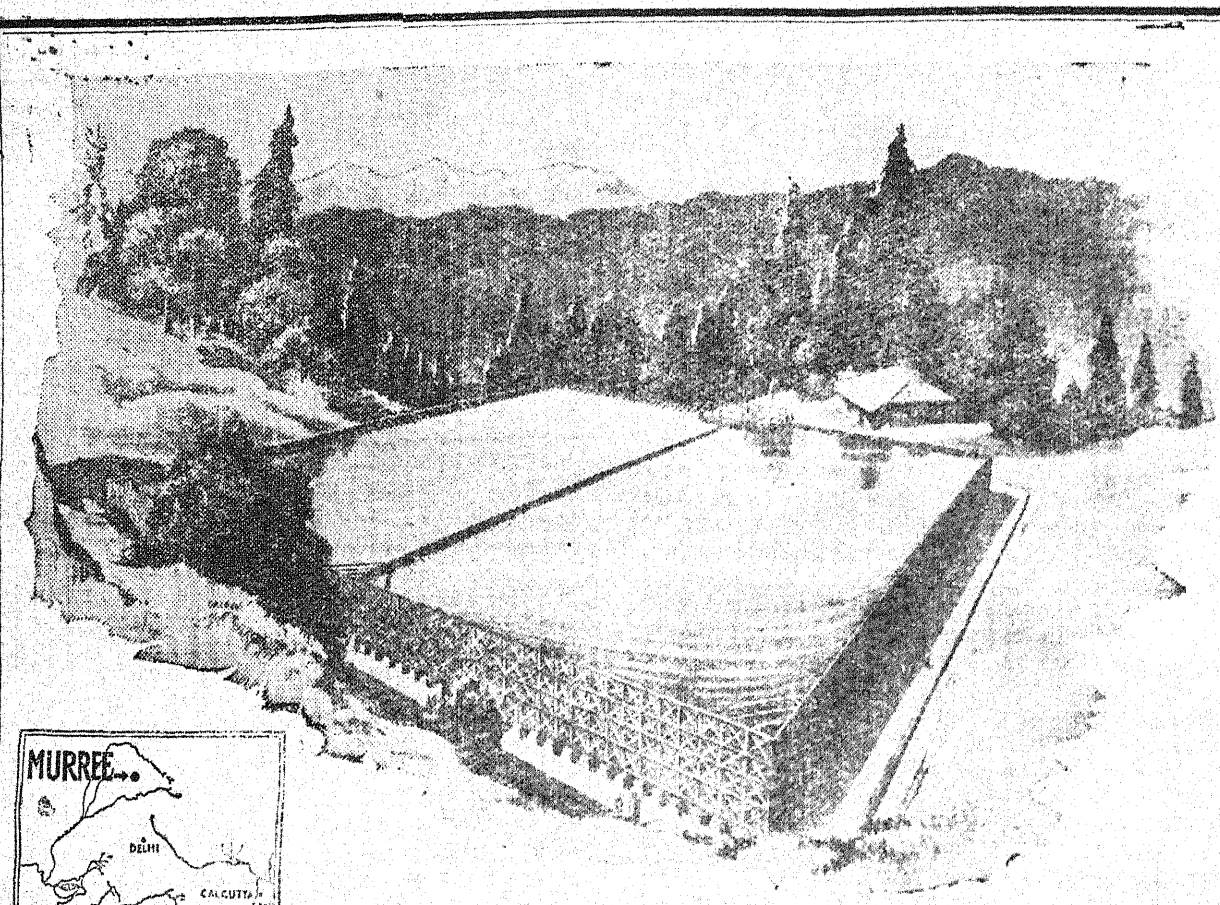
Akin to this, but different in origin, is the estimate that is now made by the Anglo-Oriental Mining Corporation of the prospects of the American automobile industry. In the monthly bulletin which it issues, the Corporation expresses the opinion that a revival in automobile production is already well under way and that sales which are still lagging behind, will soon grow up to the fullest extent of the production. The continuance of the present revival of production is confidently anticipated. The Corporation thinks that the main influence at work to increase automobile sales is the big potential demand for replacements. This is not very different from the general theory that purchases, which have been postponed during the period of the depression, will inevitably have to be made before long and that when such purchasing comes into play, the forces that were at work during the depression will have been offset. But in the case of the automobile industry such a view is supported by a wealth of statistical data which are not easily obtained in the case of other industries. The National Automobile Chambers of Commerce has calculated the average current life of a car to be about 7 2/3 years compared with 6¾ years in 1929. But, even if an extraordinary long term of 8 years is taken for the purposes of this calculation, it is estimated that the total replacements due under normal conditions in 1935 approximate 7 million units, which is nearly three times greater than the estimated production for the year. It is true there has been a decline of 2,700,000 in car registrations since 1930. It is also possible that many persons who had formerly possessed a car would find themselves unable to replace it. Even if reductions are made on these accounts, there will be a replacement demand which will be nearly double the amount of last year's total production. The figure of 7 million units is given, not as an accurate estimate of the total demand in 1935, but as a means of judging the extent of the demand that would arise. The improvement in the general level of business activity during the year and the flow of money into farm districts by way of compensation for crop restriction, suggest that the replacement demand will not be as low as one might otherwise apprehend. It is to be remembered that a revival of automobile production has already taken place. The production for the third quarter this year was 696,851 units, the largest third quarter production since 1930 and 3.6 per cent. up over a similar period of 1933. Output for the first nine months of 1934 totalled 2,493,260 units, which was within 18.2 per cent. of production for the same period in 1930. A seasonal decline is occurring in the fourth quarter of this year, but the year's production has been authoritatively estimated at approximately 2,778,000 units—which is 12.2 per cent. above 1933 and within 20.5 per cent. of the 1930 output of 3,510,178 units. In increasing production in this manner, the automobile producers have shown an instinct for understanding the most likely movements of the new year.

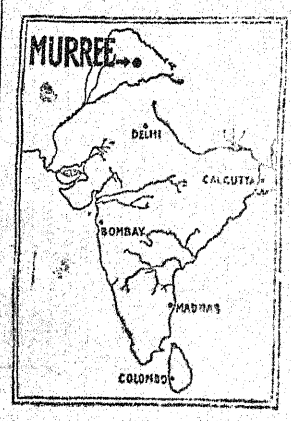
FRANCE

FRUITS OF DEFLATION

The week in France had a forceful reminder of the hardships which France has had to undergo as a result of the Government's monetary policy. The Citroen Company's troubles have now been brought to a head by the granting of an order for judicial liquidation. The troubles of this Company, which date from the latter part of 1933, were well-known. But it was believed that the Company would be able to tide over its difficulties or, at least, that it will be in a position to compose them by some measure of financial restriction. At any rate, no one thought of the likelihood of the Company having to close its works and throw its numerous workers out of employment. The fact that judicial liquidation has now been ordered comes as a rude surprise to many people. Sometime ago, it was known that Monsieur Michelin of the Michelin Tyre firm came to the rescue of the Company with several million francs. Later there were talks of reconstruction ; but the proposals in this regard were not acceptable to Monsieur Citroen. The inevitable result has, therefore, ensued. It is possible that the administration of the Company is responsible for errors of judgment. But there can be no doubt that the Company would have got over its troubles, if France were in a position to retain the exports for her automobile production. The policy, which the French Government have pursued, has involved unending handicaps for French industry, and the motor industry has been particularly hard hit by the devaluation of the American dollar. The Citroen Company has suffered a grievous decline in the exports of its products ; and with the fall in production, the costs have gone up and the affairs of the Company became more and more unmanageable.

Though others may have a share of the blame for its misfortunes, it is certain that the monetary policy of the Government has had a great deal to do with it. Though the Citroen Company is only one of the many victims of France's passionate adherence to the gold standard, there is one circumstance which will tend to invest the close of this Company with a peculiar significance. The Citroen works are situated not far from where the French Parliament is housed. If and when the 20,000 employees of the Citroen Company decide on a demonstration before the





LARGEST PRESSED STEEL TANK IN THE WORLD

3½ MILLION GALLON RESERVOIR IN THE HIMALAYAS FOR MURREE

On a site so inaccessible that aerial-ropeway and bullocks provided the only possible forms of transport —where snow for a quarter of the year prevented all possible progress : under such conditions this immense steel tank was completed in under six months, a fitting commentary on the efficiency and resources of the Braithwaite organisation.

Clive Works, Calcutta. **Mulund Works, Bombay.**

Air Mail Week

Chamber of Deputies, the situation might well prove to be as serious as that which brought Monsieur Doumergue into power. It is quite irrelevant that such a demonstration will be but a crude instance of political pressure. What is important is that such a demonstration on the part of the employees of Citroen will be an effective advertisement of the dangers contained in the present exchange policy of the Government. Hitherto, this country of small scale rentiers has regarded the monetary question from the sole standpoint of the value of its small savings. The differences of the export industries have not weighed much in their minds, but a demonstration like the one which the employees of Citroen can stage must help the popular mind to regain a sense of proportion. And for the first time the Government will have to consider seriously a problem that arises directly from the present policy.

It is useful to speculate on the possible results of such a demonstration. The workers will be concerned primarily with their employment. It cannot occur to them that their misfortunes could have been avoided by a timely change of monetary policy. Nor can they be expected at this juncture to push their own individual needs to the background and initiate a popular movement for devaluation. All that they might, conceivably, ask of Government is that they will take the measures necessary for the continued working of the factory ; and this means that the present liquidation proceedings should be stopped and that the Company should be enabled to continue its operations. It will thus be necessary to have some sort of financial settlement ; and as in the present position private interests are not at all likely to come forward to the rescue, this task will devolve upon the Government. It is known that already the Government have been approached in the matter, that is, to lend the Company the necessary funds and to keep it going.

It is reported that M. Flandin gave the fullest consideratio to the question and came to the conclusion that he will not be justified in diverting public money to this purpose. Possibly, it was the knowledge of such a decision that precipitated the crisis. But it will be a different situation when the demand is made by a body of 20,000 workers gathered together before the Chamber of Deputies in session. The political importance of this demonstration would be immeasurably heightened. It is also significant that Monsieur Flandin has to his credit measures exactly similar to those which he is now declining to undertake. When he was Secretary to the Treasury, Monsieur Flandin lent public funds liberally to banks which had mismanaged their affairs more than Monsieur Citroen may be alleged to have done in the case of his Company. All these arguments will tell in the tense situation which will prevail when the Citroen workers carry out their demonstration. So far as the public is concerned, it will be impressed with the sufferings which the maintenance of the franc wreaks on the people at large. Formerly, it was only a case of the French hotel keepers raising a hue and cry that the overvaluation of the franc was depriving France of her valuable tourist traffic and that as a result the French hotel keepers were experiencing a hard time. This was only one instance of hard-pressed French industries ; but the average Frenchman, with his eyes glued to the stocking on the mantlepiece, could not appraise the significance of these cries. But now that the unemployed will be calling a different tune before the Chamber of Deputies, the whole situation might alter. It is possible that the next move for devaluation of the franc will come in this strange and unexpected manner.

GERMANY

GERMAN-SOVIET TRADE PACT

The feeding of German industrialism is a problem which the State has strenuously sought in diverse ways, the latest being a reciprocal agreement with Soviet Russia. At one time, not long ago, the prospects of such an agreement were not re-assuring: but following the recent appointment of Mr. J. W. Kandelaki as leader of the Soviet Commercial Delegation in Germany, Berlin has gone optimistic in regard to the Soviet market for German goods. The negotiations, which were rather in the air before Mr. Kandelaki's arrival, have since moved forward swiftly to very near completion.

The projected agreement provides for the grant of Rm. 200,000,000 credit for five years at 2 per cent. per annum above the rediscount rate of the Reichsbank (at present 4 per cent.) and the settling of differences of opinion concerning the constitution of the Court of Arbitration for possible disputes arising from the delivery of German goods to Russia. No trade pact is free from political reactions. There is a school of German politicians who receive their opinions from the industrialists who are not enamoured of the pending negotiations, believing that the Soviet's objective in concluding a trade pact with Germany is to put pressure on the French industry which is only willing to grant credits for 22 months in addition to a 70 per cent. guarantee by the French Government. These critics consider that the prices offered by Soviet Russia are so unsatisfactory that no exports can actually materialise from the terms of the agreement. They ask for an extension of the export guarantee of Government to exports to Russia, despite the Government's assurance that it is not in a position to grant an export subsidy in addition to a 60 per cent. guarantee for Russian bills. The difference of opinion is really between the big and small German industrialists. The former, in view of the dwindling of the outstanding Russian debts to Germany to about Rm. 315,000,000, are prepared to forego the sum if they got in its place an export subsidy. Their poorer colleagues are not in a position to accept the proposition as they need the State guarantee in order to discount Soviet Bills.

The Saar.

All Germany, that is, Herr Hitler's Germany, is obsessed with the plebiscite on January 13, which will put an end to, or aggravate, the Saar problem. In a New Year Proclamation to the Nazi Party, Herr Hitler used the language of patriotic passion. "Our warmest wish for 1935 is" he said "the return of that German territory which through its voice of blood will, on January 13, proclaim to the whole world its indissoluble community with the German Reich"; adding that Germany is stronger now than a year ago and the Nazi Party more than ever the political will of the nation. The people, though keyed up to supreme tension, have comported themselves with commendable restraint, except in a few isolated instances. Political prophecy is a snare, and specially in regard to the verdict of the Plebiscite. There is no doubt that the re-union of the Saar with Nazi Germany is looked up to as the certain vindication of German self-respect. By all tokens, the hope of Nazi Germany will be realised and every diplomatic centre in Europe hopes that the incident will be closed.

A New Development.

If coming events in Germany cast their shadow before, there is a good deal of substance in the pushing aside of Herr Gothfield Fedar who drew up the National Societist party Programme and who, but a brief while ago, was considered the economic guide of

(Continued on page 112)

JUTE AND JUTE GOODS

JUTE

Calcutta, January 10.

The raw jute market has ruled very steady towards the close of the week; price for March futures have touched the new high watermark of the season quoting at Rs. 35-8 per bale.

There has been fairly good business done by Jute Mills, though shippers have for the most part remained out of the market. Business in ready Firsts marks was done at Rs. 32-8 with buyers over towards the close. Not much business is reported from London though the undertone was quite steady at £17-15-0 per ton.

The Government of Bengal have made an announcement that they propose to reduce the jute area for the next season by 5/16ths of the crop grown in 1934. This factor together with the fact that the Indian Jute Mills have decided to release another 2½ per cent. of hessian looms sealed in 1931, had a very healthy effect on the market and the prices are now ruling steady to firm. It is anticipated that a gradual further rise may take place partly in sympathy with outside markets and partly due to the improved demand of jute goods. A fully steady market is to be expected for at least another two months. The tendency thereafter will depend upon the actual sowings to be reported then.

JUTE MANUFACTURES

Calcutta, January 10.

Hessians market has been ruling steady throughout the week and Rs. 9 level is for the time being well consolidated. The firmness of the raw jute market has further hardened the prices of jute goods and the shortage of ready stocks has been a great strengthening factor. The news of the release of another 2½ per cent. hessian looms from May next has been taken very calmly and prices in spite of this news have gone up a little. Business from the Overseas market has not been very large but sellers too are not keen for sale, mills having already sold out their output for several months to come.

Heavy goods market is also steady in sympathy with hessians and a good business is passing at higher rates. B. Twills have been done at Rs. 25 and Liverpools at Rs. 28. Heavy Cees for the middle of the year were done at Rs. 25-4. Heavy goods market seem to be rising further during the months to come.

COTTON AND COTTON GOODS

COTTON

Calcutta, January 10.

The total Oomra crop, according to the All-India forecast for 1934-35, is estimated at 1,689,000 bales compared with 1,767,000 bales last year. The market considers the figures are over-estimated and contracts have not been as numerous as the figures would warrant. Actual arrivals of Oomra cotton at upcountry centres bear out the market view.

With a lack of tenders against the Oomra December-January, 1935 contracts, Indian cotton virtually reached normal parity with American. Tenders since December, 1934 to the last week-end against the Oomra December-January, 1935 contracts were nil, while those against the Bengal December-January, 1935 contracts have been 27,100 bales.

The world stock of American cotton on October 1, 1934, stood at 17,206,000 compared with 20,65,000 bales and 22,462,000 bales respectively on the same date in 1933 and 1932.The world's mills used, according to the New York Cotton Exchange Service, 1,099,000 bales of American cotton during October, 1934, compared with 846,000 bales in September, 1934 and 1,263,000 bales in October, 1933.

American and Egyptian cotton prices have continued fairly steady with small fluctuations. Middling American spot at Liverpool closed at 7.23d. having gained 3 points on last week's closing price. Egyptian cotton also records a slight advance on balance, and Sakel middling is quoted at 8.98d. as compared with 8.94d. a week ago.

Greater fluctuations have been recorded in the Bombay cotton market. From Rs. 241, Broach for April-May advanced to Rs. 248 on speculative buying but this was not long maintained, and during the last day or two prices have declined smartly to close at Rs. 237-8 with sellers preponderating.

COTTON PIECEGOODS

January 10

A feature of the local market has been the absence of anticipated offtake in heavy winter styles which the recent wave of cold weather indicated. Indian mills goods in demand more than Lancashire or Japanese, though the latter did better than Lancashire. The Id festival brought no big business.

The economic pressure on Bengal is responsible for the decided falling off in purchasing power at a season when the market is busy in other years.

Standard qualities of whites, dhooties and printed goods are prominent in the forward positions at advanced suppliers' prices in conformity with the rise in value of the raw material.

The yarn section suffered from a decline in prices, owing to the reaction in the price of raw cotton in Bombay, there being very little demand from up-country markets. The Japanese Cotton Spinners' Association report that cotton yarn production in Japan during November, 1934 amounted to 322,405 bales compared with 301,171 bales during October 1934.

Reports from Japan state that Shanghai Mills will be obliged to dispose of their output owing to tightness of the money market which has followed the recent active outflow of silver from China. These mills are selling Sheebing in large volume at very low prices to India.

BULLION

GOLD

Calcutta, January 10.

With little business, the undertone remained firm owing to absence of sellers. The easier tendency in sterling in terms of gold currencies has had no appreciable effect on the local market.

According to the American Bureau of Metal statistics, the gold production of the world was 22,370,718 fine ounces in 1931; 24,227,415 ounces in 1932 and 25,371,570 ounces in 1933.

Total exports of gold from the United Kingdom during the week ended December 28, 1934, amounted to £371,000 of which Chile alone took £354,000. Total imports into the United Kingdom in the same week amounted to £1,195,000 of which India shipped £1,039,000.

SILVER.

Calcutta, January 10.

Prices continue at a steady level, with the market awaiting a turn of policy in the United States, foreshadowed in President Roosevelt's address to Congress. There has been some speculative operations; but on the whole the market ruled quiet.

In 1931, 1932 and 1933 the world's output of silver was respectively 198,645,309; 169,282,095 and 164,699,846 fine ounces. In the first seven months of 1934 Canada's output was 8,949,000 ounces, which is slightly larger than the 3,700,285 ounces produced in the same period 1933.

Total exports from the United Kingdom during the week ended December 28, 1934, amounted to £202,000, of which £129,000 worth was exported to France. Total imports into the United Kingdom during the same week amounted to £230,000 of which £208,000 worth came from Hongkong.

SUGAR

Calcutta, January 10.

The local market registered an advance of 2 annas per maund in Java white owing to good spot demand and general improvement in prices of Indian sugars. The tone was steady at the week-end.

Cawnpore market stiffened owing to rumours of reduction in railway freights from factories to Bombay and Karachi. Arrivals at the beginning of this month were estimated at 700 tons and stock at about 800 tons.

Stocks in M.B. Indian ports on December 20, 1934, were estimated at 12,193 tons against 10,974 tons same time last year.

Shipments from Java during November 1934 were estimated at 111,275 tons against 97,301 tons during November, 1933.

On the New York terminal market there was a sharp advance of 6 points in ready and 11, 11 and 9 points in March, May and July position respectively; London terminal market was higher by 3¾d. in December and ¾d. and ½d. per cwt. in May and August positions. Java London was reported unchanged. A fortnight ago "Nivas" had sold about 10,000 tons superior, partly for India and partly for China on the basis of 3.05 for W. Coast and 3.10 for East Coast India Ports and 3.30 glds. per 100 kilos for China.

Total Eastern ...		108,759 ,,	80,819 ,,
Grand Total ...		111,275 ,,	97,361 ,,

The estimate of the statistical position of Java as at 1st December, 1934:—

Carry over at 1st April, 1934 ...	...	2,519,619 tons
Crop 1934 (estimated on 1 November, 1934)		644,164 ,,
Total Available Supply ...	...	3,163,783 ,,

EXPORTS:—

April 1934 ...	68,561 tons		
May ,, ...	66,863 ,,		
July ,, ...	91,102 ,,		
July ,, ...	95,571 ,,		
August ,, ...	107,306 ,,		
Sept. ,, ...	126,562 ,,		
Oct. ,, ...	103,799 ,,		
Nov. ,, ...	111,275 ,,	771,039 tons	
Home Consumption 8 months		200,000 ,,	971,039 ,,
Balance of Supply at 1st December, 1934			2,192,744 ,,
Compared with same period 1933		...	2,898,450 ,,
,, ,, ,, ,, 1932		...	3,000,606 ,,

The exports during November comprised sugars of crop 1932 52,282 tons, crop 1933 47,767 tons and from crop 1934 11,226 tons. In view of the reports of opposition to imports of Java sugars in British India the total for the month must be considered highly satisfactory. Although the quantity for December will be less, the steamers berthed for India are well booked. In the interval we have had no encouraging news on sugar from markets abroad, the London and New York futures markets shewing no important fluctuations. The situation in America appears still to be very uncertain in respect to the turn of the year. Sales of Cubans were reported for January arrival at a price of 1.73 cents. C & F New York. No further news is to hand anent the proposed shipment of the balance of the Cuban quota for 1934 to New York—our latest advices were that freight for a quantity of 200,000 tons had already been chartered.

From London we had advice that Licht had increased his estimate for European beet production by 107,000 tons, which, however, has not affected the market. Buyers ideas in the Indian and China markets have been far out of line with Java requirements, and the only business which has been done with the NIVAS for these markets in the interim has been for filling earlier engagements. Steady business has been maintained for local and nearby island trading.

The total sales by the NIVAS in the meantime were 13,006 tons Whites and 18,184 tons Browns, of which the more important sales were:—

Dec. 4th about	2,300	tons	WHITES
telquel quality, for local cons.			
Dec. 5th about	1,000	,,	BROWNS
from Tjilatjap for China Refiners.			
to Japanese buyers	3,000	,,	BROWNS
telquel, for Bangkok	1,400	,,	WHITES
Dec. 6th about	3,000	,,	BROWNS
for China Refiners.			
to Japanese buyers	1,000	,,	BROWNS
Dec. 7th about	1,000	,,	WHITES
for India	1,000	,,	WHITES
Dec. 10th about	3,000	,,	BROWNS
to Japanese buyers	3,000	,,	BROWNS
Dec. 14th about	1,250	,,	WHITES
telquel for local cons.			

The total sales of the NIVAS to the 15th instant were:—

WHITES	1,917,854	tons
BROWNS	824,243	,,
SOFTS	9,570	,,
MOLASSES	77,587	,,
	2,829,254	tons

China Markets.—Shanghai reports that sellers have been continually offering Whites at F. 4.—per 100 kilos CIF terms, without interesting any business. The market is disturbed by the pending arrivals of other sugars such as European Crystals and American Granulated. A parcel of 2500 tons of the latter is reported to be due before the end of the month in Shanghai. The Hongkong market continues stagnant. A parcel of 1000 tons American Granulated is reported to be destined for that port due to arrive about the 26th instant.

Indian.—Fair enquiries have been in the market from Bombay for December and January to March shipments, but we have heard of no direct business with that market. Latest reports were that buyers were interested in Whites at around 5/- per cwt. CIF, also that fair business was being done in local sugars. A report of the 8th instant states that a turnover of about 10,000 tons took place at prices ranging from 3-6 to 3-9 on the basis of CIF java parity to Bombay. The agitation for an increase in the import duty continues and it is almost certain that a reduction in railway freights from refineries to ports such as Bombay, Madras, Karachi, will be granted. This would put Java Sugars out of parity altogether, until the greater portion of the Indian production has moved into consumption.

From the Eastern ports we find no buying interest at all.

Stocks on the 15th instant were:—

CALCUTTA	2,100	tons
MADRAS	400	,,
RANGOON	300	,,
KARACHI	3,800	,,

(Other ports not advised).

On present Nivas indications and exchange we quote JAVA WHITES CIF:—

Per cwt. shipment December to May inclusive.

To COLOMBO, BOMBAY, KARACHI ...	5/4½
To CALCUTTA, RANGOON, MADRAS ...	5/5½

London.—The only news of interest reported was the increase in LIGHTS estimate of the end of November for Europe of 107,000 tons. Raws were evidently not pressed for sale, and our reports are that Refiners stocks were rather on the low side. Terminals were steady without any important fluctuations, indicating that the December liquidation was well absorbed.

Closing buyers prices on London Terminal market were:—

	March	May	August	December
December 5th ...	4/4½	4/6½	4/9½	4/10½
,, 8th ...	4/4½	4/6½	4/8½	4/10½
,, 15th ...	4/4	4/6	4/8	4/10

New York.—The only sale of Raws reported was on the 14th instant when 5,000 tons Cubans were sold at 1.73 cents C. and F. New York for January arrival. Raw Futures indicate a very steady market. The December position appears to be maintained, although this was expected to give way. Closing prices quoted were:—

	December	March	May	July	September
December 3rd ...	1.79	1.77	1.81	1.86	1.91
,, 10th ...	1.91	1.80	1.85	1.89	1.93
,, 15th ...	1.87	1.87	1.83	1.88	1.93

Exchange.—Stering continued fairly steady with no important changes. To-day's Banks buying 3 days sight on London quoted at F. 7. 27½ per £ delivery December to March.

TEA

Calcutta, January 10.

After the holidays, the selection on offer for import was less attractive and whilst a fair number of good liquoring teas were available, many were of rains manufacture and showed signs of detention.

For internal consumption, a strong market was experienced and prices advanced an irregular 3 pies per lb. for plain broken grades, with any half grades and B.O.P. types with tip meeting a particularly strong demand at an advance of about ½ anna per lb. Dusts were in good demand.

The following are the full particulars of Sale No. 28.

Tea with Export Rights.	1935	1934
Offered	33,009	22,432
Sold	23,790	21,806
Average	0-8-0	0-11-0

Tea for Internal Consumption.

	Leaf		Dust	
	1935	1934	1935	1934
Offered	6,031	9,212	9,739	10,110
Sold	5,912	8,756	9,431	10,093
Average	0-5-7	0-5-2	0-5-0	0-5-10

The following are the quotations:—

Tea with Export Rights.

Common Broken Pekoe Souchong ...	5 0 to 5 3	4 3
Common Broken Pekoe ...	5 3 to 5 6	4 6
Common Pekoe ...	5 9 to 6 0	4 6

Ceylon

At the London auctions on January 9, 20,200 packages of Ceylon tea were submitted for sale. There was a keen competition. Common sorts were firm, better kinds also were distinctly higher.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 11d., to-day's auction 11d. lb.; Common Orange Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11½d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10⅞d., to-day's auction 11d. lb.; Clean Common Broken Pekoe last auction 11½d., to-day's auction 11½d. lb.; Clean Common Orange Pekoe last auction 10⅞d., to-day's auction 11d. lb.; Clean Common Broken Orange Pekoe last auction 11⅜d., to-day's auction 11½d. lb.

Tea Statistics

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quantity of tea entered for export to United Kingdom for the second half of December, 1934.

Calcutta—Black 55,044,918 lbs.; Green nil.

Chittagong—Black 4,348,668 lbs.; Green nil.

Quantity entered during the corresponding period last year.

Calcutta—Black 8,790,995 lbs.; Green nil.

Chittagong—Black 1,350,686 lbs.; Green nil.

Total from April 1, 1934 to December 29, 1934.

Calcutta—Black 143,293,084 lbs.; Green nil.

Chittagong—Black 70,904,757 lbs.; Green nil. Total 214,197,841 lbs.

Total from April 1, 1933 to December 30, 1933, 207,989,300 lbs.

Exports

Exports from Northern India from 1st April to 5th January, 1935.

MISCELLANEOUS

WHEAT

Calcutta, January 10.

Buying continues on a brisk basis, resulting in an advance in prices at the week-end. Both local and up-country buyers are in evidence.

Punjab sowing have, it is reported, been definitely affected by the lack of moisture and any rainfall in the near future will be too late to improve the crop materially.

In the "futures" section, the market has reacted to operations of Bombay speculators, who are said to cover-in extensively and a quick advance of 2 annas per maund synchronised with a general nervous feeling.

Overseas the reduced prices quoted for Australian and Argentine descriptions led to a business in near and spot lots; but millers, carrying a more than adequate stock position, are operating cautiously.

Continental wheats are circulating freely—a factor which has had a steadying influence. More buying interest was on evidence on the Liverpool Terminal last week, though large transactions did not materialise.

Quotations:—

Chicago (per bushel)	
May	$1.01⅝
July	$0.93⅞
	$0.92⅜

LINSEED

Calcutta, January 10.

During the period under review the Linseed market has ruled very steady and May Beta is now quoting Rs. 4/14/6 as against Rs. 4/10 a fortnight ago. The rise in the Plate seed is not corresponding with the local rise; but the prices are, however, firmly maintained due to heavy bear position and reported damage to the standing crop on account of the severeness of winter and recent rainfall in the linseed growing area. The tone of the market is healthy and purchases at dips appear quite justifiable.

GROUNDNUTS

Calcutta, January 10.

The Madras market is very firm with a strong upward tendency. Dry weather continues throughout the Presidency and arrivals of the main winter crop are coming in freely; receipts at Pondicherry, Tindivanum and Vellore averaging 1,000 tons of kernels daily.

Over the week-end, business was put through at £12 January sellers for Coromandel machined c.i.f. north Continental ports. Shippers' buying limits stood at Rs. 30 for machined and Rs. 27 for ordinary, per French candy of 531 lbs. ex-coast godowns.

Exports of groundnut kernels from the Madras Presidency during November 1934 amounted to 24,467 tons compared with 36,227 tons shipped in November 1933, the decline being due to smaller shipments to France, Italy, and Germany. Exports of groundnut oilcake in November, 1934 totalled 4,373 tons against 1,162 tons same month last year. The All-India shipments of groundnut kernels for November 1934 amounted to 31,000 tons valued at Rs. 3,800,000 against 56,000 tons, value Rs. 6,700,000, same month last year.

The market for groundnut oil has advanced further and values are now quoted at Rs. 68 for "Raichur" quality, Rs. 66 for "Chekku" quality and Rs. 70 for "Virudhunagar" quality, per Candy of 500 lb., loose ex-sellers' godowns. Groundnut oilcake continues strong owing to the buying support of exporters and "Expeller" cake is quoted at Rs. 60 and "Rotary" cake at Rs. 55 per ton of 20 cwts., packed in gunnies, free on rails Madras or other downcoast ports.

Arrivals of groundnut kernels into Madras during the week ended December 29, 1934, amounted to 25,953 bags or 2,044 tons against 31,055 bags or 2,445 tons in the preceding week and 22,734 bags or 1,790 tons at the corresponding week of last year.

HIDES AND SKINS

Calcutta, January 10.

The local raw hide market kept up a strong tone, values advancing appreciably. Exporters to Europe and chrome tanners in Northern India continue to support the market.

Dacca drysalted hides are quoted at Rs. 4 to Rs. 4-8, Dharbhangas and Purneas at Rs. 4-4 to Rs. 4-8 and Kishenganj at Rs. 5-8 to Rs. 6 per 20 lb. At Cawnpore, Halali Firma cow hides are strong and values are quoted at Rs. 6 to Rs. 10 per 20 lb. according to quality.

London advices report that the market for East India tanned Kips was moderately active at about ¼d. per lb. above the minimum selling prices. Spot supplies were ample for British buyers' requirements.

Madras reports nothing doing in the tanned cow hide market, values remaining unchanged.

Owing to the double disadvantage of low prices in the foreign markets for the finished article and the high rates ruling in India for raw hides, it is likely that most tanneries will automatically stop soaking in the near future. Unless London buyers come in line with the actual cost of production for tanned hides in Madras, business will come to a standstill.

(Continued from page 105)

Germany's dictator. At one time, also a brief while ago, Herr Feder's Socialist slogans, such as breaking interest bondage, confiscation of war profits, abolition of multiple stores and nationalisation of business, were on every Nazi lip; and those who have a fancy for political anticipations thought Herr Hitler's promotion to the highest economic responsibilities certain. As under-Secretary of State, Herr Feder fell far short of these anticipations and his recent retirement, if it can be so called, is interpreted as a marked triumph of the big financiers who are at the back of Dr. Schacht, the Reichsbank President, and as a guarantee against any alteration in the present regime in the direction of socialism. The ways of dictatorship are uncertain; and Herr Hitler is wise, if not consistent, in steering his State in conformity with economic breezes which may develop into a gale. And there are many breezes, besides economic, which are on the offering of Nazi Germany.

STATISTICAL INFORMATION

GOLD EXPORTS

Bar gold valued at Rs. 59,04,972 was exported from Bombay during the week ended January 5, for Europe and America with the option of deliveries to London, New York, Paris, and Amsterdam.

The total gold exports since Britain went off the gold standard now amounts to Rs. 2,13,48,74,436.

WORLD PRODUCTION OF GOLD

The world production of gold in 1933 reached nearly 25 million ounces.

This figure is about the same as for the year 1932.

India, with a production of 336,000 ounces shows an appreciable increase over 1932 but on the whole the Empire's production shows some decline as compared with 1932.

Of the foreign countries producing gold Soviet Russia is believed, states the report, to have been responsible in 1933 for between 2,200,000 and 2,700,000 ounces.

MADRAS RAW COTTON STATISTICS

According to the report from the Director of Agriculture, the receipts of loose cotton at presses and spinning mills in the Madras Presidency from 1st February, 1934, to 28th December, 1934, amounted to 584,031 bales of 400 lb. lint as against an estimate of 441,800 bales of the total crop of 1933-34. The receipts in the corresponding period of the previous year were 461,442 bales. 309,983 bales mainly of pressed cotton were received at spinning mills and 226,234 bales were exported by sea while 44,952 bales were imported b ysea mainly from Karachi and Bombay.

UNEMPLOYMENT IN BRITAIN

The Ministry of Labour estimates that on 17th December there were approximately 10,248,000 insured persons, between ages of 16 and 64, in employment in Great Britain. This was 36,000 more than on 26th November, 1934 and 237,000 more than on 18th December, 1933.

There was a further improvement in employment during the month in coal mining, cotton and motor vehicle industries and in distributive trades. Some improvement was also recorded in the engineering industry and in hotel and boarding house service.

There was a decline in employment in building, pottery, woollen and worsted, hosiery and boot and shoe industries.

On 17th December, the number of unemployed persons on the registers of the employment exchanges in Britain totalled 2,085,815. This was 34,970 less than the year before. The total comprised 1,686,507 men, 56,277 boys, 2,99,192 women and 43,839 girls.

CO-OPERATION IN MADRAS

Loan and Surpluses

There was a contraction in the loan transactions of central banks which amounted to Rs. 84.77 lakhs against Rs. 92.57 lakhs in the previous year. The loan transactions of the Provincial Bank in consequence fell considerably in the year. The surpluses have also been reduced in the central banks from over a crore of rupees at the end of 1932-33 to Rs. 54 lakhs at the end of the year under report, as a result of the measures adopted by the banks at the instance of Government.

Compared to 1932-33, a rather larger number of societies were newly registered while the registration of fewer societies was cancelled in the year. Presumably this decrease is due to the fact that a number of dormant societies have already been weeded out. This reduction also seems to be due to the fact that a number of societies resorted to the method of voluntary supersession of their panchayats. The Registrar reports that as many as 244 societies took steps to supersede their panchayats voluntarily, so that attempts might be made to improve the affairs of the society, and, if possible, to avert its final cancellation. The number of such societies at the end of the year was 591, as against 396 at the end of 1932-33. There was a small reduction in the amount of loans disbursed by agricultural societies from Rs. 92.37 lakhs in 1932-31 to Rs. 92.16 lakhs during 1933-34.

The transactions of non-agricultural societies improved and slightly better profits were earned during the year under review.

In paragraph 39 of the report the Registrar refers to the working of the industrial and credit societies started in 1932-33 with the object of manufacturing sugar. Some of these societies have not yet begun real work. The Government watch with interest the working of these enterprises. The South Indian Insurance Society made considerable progress in the year.

Land Mortgage Banks

There has been a steady progress in the transactions of the Central Land Mortgage Bank. It issued during the year debentures to the extent of Rs. 24,79,500 against Rs. 10,81,400 in 1932-33. Seven new primary banks were registered during the year. The primary banks were able to grant loans to the extent of Rs. 14.78 lakhs against Rs. 10 lakhs in the previous year, and succeeded in repaying their obligations to the Central Bank completely. It has to be noted, however, that the amounts collected by primary banks, particularly in respect of principal, were inadequate ; the balances overdue have increased by more than Rs. 58,000 and by approximately Rs. 11,000 under the heads of principal and interest.

S. I. RAILWAY EARNINGS

The following are the approximate traffic earnings of the S. I. Railway for the week-ended 29th December, 1934: —South Indian (Combined), Rs. 9,30,614 ; Shoranur-Nilambur Railway, Rs. 2,672 ; Travancore Railway, Rs. 33,636 ; Shoranur-Cochin Railway, Rs. 28,024 ; Podanur-Pollachi Railway, Rs. 4,117 ; Tinnevelly-Tiruchendur Railway, Rs. 6,673 ; Pondicherry Railway, Rs. 2,168 ; Peralam-Karaikkal Railway, Rs. 2,481 and total Rs. 10,12,978. The figures for the corresponding week of last year were: Rs. 9,22,411 ; Rs. 2,550 ; Rs. 2,592 ; Rs. 33,757 ; Rs. 27,418 ; Rs. 4,251 ; Rs. 6,782 ; Rs. 2,147 ; Rs. 2,412 and total Rs. 10,04,320 respectively.

TATA IRON AND STEEL

Messrs. Tata Sons Limited, agents for the Tata Iron and Steel Company, Limited report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of December 1934, was:—

Pig Iron	...	...	83,400 tons
Steel Ingots	...	...	70,500 tons
Finished steel	...	...	60,800 tons

DECREASE IN REVENUE IN DECEMBER

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of December, 1934 amounted to Rs. 4,34 lakhs as against Rs. 4,82 lakhs in the preceding month and Rs. 3,99 lakhs in December, 1933. The total revenue realized in the nine months ended December, 1934, was Rs. 39,35 lakhs as compared with Rs. 36,33 lakhs during the same period last year.

Import duties accounted for Rs. 28,80 lakhs of this amount, export duties for Rs. 2,97 lakhs, excise duties on motor spirit, kerosene, sugar, matches and steel ingots for Rs. 3,69 lakhs, Rs. 2,19 lakhs, Rs. 37 lakhs, Rs. 85 lakhs and Rs. 3 lakhs respectively and Land Customs and Miscellaneous for Rs. 45 lakhs.

Increases were noticeable under import duties on cotton fabrics, motor cars, kerosene, metals other than iron and steel etc., silver bullion, coin, sheets, plates and other manufactures, artificial silk yarn and thread, tobacco, cotton hosiery, dyes derived from coal tar, pneumatic rubber tyres and tubes, railway plant and rolling stock, oils, batching, fuel and lubricating, wireless reception instruments and apparatus, cotton, raw and tin, block ; excise duties on motor spirit and kerosene also showed noticeable increases.

On the other hand, import duties on sugar, silk fabrics, cotton yarn and thread, betelnuts, boots and shoes motor spirit, tea, paper and stationery, machinery, toys, games and sports goods, liquors and spices, the export duties on rice, jute, raw and manufactured and land customs receipts showed noticeable decreases.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning,

The session was again a short one as there was again three working days upon which to comment—Monday and Tuesday being holidays owing to Id-Ul-Fitr. Jute mills shares again monopolised the attention of the market and boom conditions have obtained. Government securities ruled firm on account of the renewed activity in India Government's sterling securities in London, but bidding was on the whole, on a restricted scale. Cotton shares continued dull and uninteresting while among coal a considerable activity has developed among certain popular stocks and important price movement took place. Among Miscellaneous there was no outstanding feature,—public utility and engineering companies shares were in better demand, sugars on the other hand remained neglected. Teas continued dull and only a minimum of business was reported. Rubber shares were firm owing to the rise in the prices of the commodity.

Government Securities.—On account of renewed activity in India Government's sterling securities in London, rupee securities ruled very steady inspite of the tighter money conditions. Trading was, however, on a very limited scale as most of the attention of the market was centred round the jute section. 3½ per cent. Rupee paper was quoted round about Rs. 98-8 while 4½ per cent. 1955-60 remained very steady at Rs. 117-4, 3½ per cent. Loan 1947-50 was a shade easier at Rs. 102-10. 4 per cent. 1960-70 remained unchanged at Rs. 111 and 5 per cent. loan 1945-55 at Rs. 119-6. Of the provincial loans 4 per cent. 1948 Punjab bonds improved to Rs. 106-10. Other loans remained almost unchanged at last levels. The Bank rate was 3½ per cent.

Fixed Interest bearing Securities.—The usual demand for Jute Mills and well secured Industrial Preference shares continued but business was very much restricted owing to the fact that the operator's attention was mostly centred round the great activities in Jute section. The same remark might be applicable to debentures also where only a very limited business was put through.

Other Investment Stocks.—Owing perhaps to shortage of scrips Imperial Banks Fully paid-up shares were taken off the market upto Rs. 1,675 and Contributories were marked upto Rs. 423. At the time of writing however, the prices are somewhat easier at Rs. 1,660 and Rs. 415 respectively. Central Bank's shares were very steady at Rs. 35-4.

Railway shares did not attract much attention of the market and only a solitary deal was reported in Hardwar-Dehra at Rs. 116 Buktiarpur-Bihar was wanted at Rs. 69 but due to absence of sellers no business was reported so far. Among other transport companies shares Bengal-Assam Steamship (ordy.) changed hands at Rs. 219 ex dividend and India General Navigation and Railways (ordy.) was marked at Rs. 119. Calcutta Landing and Shipping accounted offer a deal at Rs. 14-8. Among Insurance companies Concord of India kept very steady at Rs. 12-14 Premium while Triton was marked up further to Rs. 223.

Cottons.—Dull conditions have obtained in this section and no business was reported up to the time of writing of these notes.

Coals.—The activity, here, was as usual, centred round a few popular stocks as Equitables, Hurriladih and New Manbhoom. The former accounted for a very large trade, many thousands shares having been changing hands daily at gradually improving figures. The quotation advanced to Rs. 37 but at the time of writing a slight reaction was apparent. Hurriladih advanced to Rs. 15 from a quotation of Rs. 12-8 and New Manbhoom improved further to Rs. 66 but at the time of writing there are sellers at Rs. 65-4. Among others Bengal improved to Rs. 265, Burrakur (ordy.) to Rs. 14-4, Sendra to Rs. 13-12, Standard to Rs. 29 and West Jamuria to Rs. 10. Amalgamated kept steady at Rs. 23-12 without much business passing. Pench Valley and Raneegunge also remained steady at Rs. 50 and Rs. 35 respectively.

Coals.—Among lower-priced stocks Aldih was in some demand and changed hands up to Rs. 3-15. Mundulpore was very popular and the rate advanced to Rs. 5-6 while Talcher remained steady at Rs. 2-4.

The result of the tender for Railways Coal is expected to be announced shortly and in the meantime rumour is afloat that some of the big concerns are assured to get good contracts. Nothing yet is known about the Government's intention about the Restriction of output and regarding the long distance freight charges. The improvement in the price of slack coal has, however, given an impetus to the industry in general.

Jutes.—The market opened very strong on Wednesday morning after two days holidays and feverish activity prevailed on the publication of the report that the sowings of Jute crop in 1935 will be annas five less than that of 1934. Raw Jute was pushed up to Rs. 35-8 but there was no corresponding movement in the prices of the Hessians which was at one time only touched Rs. 9-2. Howrahs, after opening at Rs. 62-12 on Wednesday advanced sharply to Rs. 66-4 on Thursday partly due to speculative buying and partly on account of 'bear' covering, when a reaction followed and the rate at the time of quoting is Rs. 65-6. Kamarhatty fluctuated between Rs. 652 and Rs. 697. Among others Anglo-India advanced to Rs. 575, Naihati to Rs. 543, Barnagore to Rs. 237, Fort Gloster to Rs. 785, Ganges to Rs. 570 from a quotation of Rs. 440, Gourepore to Rs. 920 from a quotation of Rs. 725 and India to Rs. 620 from a price of Rs. 500.

Remarkable advances were registered in shares of Inchcape group many of which did not attain such figures even during the post-war boom period. Comparatively less attention was paid to Bird-Heilgers and Yule groups, the reason for which is difficult to account for. At the time of writing the line is somewhat easier owing to the fall in the prices of Raw Jute and Hessians and some selling from Bombay side. The undertone, however, remained very strong and optimistic and not much set-back in prices is anticipated.

Electricals.—Public Utility companies have come in for more attention and demand on investment account continued. Quite a fair business was reported. Benares changed hands upto Rs. 14-8, Agra at Rs. 128, Jubbulpore at Rs. 13, and Patna at Rs. 17-4.

Engineerings.—A definitely better feeling was apparent in this section and most of the shares were enquired for. Both Bengal Iron and Indian Iron and Steel were better. The former are now quoted at Rs. 4-10 and the latter at Rs. 8-10. Towards the close however, some setback was noticeable in Indian Iron and Steel and the rate receded to Rs. 8-2. Burn & Co., (ordy.) kept steady at Rs. 324 and Indian Galvanizing at Rs. 75 and Marshalls at Rs. 2. Tata Iron and Steel (ordy.) advanced to Rs. 118-8 and Kumardhubi Engineering (ordy.) at Rs. 3-10. Some capital appreciation is expected in the last named before long.

Sugars.—Although prices kept steady, interest in sugar shares have disappeared considerably in view of the doubtful prospects of the industry partly owing to the competition of the new concerns and partly due to the operations of the Excise duty. Cawnpore Ordinary remained steady at Rs. 35-8, Champaran at Rs. 21-10, Carew & Co., changed hands at Rs. 21-8 and Balaram at Rs. 18-14, Murree Brewery was quoted at Rs. 204.

Miscellaneous.—This section disclosed no fresh features and only the usual business was reported. B. I. Corporation Ordinary advanced to Rs. 3 while Burma Corporation was easier at Rs. 6-6. Ivan Jones was marked at Rs. 2-10 and

British Ceylon Corporation ordinary at Rs. 10-4. Among Paper Mills shares India Paper Pulp advanced to Rs. 150. Midnapore Zamindary ordinary kept steady at Rs. 77 and Humayun Properties at Rs. 14.

Teas.—Only two deals were reported. Bishnauth changed hands at Rs. 32-4 and Tezpore ordinary at Rs. 10-4.

Rubber.—The undertone remained firm as a result of the improvement in the prices of the commodity but only a small business was reported.

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent)

Bombay, Friday,
January, 11, 1935.

Money Market.—The market was steady throughout the week with inter bank call quoting 3½ per cent. though at the close business was done slightly lower at 2¾ per cent.

Exchange.—Remained very steady with Banks selling T. T. at 1s. 6 5/64d. for near delivery; 1s. 6 1/16d. upto February; 1s. 6 3/64d. for March; 1s. 6 1/32d. for April-May; and 1s. 6d. for June-December. Banks were buying three months bills at 1s. 6 9/64d.

Securities.—Inspite of the strength in India Sterling Stocks, Rupee securities are slightly easier with 3½ per cent. Paper at Rs. 98; 3 per cent. 1941 was lower at Rs. 101; 1947-50 were down by a few points at Rs. 102/6; 60/70 quoted Rs. 110/15; 55/60 closed at Rs. 117/4 whereas 1945-55 closed at Rs. 119/4 compared with Rs. 119/8 at the beginning of this week. 1935 quoted Rs. 101/6; 1939/44 Rs. 108/1; 40/43 Rs. 109/5; 38/40 Rs. 109; Bombay Development Rs. 103/7.

Shares.—Share market ruled steady throughout the week though at the close presented a quiet appearance

Textiles.—Textiles also closed easier in sympathy with the general trend of the market. As reported last week, we do not favour fresh purchases of Cotton Mills shares at present. Bombay Dyeings closed easier at Rs. 935; Central Indias at Rs. 382/8; Centuries at Rs. 314/8; Colaba at Rs. 148/12; Gokak at Rs. 296/4; Indian Bleaching at Rs. 153/12; Indore Malwa United at Rs. 108/12; Kohinoor at Rs. 225; Lakshmi Rs. 835; Morarji Rs. 1525; New Great Rs. 219/6; Sholapur Rs. 2900; Simplex Rs. 103; Swadeshi Rs. 229/6; Vishnu Rs. 1,500. There was some activity in New Great Eastern Mills' shares on rumours of the Company clearing off arrears on its Preference shares and they were around Rs. 225 though closed as above.

Hydro Electrics.—The earnings figures of the three Hydro Electric concerns for December last were much better than previous months earnings. Hydros which were around Rs. 182/8 are now at Rs. 178/2. Andhra Valleys which were around Rs. 1725 closed easier at Rs. 1710. Tata Powers were done as high as Rs. 1545 though closed at Rs. 1535.

In spite of our optimistic view about future of Tata Power Company we think the present price of shares discounts the potentialities of the company in the coming years and we therefore, do not advocate fresh purchases.

Iron and Steel.—Steel shares though active at the beginning of the week, evinced easy tendency during the latter part of the week and closed easier with Deferreds at Rs. 513/2 and Ordinaries at Rs. 115/12 though they were done as high at Rs. 535 and Rs. 119/4 respectively. Second Preference shares were quoted Rs. 175 but closed easier at Rs. 170/8 on the news of of the postponement of ad-interim dividend on same. In postpoing the payment, the Directors seem to have in mind the holding of annual meeting early in June or July. Since there is a fair chance of removal of sur-charge on income tax, Second Preference holders stand to benefit by getting full payment after a few months. Cost of the Excise duty is more than earned by further reduction in the cost of production and the Company is now reported to be in much better position than before the imposition of the excise duty and therefore maintain the same constructive attitude as before.

Cements.—Cement shares practically were steady during this week. Indian closed at Rs. 381/4; Bundi Rs. 38/4; Gwalior Rs. 27/2; Shahabad at Rs. 373/12; United at Rs. 69. Many of the concerns are reported to have earned much better for 1934 than 1933. Though the likelihood of excise duty on the production of cement in the next Budget is not to be lost sight of, Cement consumption is so rapidly increasing that in the coming months the factories will have to work on larger quota than at present which will naturally reduce cost of production. Thus, the outlook for cement industry is brighter.

Miscellaneous.—Bombay Burmas were done as high at Rs. 415 and closed at Rs. 408/12; Tata Contructions were done as high at Rs. 94 and are marking time around Rs. 91/8. British Burma Petrols were steady around Rs. 3/14. We advocate purchases of Scindhias around Rs. 14/14. Belapur Sugars were done as high at Rs. 266 though closed at Rs. 264/8. Bombay Steams closed at Rs. 319/6; Telephones at Rs. 118/4; Trams at Rs. 164/12.

Banks and Insurance.—Bank shares were featureless during this week. Central Banks were done as high at Rs. 42/8 and are now at Rs. 39/6. Imperial Banks Partly paids closed at Rs. 417/8 and Fully paids at Rs. 1675. Barodas quoted Rs. 107 and Union at Rs. 5/15.

New India Assurance were done as high as Rs. 48 but closed at Rs. 46/12. Fresh commitments are not advisable at current level. Oriental Life were higher at Rs. 4510.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, January 10.

Government Securities were dull but steady. In banking shares Imperials were slightly easier; mill remained firm but teas continued neglected.

3 per cent. 1941 quoted Rs. 101-4; 3½ per cent. Rupee Paper Rs. 98-5-6; Bank of Mysores were quoted at Rs. 277-8; Imperial Banks fully paid ups at Rs. 1,663; Contributories at 417-8. Buckinghams Ordinary were quoted at Rs. 210, Cambodias at Rs. 13-8; Cochin Malabars Ordinary at Rs. 1-12, Mysore Sugars at Rs. 22-12 and Nilgiri Nerugundi Debentures at Rs. 104.

LONDON STOCK EXCHANGE

During the week under review there has been healthy activity in all the sections of the Stock Exchange. Gilt-edge continued firm throughout. Several price advances were recorded both in Indian Loans and Home Funds. On Thursday 3½ per cent. Indian Stock was quoted at 99¾, 2½ per cent. Consols at 93 7/8 and Victory Bonds at 119½. Amongst other sections Oils have shown considerable improvement during the week. Burmas and Shell Transport were quoted at 75 and 49/4½ respectively on Thursday over 71/10½ and 45/7½ of January 3. Teas changed hands at better prices and Rubbers were steady. Minings were irregular and Industrials were well-supported.

NEW YORK STOCK EXCHANGE

The market was steady though weak. We specially recommend Steels and Aviation stocks like United States Steel, Bethelhem Steel, Inland Steel, National Steel, Bendix Aviation and Sperry Corporation. U. S. Steel are operating 36 per cent. General Motors sold 4200 units for January. National City Bank declared 50 cents dividend and Standard Oil of New Jersy 1 dollar.

THE BARASET-BASIRHAT LIGHT RAILWAY CO., LD.

Report of the Directors for the Sixty-first-Half-year ended 30th September, 1934 :—

The Directors have pleasure in submitting the audited accounts for the half-year ended 30th September, 1934.

1. *Length of Line*—The route mileage of line open for traffic at the end of the half-year was 52.35 miles. The mileage opened for traffic during the half-year was nil gauge 2'—6".

2. *Capital Expenditure*—The total Capital Expenditure to the close of the half-year was Rs. 25,52,913 plus Rs. 22,680 on stores, or Rs. 25,75,593 in all. The Capital Expenditure during the half-year was Rs. 4,457 on Locomotive Headlights.

3. *Earnings*—

(a) *Gross Earnings*—The gross earnings during the half-year were Rs. 2,30,686. During the corresponding period in 1933 they were Rs. 2,48,126. There is a decrease of Rs. 17,440 or 7.02% as compared with the corresponding period in 1933.

4. *Net Revenue*—The balance of Net Revenue is :—

	1934 Rs.	1933 Rs.
Net profit	26,894	33,388
Balance brought forward ...	76,359	65,550
Total	1,03,253	98,938

5. *Dividend and Balance*—The Directors regret that they are unable to recommend the payment of any dividend for the period under review, in view of the severe decrease in earnings. They, therefore, recommend that the balance Rs. 1,03,253 be carried forward. The dividends paid for the two preceding half-years were at the rate of 4% per annum.

THE BANK OF BARODA, LTD.

The net profit of the Bank of Baroda Ltd., for the year ended 31st December, 1934, subject to audit, including the sum of Rs. 55,891,-5-1 brought forward amounts to Rs. 5,03,127-2-6. An ad-interim dividend at the rate of 10% per annum was paid for the half-year ended 30th June, 1934 which absorbed Rs. 1,50,000. The Directors now propose to pay a final dividend for the half-year ended 31st December, 1934 at the rate of 10% per annum free of income tax and to transfer Rs. 1,00,000 to Reserve Fund raising that Fund to Rs. 22,50,000.

BANK OF HINDUSTAN, LD.

1934 Results.

We understand that the Gross Earnings of the Bank of Hindustan Ld., Madras, for the year ending 31st December, 1934 is Rs. 2,30,192-7-6 and after deducting the Expenses, on account of Depositors' Interest, Establishment, Rents, etc., amounting to Rs. 1,77,639-3-9 and after making allowance for Depreciation on Furniture and providing for Bad and Doubtful Debts, etc., the Net Profit is Rs. 52,553-3-9 which, with the sum of Rs. 9,249-15-11 brought forward from the last half-year amounts to a total of Rs. 61,803-3-8 and this sum is available for distribution.

HUMAYAN PROPERTIES, LD.

The Directors have pleasure in submitting the Audited Accounts of the Company for the year ending March 31, 1934. There is a profit on Revenue Account of Rs. 1,82,711-13-6 which is carried to the Profit and Loss Account. After adding thereto the balance brought forward and after allowing for Debenture Interest and standing items there is a balance of Rs. 1,54,732-15-0 which we recommend should be dealt with as follows:—

	Rs.		
To Depreciation accounts	38,648	0	0
To Dividend at 15 per cent. per annum (free of tax)	67,605	0	0
To Balance carried forward	48,479	15	0

An interim dividend at the rate of 5 per cent. has already been paid and, if the recommendation is accepted, a final 10 per cent. per annum will now be paid.

The Company's property has been fully maintained. The arrangement for film supplies have been extended during the year. The Company's business continues to be satisfactory, and the Directors are maintaining their progressive policy both in Calcutta and also throughout India, Burma and Ceylon.

Messrs. A. de Bois Shrosbree, Mark Leslie, K. W. Leslie, F. Graham Bros. and F. C. Brasher—Directors.

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A PRACTICAL GUIDE TO CURRENT PROBLEMS.

The Joint authors of *Indian Finance Year-Book, 1934*, were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetry and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented depression has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year Book, 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934."

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

WORLD OF INDIAN FINANCE

Calcutta, Jan. 18.

Money has been a shade less stringent towards the week-end, call money having been done at 2½ per cent. on Friday, as against renewals at the rate of 3 uer cent. done only yesterday. But in the greater part of the week rates higher than 3 per cent. have ruled both in Bombay and Calcutta. There is thus no mistaking the fact that, so far as this season is concerned, firm money has come to stay. As we have been stressing during the last two weeks, a relapse into easy money is far from easy. Not only has trade demand come to exceed the resources of the market, but there is reason to believe that money has flowed into the districts for its principal function of moving the crops. The time-lag involved in the return of such funds from the mofussil to the principal monetary centres is, indeed, such that, so far, at any rate, as these amounts are concerned, they will not replenish the stocks in the money markets till the cold season is nearly run out. One might, therefore, look for the continuance of stringent money conditions. It must be remembered, however, in this connection that much of the funds that have gone into the mofussil may well find their way back to the cities through official channels. In the present state of economic prosperity in the upcountry areas, it is by no means impossible that the Government's demands for revenue in this part of the year will be met largely from this source. The financing of the movement of crop lies in the payment of money to the agriculturists; and as agriculturists are far from affluent, it is conceivable that they return a part of these funds to the Treasury in payment of the Government's demand on account of land revenue. In that case, the return of funds that have now gone into the mofussil will be quicker than one can expect in normal conditions. The reasoning on these lines is somewhat too far-fetched and it would be unreasonable not to expect the present firm money conditions to continue for some time more.

The material difference between the conditions of this year and the conditions of recent years consists in the appreciable rise that has occurred in prices of agricultural commodities in India. The important staples that require to be financed at this part of the year have gone up in value. The general outlook of trade is such as to induce briskness in the movement. Though foreign trade still leaves much to be desired, exporters would not mind speeding up the movement of the principal commodities from the agricultural areas to the ports. This suggests that the efflux of money from the principal centres into the mofussil may be increased.

The present outlook of money is seen in the discouraging results of the last Treasury Bills auctions. The market's applications for Treasury Bills were only Rs. 2¼ lakhs in excess of the amount offered; and the average rate of accepted tenders has also gone up steeply from Rs. 1-9-9 to Rs. 1-12 per cent. Sales of intermediates between January 10 and 14 amounted to a small sum of Rs. 2¾ lakhs. This contrasts with the sales of Rs. 105 lakhs effected in the previous week. The fall in the sales of intermediates is attributable to the extreme shortage of funds in the money market. That, in spite of the increase in the tap rate from Rs. 1-7 to Rs. 1-8 per-cent., sales of intermediates should have fallen off so steeply shows that the market was not in a position to take advantage of the better yields on Treasuries. This has been confirmed by the low applications for Treasuries on Tuesday last. The market was well in a position to guess, in the light of the stringency of last week, that the yield on Treasury Bills should be much higher than before and that the average rate of accepted tenders should go up appreciably. Though we expected better sales of Treasuries at the tap rate than have actually taken place, we also expressed the fear that the stringency of money felt last week might make a material difference. The pinch has been much greater than we apprehended, with the result that during the last two weeks the Government have taken little more than the usual weekly amounts on auction.

It must also be mentioned at this stage that this period has not been one of heavy maturities of Treasury Bills. After the payment of Rs. 1⅛ crores on January 12, there is only a small amount of Rs. 16¼ lakhs which are maturities of intermediate bills, and which are spread over the period January 10 to 23. The next considerable instalment of Treasury Bills maturities is on January 27, when Rs. 1½ crores falls due. Thus, during the latter half of January the market will not have any considerable efflux of funds on account of maturities of Treasury Bills, and the middle of January is particularly free from them. In attempting to estimate the effect of monetary stringency on sales of Treasury Bills, this absence of maturities during this period ought not to be overlooked. Nevertheless, it will make no difference in any forecast of Treasury Bills sales either on tap during January 16 to 21, or in the auctions of next week. It seems quite possible that the very high tap rate of Rs. 1-10 per cent. will go largely unheeded by a market which will not be in a position to take any large amounts of Treasuries at that rate. Considering the low maturities of Treasury Bills and the possibly low sales of bills, it may be said that, so far as the middle of January is concerned, Treasury Bills will not alter the Government's ways and means position considerably either way. This means that ways and means adjustments will be met largely from other resources. Such a position has been engineered by Government apparently in consideration of the fact that with the New Year they will be in a period of appreciable surplus of incomings over outgoings. Even towards the end of December, we suggested that the Government were having better experience of revenue collections. The continuance of this good fortune may enable them to make reductions in the ways and means advances which they had taken from the Imperial Bank of India.

According to the last published statement of the Bank, the Government's ways and means advances have been reduced by Rs. 2 crores to Rs. 7 crores during the week ending January 11. In spite of this reduction in the ways and means advances, Public Deposits have been well maintained at Rs. 7.56 crores, at which figure it shows a decrease of only Rs. 68½ lakhs from the previous week. As this period is not one of a surplus on Treasury Bills account, one has to deduce that the Government have continued to enjoy substantial revenue collections. It is to be wondered whether it will be possible for Government to wipe out the whole of the ways and means advances in the coming weeks by this same means. For there is no reason to think that during January there will be any substantial surplus on Treasury Bills account which the Government can utilise for their purpose.

Government Securities are still under a cloud. 3½ per cent. paper touched as low as Rs. 97-11 ; and the mood of the market is such that but for certain favourable factors, even lower levels would have been touched. We have, we believe, prepared our readers for this phase of the giltedge market and endeavoured to enable its proper appraisement. It may be said, generally, that lower prices have been avoided mainly because of the state of the London market and the nature of London advices. In spite of the fact that India sterling securities have not put on fresh increases, there is no mistaking the tone underlying them. With 3½ per cent. Paper steady at £100, it is, indeed, unthinkable that the corresponding Rupee securities should go much below the level of Rs. 98. It is true that at the moment the market has no go in it ; but it cannot be lost upon operators and investors that nothing has happened since the beginning of December to alter the basic outlook of giltedge and that, therefore, the utmost that can happen is small oscillatory movements roundabout Rs. 98. In fact, during the week 3½ per cent. has recovered and come up to Rs. 98-4 with a fair amount of buying enquiry in evidence.

The greatest impediment to giltedge would now seem to be the persistence of tight money conditions. The inter-play of this factor was foreseen even during the middle of December ; but it was then expected that monetary stringency would not develop to the point of bringing about a fall in giltedge prices. But this week has shown that in the present position of the giltedge market, prices might vary with the changes in money. The recovery that has occurred on Friday bears the trace of the mitigation of stringency which we referred to in the beginning of this article. The opinion is ventured by some sections of the market that, till the present stringency felt by the money market disappears, giltedge prices are bound to move in sympathy with the money rates. It may also be mentioned here that the rise in the yield on Treasury Bills, which has occurred during the last week is by no means helpful to a rise in giltedge. Our readers are aware that we have always recognised the relation between Treasury Bills rates and prices of Government securities. Considering that the Government have not benefitted much from the increase in Treasury Bill yields and that, in spite of such increased rates sales of Treasury Bills have been at a very low ebb, it is to be wondered whether the Government would not be well advised to give the requirements of giltedge some consideration in shaping their Treasury Bills policy.

In the present mood of the giltedge market there is a tendency to exaggerate even remote contingencies of adverse developments in the future. It has been suggested to us that the market is apprehending the early conclusion of a stabilisation agreement among France, Great Britain and the United States, and that such agreement must have adverse effects on giltedge. It, perhaps, requires to be explained that those, who indulge in these fears, believe that in the stabilisation agreement is involved the maintenance of the exchanges at prescribed levels and that Great Britain would not be free to follow the cheap money policy, to which she has been wedded since the abandonment of the gold standard, and that there might, conceiv-

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

Thursday evening.

The New Year is not sufficiently advanced to give any clear indication of the trends of international finance in 1935. But an inkling of the changes that might occur in the principal countries is already available. So far as Britain is concerned, it is a long time since she extricated her monetary and exchange policy from its position of extreme dependence on the action and policies of other nations. In the stress and storm of 1932, she succeeded in framing a policy to which she could adhere to in spite of the vagaries of foreign nations. And the chief merit of that policy is that, while it suits the requirements of Great Britain admirably, no one can charge the British monetary authorities with further complicating the international situation, and handicapping the return to normal condition, either through a natural process of readjustment, or through a conservative international action. It is well-known that this policy comprises the supply of money in adequate quantities for the requirements of internal industry, a progressive cheapening of money rates, the preservation of a certain degree of stability of sterling in terms of the purchasing power, and the ironing out of fluctuations in the foreign exchanges without any commitments in regard to the maintenance of sterling at any particular rate or level. Three years of the working of this policy has proved its wisdom. And though, no doubt, it has given rise to the problems and embarrassments for the Administration, it has proved an eminently workable solution of all the monetary problems as they are. Britain can claim with truth that she is always ready to fall in with any reasonable programme of restoring the international standard as soon as other nations are ready for it.

But this condition of other nations being ready to restore and work, according to the rules of the game, the international monetary standard is yet far from being fulfilled. To take only the great international financial triangle, Britain, France and the United States, the two latter countries have still their hands full with monetary problems of various kinds and degrees. The old year closed with France face to face with the dilemma of deflation and devaluation. The United States had appended a colossal question mark to inflation, with the Congress virtually shouting a thunderous affirmative to that interrogation. France was indecisive and those who were keen on securing an answer tried to find one in what they believed to be the inexorable course of events. On this basis, devaluation seemed to be the inevitable fate of the franc ; and any attempt to foresee the trends of 1935 had to be based on this assumption on a purely speculative nature. Only as we advance further into the New Year will it be possible to see how the United States tackles the demand for inflation, and how France will manage to escape both the horns of the dilemma referred to.

But it is somewhat fortunate that we should have so early in the year some indication of the monetary preferences of the French and the American Governments. If it is largely true that as the depression advanced and blazed its long trail, the votaries of deflation fell away one by one, then it might be said that both America and France are falling in with the general trend of economic opinion in the world. Neither country seems to be in love with deflation. In the United States it seems to be largely true that, just as Government during the last Autumn and Winter were overcoming their excessive fondness for inflation, the public is now overcoming its horror of inflation. There are signs—though, of course, on this point it is difficult to adduce any indisputable or conclusive evidence—that the American public would not be scared by the prospect of a fresh dose of inflation in the States. The new Congress, it is well-known, is strongly wedded to inflation ; and the Administration which will have to be guided, in large part, by the desires and decisions of the Congress, has already made public its resolve to continue relief expenditure on probably an even larger scale than before. The inflationary effects of this course are obvious. Sometime ago, it used to be said that the prospects of inflation were standing in the way of the nation making a further march on the road to recovery. And it was thought that such a view had its sanction in the laws of orthodox economics. But apart from the conclusions of the science, it is obvious commonsense that the prospects of recovery of modern economy as it stands, depend much more on the fluctuations of consumptive demand than the outlook of the producer. If the consumer's demand should expand, so as to reduce stocks in the market, no producer would ever think of slowing down production simply because the Administration is thought to be considering certain monetary policies. While inflation can thus be no deterrent to increased production, it ought, on the other hand, to stimulate consumer's demand. For inflation, if it means anything, means the prospect of higher prices, which should impel the consumer to hasten his purchases rather than postpone them. It is difficult to say how far the decision to continue public expenditure is the index of the truly inflationary policy of the American Government. It is quite possible that this expenditure has been decided more on grounds, of public policy, than as a measure of relief to trade and industry. But it cannot be lost upon the Administration that the only period, in which American industry and American business revived to a marked extent, was during the Spring and Summer of 1933 when the monetary policy of the Administration was not in any doubt. It is also true to say that this kind of staid adhesion to orthodox monetary policy has had its fair chance and that it has coincided with a period of setback in industrial and business activity. It seems, therefore, that the meeting of the new Congress will be signified by further tokens of readiness on the part of the Administration to inflate American currency to the required extent.

As for France, it seems increasingly sure that she will not persist farther on the path of deflation. Too significant changes are reported to have occurred during Air Mail week. The first is the change in the Governorship of the Bank of France by which M. Moret has been succeeded by M. Tannery. The second is the decision of the French Government that French Treasury Bills will be eligible for rediscount with the Bank of France. One can at first sight see little relation between these two and the larger monetary policy of the French Government. It is said that the appointment of M. Tannery has come as a surprise to people who are usually well acquainted with French affairs. The significance of the new appointment cannot be under-

stood unless it is realised that every occasion for a change in the Governorship in the Bank of France has been utilised by the French Government to place one who would be more amenable to the control of the Treasury than his predecessor. It is believed that M. Moret himself was less independent than M. Moreau. But M. Moret has this to his credit, that he dissuaded the French Treasury from making fresh inroads into the resources of the Bank of France for financing their deficit, and thus drove the French Government to seek foreign credits for the purpose. In doing this, M. Moret showed himself to be, not only a safeguard of the Bank's autonomy, but also as a votary of the deflationary policy determined to prevent the budgetary deficit from having its usual inflationary consequences. If the French Government had their way in the matter, it is certain that there would have been an increase in the floating debt which the market would have had to bear in the shape of an addition to the currency circulation. It will thus be seen that the two changes referred to in the beginning of this paragraph are closely inter-related and that together they mean that hereafter the budgetary deficit will result in additions to the floating debt of the Government. As Treasury Bills are eligible for rediscount with the Bank of France, the French banks are bound to keep the bills as part of their liquid securities.

The change in the Governorship of the Bank of France and the decision of the Government that their Treasury Bills shall be eligible for rediscount with the Bank clearly suggest that, as soon as the New Year opened, the Government have decided on currency reflation. It is significant that a large increase has already been effected in the permissible maximum of the floating debt.

In this picture of French policy, which we have attempted to construct, an important place must be given to the report that a bill has been introduced in the Chamber of Deputies by the Minister of Commerce giving France "modified codes" on the lines of the American National Recovery Administration. French conservatism, no doubt, finds its expression in the provision that agreements under the Bill must originate in, and result from, private initiative and that, in this regard, the Government can assume only the right of enforcing such agreed understandings. It is also the intention of the Government that this system of codes should apply only to those industries which are subject to grave difficulties and which play an important part in national economy, and not to the whole gamut of French industrial life. But even with this restricted scope, the proposal to apply codes to French industries makes it clear that France has taken on hand a programme of reconstruction of national industry with the favourite instruments of currency inflation and regulation of competition.

If it is true that France had decided against deflation as a means of restoring the equilibrium between the franc and the foreign currencies, one might expect the wheels of international monetary negotiation to move more fast in the near future. It is not surprising that a report appearing in the dailies of Thursday morning, contains a number of intriguing suggestions. It is pointed out in the first place, that extraordinary conditions prevailed in the London foreign exchange market on the afternoon of Wednesday last, rates fluctuating wildly without any apparent reason. The feature of the international exchanges was the strength of the dollar both in terms of sterling and in terms of Continental currencies. The Paris-New York cross rate soared well above the gold export point, thus rendering it extremely profitable to ship gold from Paris to New York. A Paris message states that the banks have stopped all gold shipments to New York in consideration of the risk of a lower price for gold on its arrival. So far as the position on Wednesday afternoon is concerned, the strength of the dollar is explained by the large scale buying movement of the dollar, consequent on the question of the gold clause coming up for final decision before the Supreme Court, and speculators endeavouring to realise the profits that will be available in the event of a decision adverse to the Administration. As for sterling, London, too, must have seen large purchases of dollar for the same reason. But the position of sterling in relation to the Continental currencies is not impaired as there was quite good Continental demand for sterling.

But what is important for our present purpose is the fertile field which is afforded for rumours of various kinds. We have already seen from the reports of the last two weeks that France is turning away from deflation and has decided on a policy of reflation. It is understandable that France should seek to hasten the process of understanding between the principal financial nations to minimise the risks of further disparity between American and French prices. It is said that Paris believes that the United States are anxious to resume discussions with London for a return to the gold standard, while M. Flandin, the French Premier, might consent to a downward adjustment of the franc in return for international currency stability and a settlement of the war debts. In New York gossip is current that an international monetary conference is likely to meet in the Autumn covering war debts and stabilisation after the adjustment of exchanges. One might well understand that London is not in a mood to indulge in speculations of this kind, for, as has been pointed out already, London can well afford to rest on her oars. The City is, therefore, harking back to the statement of Mr. Neville Chamberlain that rumours in connection with stabilisation are premature. Undoubtedly they are; but one would be blind to ignore the progress that has been made towards making some kind of *pourparlers* possible.

THE PROSPECTS OF STABILISATION

There are signs all around that international finance is again in one of those critical phases which have been none too rare since 1930. During the week, the international exchanges have been moving wildly. Sterling has risen in terms of the franc and the Continental currencies; and the dollar has continued strong in terms of sterling and the franc: in fact, so strong that the dollar is now worth more in gold than the statutory rate allows. There have been reports of the U. S. A. being ready to open negotiations with Britain, and France having made a gesture indicative of her desire to abandon her deflationary policy. It is true that they are only rumours, but the content of these rumours is not in conflict with known facts. That such rumours should seem plausible is a significant advance on those times in which they would have seemed palpably ludicrous. There is thus behind all this apparent chaos the promise of a restoration of order, however distant and slow it might prove to be.

* * *

In fact, in the more comprehensive review it is just these crises that mark so many steps on the road to recovery. We have always adhered to the view that each crisis contains within itself the seeds of a solution to the more pressing problems. Looking back over the last few years, it should be easy to recognise that every improvement in world trade and finance, which we can now boast of, is directly traceable to some crisis or other. Treating it in the chronological order, the first step out of the tangle of international indebtedness was taken when under the pressure of the failure of the credit Anstalt Mr. Hoover was obliged to declare a moratorium for all Governmental Debts. But for this action, it would have been more difficult for America's debtor nations to force the issue by suspension of payments. One might go so far as to say that the fact that Great Britain was in a position to continue to put off her war debt payments till a late stage has delayed the progress of this problem towards its inevitable solution. And when the solution comes, we may be sure that it will be directly to the necessity for the moratorium which arose from the severe international financial crisis of 1931. Likewise, the substantial advance from the depression which the countries comprised in the sterling area have made during the last three years, would have been inconceivable but for the crisis of September, 1931 in Great Britain and the consequent abandonment of the gold standard. It is needless to expatiate on the benefits which have flowed from what at that time seemed to many to be disaster. The progressive cheapening of money rates, the reduction in the volume of debts which were incurred and which were payable in sterling, the reduction in costs of production made possible by the lower interest rates and by a lighter burden of indebtedness, and above all the recovery of prices from the depths of depression—these would not have been available to world economy by any other conceivable means. The third crisis which has taken world economy nearer to recovery is the banking crisis of 1933 which occurred in America at the time of Mr. Roosevelt's advent to office. And much of what America is to-day is due to the wreck of her banking system which occurred in the Spring of 1933. We would have heard little of national recovery or economic planning but for the bold efforts which Mr. Roosevelt had perforce to make owing to the breakdown. It may, therefore, be said that so long as the present difficulties continue without developing a crisis of some sort, there is no hope of readjustment or of lasting recovery.

* * *

It is not suggested that any such severe crisis has developed either in America, France or Britain. But the relations between these three countries have developed a somewhat acute phase. It is well-known that during the last quarter of 1934 it was becoming increasingly clear that France would have to decide finally between deflation and devaluation. But it appears as though M. Flandin would continue to put his faith in a natural recovery of world prices which would restore equilibrium between the franc and other currencies and that he would not, therefore, make a final decision between the two alternatives. During the New Year, however, there have been signs of a significant change in the official policy. It is now generally admitted that the French Government have given up the policy of wait and see and have fallen in with the current ideas of working actively for recovery. There is no doubt that an active policy involves a change from deflation and the initiation of measures of help to French industry. It is not surprising, therefore, that the French Government have adopted measures of reflating the currency and providing for the elimination of competition between internal industrial units by the provision of codes on the American model. While these measures might be welcomed by the French people, they do not contribute to the solution of the problem of the relation between the franc and other important currencies of the world.

* * *

This lack of proper relation has exhibited itself in the Paris—New York exchange rising above the gold export point. At the beginning, the French banks decided not to export any gold in consideration of the fact that the American Government might decide on a change in the gold value of the dollar and there would then be a reduction in the value of the gold on arrival at New York. But latterly they have begun to export gold, but the exports are, by no means, sufficient in quantity to provide a corrective to the movements in the exchanges.

* * *

At the moment the strength of the dollar is due very largely to the question of the gold clause having come up before the Supreme Court for final decision. It is expected in some quarters that the decision might be adverse to the American Administration; and it is clear that in the event of such an adverse decision, dollar bonds which contain the gold clause would have to be paid for at the old rate. Speculators are naturally ready to take advantage of this uncertainty, and all over the world there are attempts to buy such dollar bonds. Such demand for the dollar is naturally reflected in the strength of the

American currency and the fall of the franc to the gold export point. It is indeed unfortunate that a measure so productive of good to America and the world should be open to challenge in a court of law. No one can doubt now that but for the reduction in the rate of indebtedness, which the devaluation of the dollar and the abrogation of the gold clause have made possible, America would not have recovered to the extent she has done. The rigidity of the written constitution exposes even such demonstratably popular measure to the disturbing scrutiny of the Supreme Court. We are not in a position to examine the legality of the action of the Administration and the Congress in decreeing the devaluation of the dollar and overlooking the gold clause contained in certain public and private contracts. The trouble of the written constitution is that even validation act on the part of the Congress will not do. In spite of the undoubted beneficence of this measure, it is exposed to the unsettlement of an enquiry by the Supreme Court. The Court would have to go by the law, though it is a question whether in view of the consequences of a decision adverse to the Administration, it would not be content with merely preserving the spirit of it. It is encouraging that America does not believe such adverse decision to be possible. If it should be given, she will have no option but to take steps to delimit the sphere of the Supreme Court, though this would be tantamount to altering the very basis of her constitution.

* * *

So long as the present uncertainty about the gold clause, or rather so long as the belief in the possibility of an adverse decision is entertained, the dollar is bound to wax strong with all its consquences to sterling and the franc. But it is not to be supposed that the franc would regain strength, as soon as the question is favourably settled. When the present policy of reflation gets under way, the disparity between French prices and world prices will have been enhanced and the franc rendered more insecure. The critical character of the present situation lies not so much in the movements of the exchanges as in the decision to reflate. And it is inconceivable how France could do otherwise. It is true thrat the movement for devaluation, which began in October last, has weakened; and little is now heard of it. But so has the deflationary movement. It is doubtful if there is any one in France who will face the consequences of deflation to the required extent. Only last week it was pointed out in our overseas columns that the fate of the Citroen Company must be a significant eye-opener to the people of France. It is not known whether this had anything to do with the change in official French policy. But it is significant that the changes have followed so closely on these unfortunate developments. And there is also reason to think that the relationary policy has been decided on by M. Flandin after great thought and prolonged discussions. Some of his colleagues have differed from him; and it is in the face of such dissent that the present policy has been inaugurated.

* * * *

It may be taken, therefore, that France will not return to her deflationary ways. Hence the report that M. Flandin is anxious for an understanding with the United States and Great Britain, and that he is prepared for a downward adjustment of the franc. Though all this is welcome news, from the standpoint of restoration of an international monetary standard, it is doubtful if the United States and Great Britain will so readily welcome a lowering of the franc. All these years, both these countries have been bewailing the disparity of the currencies. But it is a different thing when they get very near the prospect of a reduction of the gold value of the franc. The United States are yet to decide on the question of a further devaluation of the dollar. With the Damocles' sword of the Supreme Court decision hanging over them, the Administration will perforce have to postpone this question. The new Congress must be given some time to clarify its party alignments. But there is no mistaking the veering round of popular opinion in favour of further inflation, the handiest means of which is a further devaluation to the limit of 50 cents. The United States will not be prepared to enter into negotiations with France till she has made up her mind on this question. And it is by no means certain that agreement would be possible among the three nations on the basis of a 50 cents dollar. The present position is, therefore, highly intriguing.

* * *

But it is full of promise that the nations will make another effort at international understanding on currency and exchange. It is nearly two years since the failure of the World Economic Conference. And it is not without significance that already the belief is entertained that another conference is likely to meet before long. And what is needed is that the Governments should command faith, in the possibibity of an understanding. It should not be forgotten that the effects of changes in currency and exchanges on foreign trade and industrial competition have been reduced a great deal since the middle of 1933, when the World Economic Conference broke up. For its failure was the signal for economic nationalism to rise up and it has been rampant in almost all countries of the world since that time. Quotas and import restrictions have been adopted. There have been innumerable trade treaties which have put on a definite basis the commercial relations

between the countries concerned. It is not to be supposed that the differences in competitive capacity consequent on changes in the exchange value of currencies wil be fully felt. The nations can, therefore, attempt the task of regularising international financial relations without the fear of unsettlement in their internal economies.

RETURN OF THE SAAR

The peaceful issue of the Saar plebiscite marks an advanced stage in the recovery of Europe from the follies of Versailles. For eighteen years the world has staggered under the wrongs and blunders of the Allies ; and it looks as though only Time can repair the ravages of the war and the more bellicose peace which ended it. But of all the blunders, which cried aloud for redress, the separation of the Saar from Germany has had a peculiar significance owing to the circumstances in which the plebiscite had to be carried out. The Allied nations could never have been in doubt as to the result of a referendum among the Saarlanders. The dismembering of the Saar from the Fatherland and its constitution into a separate administrative unit under the Governing Commission of the League of Nations was the result of a crude compromise between French vindictiveness and the compunctions of her comparatively unsophisticated allies. It was clear from the beginning that France only wanted to postpone, as long as possible, the recovery of German prestige from the shadow of defeat. But during the last year or two, doubts have been sedulously cast on the readiness of the Saar to return to the German fold. The reason adduced was that those Germans, who were fortunate enough not to come under the Nazi heel, would suddenly come to regard the Treaty of Versailles as a blessing, whose disguise consisted in two decades of unpredictable history.

Undoubtedly, this thought had nothing to rest on except the wish of the thinkers. But they were optimistic enough to hope that by the time the Saarlanders would have to exercise these votes on this momentous question, Nazidom would have made itself so execrable that the Saar would at least decide on a continuance of the *status quo*. When an interested party reasons on these lines, one might be sure that it would not stop with armchair speculation. And, likewise, it is too much to expect that Germany will, in her present mood, leave such propaganda without an answer. For months, there have been reports of attempts on the part of the Nazis to coerce the waverers in Saarland into voting for a return to Germany. The method of coercion may be easily imagined. It was then left to be understood that, as the plebiscite would largely be in favour of a return and that when the Saar comes under the administration of the German Reich, the Nazis would see to it that the recalcitrants were properly dealt with. It was expected on the other side that such threats, far from intimidating the Saarlanders, would only have the result of stiffening opposition. All these speculations obviously underrated the strength of the nationalist sentiment which has been outraged by enforced separation from the mother country, and which has all along looked forward to a particular date for the automatic satisfaction of their nationalist instincts. In such a position opinion in the Saar can hardly be swayed either by the exaggerated reports of Nazi excess or even by such lapses as the Nazi Government might have been guilty of. There has thus never been any solid reason why the Saar should vote for the continuance of the *status quo*, not to speak of coming under the rule of France. Though the issue was not in doubt, it was feared that the enthusiasm in both camps would precipitate an ugly conflict which might prove to be a starting point of further misunderstanding and quarrels between the Powers. It speaks well of the care, with which the Governing Commission has carried out its duties, that popular voting on such a crucial question could have been conducted without any disorders worthy of mention.

* * *

Though the people have passed their verdict decisively for a return to Germany, there is still a bunch of problems to be solved before such return can be effected. During the last few days, it was reported that France was endeavouring to lay down certain conditions to such return. While it is, unquestionably, difficult for France suddenly to acquiesce in the return of the Saar as a *fait accompli*, France can expect little support in international opinion for insisting on Germany satisfying all her demands in respect of demiliterisation. It is true that the Saar is a part of the area which, according to the Treaty of Versailles, ought to be demiliterised in order that France might feel the safer. But it is quite conceivable that France might demand measures of demilitarisation which might impair the industrial equipment of this area. It is said that France insisted on the destruction of the strategic railways and even landing places for troops and, in fact, everything that is of potential strategic value. A later report suggests that a tentative agreement has been arrived at between Germany and France on the issues connected with demilitarisation of the Saar. It may, therefore, be expected that the retirement of the Governing Commission from the Saarland and the handing over of this area to the Government of Reich will be accomplished according to programme, that is by the first week of March.

MACKINNON MACKENZIE & CO., CALCUTTA

THE

TRAVANCORE NATIONAL BANK, LIMITED

(Incorporated in Travancore 1912)

SHARES

The public are informed that the newly Issued Capital of Rs. **TEN LAKHS** has been over subscribed and the Directors do not propose to issue any more shares.

The Issued and Subscribed Capital is now Rs. 20,00,000.

So far as the League is concerned, it cannot altogether abandon all its functions. That Germany is in no love with the League only enhances such responsibilities of the latter as still belong to it. Already Germany has given an inkling of her attitude to the League, when she objected to the question of demilitarisation being arbitrated by the League, in case of continued disagreement between France and herself. But in any situation, it ought to be one of the functions of an international body to see that those Saarlanders, who voted for the *status quo*, should not suffer at the hands of those who have won at the polls. That support of the *status quo* is a perversity, more heinous in the present position of Germany, there can be no doubt. But it is the essence of freedom that men should be free to hold perverse views ; and it is for the League and the Powers acting through the League to ensure fair treatment for those who vainly opposed the return of the Saar to the Reich.

* * *

Apart from these problems of a diplomatic kind, Germany is in the unfortunate position of having suffered a sudden amputation of a limb and having the same limb grafted on to her after a period of fifteen years. She will have a great deal to do before the Saar again becomes organically a part of herself. Economically, she has suffered all these years from the loss of the mines in Saarland ; and this has driven her to a number of devices to make up the deficiency. The currency, which has so far been in circulation in the Saar, has to be replaced by reichmarks and the necessary technical readjustments effected. But the immediate need is to provide credits for industry in Saarland. For it is idle to expect that France will continue to provide credits for what will from now be part of the territory of her historic enemy. It is reported that France has already withdrawn her credits and the German Government and the Reichsbank have stepped into the breach. There is also the question of buying up the mines according to the valuation by three impartial experts. It is not till all these details are completed that one can take leave of one of the most unhappy memories of the war.

ROAD AND RAIL

Sir Frank Noyce's address to the newly-formed Transport Advisory Committee which held its first meeting in the Prince's Chamber at New Delhi covered the salient issues of India's transport problem which *Indian Finance* dealt with in its issue of November 3. The Jayakar Committee first and then Messrs. Mitchell and Kirkness submitted valuable reports ; and a conference in November last considered the subject. Sir Frank Noyce, whom the Press report describes as Member for Transport, did no more than elucidate the issues which are involved from the fact that, while railways are and will remain a central subject, roads are and will remain a Provincial subject. Rs. 800 crores of public money invested in railways representing about two-thirds of the total debt of the Government of India are involved and as railways have been losing heavily recently, the seriousness of the problem is obvious. Moreover the whole transport system of the country on which its economic development largely rests has to be reorganised *vis-a-vis* rail-road competition.

* * *

Sir Frank Noyce devoted a large part of his address to explaining the mechanism of the railway rate structure which was criticised at the last annual session of the Associated Chambers of Commerce. If, said Sir Frank, high grade and low grade rates between them fail to give a reasonable return on the capital invested on railways, the only remedy is to let the

railways run at a loss or to raise the low grade rates —a dictum which the experience of businessmen will discard. As the prime transport service of the country, railways have unlimited scope and their present economic plight is attributable to the sense of security born of what was till recently a monopoly. At the first inroad of bus competition railways sought legislative protection which Sir Frank Noyce voiced. "I feel strongly", he said, "that it would be a profligate administration if we ourselves, *i.e.* the Government of India and the Provincial Governments, should spend or allow private agencies to spend large sums of money in developing motor transport in such a way that it will increase the losses of the railways and still leave large tracts of the country with no proper means of Communication."

* * *

The incentive of competition has urged railways to more efficiency and economy and no one will say that the limits of both have ben reached. Uneconomic competition as between railways and buses is not the solution, but a co-ordination which would give the best service to the public. Vast tracts of territory are innocent of any sort of efficient transport. These roadless tracts, once roads are provided, would be served by bus service as feeders to railways. Principally the problem is provincial because of the local Government's responsibility for road improvement and development. In Bengal, such roads as there are which link up bus service with rail heads, are impossible during the monsoon. That is an actual loss to railways which a road construction scheme can only eliminate. Then, the absence of bridges on good roads discounts their motor transport utility. The Petrol Tax could be earmarked as has been suggested, for road construction in Bengal. The approach to the problem, whose complexity no one disputes, is, in the words of Sir Frank Noyce, by "an amicable discussion, recognition by each party of the interests and difficulties of every other party and a continuous process of discovery, the widest possible area of mutual interest and accepted common action." The party whose interest is paramount is the public.

* * *

A re-orientation of railway administration, without trespassing on the legitimate scope of road transport, is indicated. In the United States the remedy has been found in the regional grouping of railway systems. A scheme similar to the American secheme was outlined by the Agent of the Bengal-Nagpur Railway at the annual conference of railway officers in 1932. It was suggested that railways in India should be divided into three main groups—Northern, Central and Southern, on a similarity of local conditions. The Group Committees would deal with all matters concerning their group, with the active collaboration of the commercial community. The unitary control of the Railway Board, remote from local environments, has outlived its utility and if there is to be co-ordination between road and rail transport, it has to be devised and effected by authorities on the spot. The taking over some years ago by the East Indian system of the Oudh and Rohilkhand Railway was a step in this direction, though that example has not been followed. As matters are, unintelligent competition between rival railway systems is a little less objectionable than the unrestrained and unregulated competition of bus service. In a country of the size of India, with its innumerable local interests, there is ample room for both road and rail transport and no purpose is served by perpetuating the disabilities under which both suffer at present. Happily, there are indications in recent official utterances that a departure from existing railway administrative ways is coming. It is difficult to shed old complexes, as it is difficult to develop new ones. But the conflict between rail and road is in the main false as the one is complementary to the other.

INDIAN IMMIGRANTS IN CEYLON

The lot of the Indian immigrant even in countries within the Empire is hard. In Ceylon the question of Indian immigration has also developed into an acute stage. There has not been happily a cloud of complicated issues in Ceylon and the question has been approached in a spirit of impartial investigation. The people of Ceylon have come to regard the Indian immigrant as an intruder, whose presence operates against the economic well being of the nationals. The decision of the Government of Ceylon to appoint a commission to enquire into the question is therefore commendable. The terms of reference to the commission include, according to a contemporary, the following:—

(*a*) The extent, as far as statistics and other proofs are available, of the displacement of Ceylonese in various trades and occupations by Indian immigrants.
(*b*) The trades and occupations in which this displacement has been most pronounced
(*c*) A survey of the rate of Indian immigration since the war.
(*d*) An estimate of the number of such Indian immigrants who have permanently settled in Ceylon.
(*e*) Proposals for preventing the displacement of Ceylonese in trades and occupations which have normally been served by Ceylonese ; and
(*f*) Any other measures for protecting the interests of the Ceylonese wage earning classes against the competition of Indian immigrants.

The safeguarding of the economic interests of nationals is a principle which India has advocated in her own case and its aptness in the case of Ceylon will not be questioned. All that India is concerned with is to see that Indians who, having gone to Ceylon on the invitation of Ceylonese, have settled down there and have contributed to Ceylon's economic development are not treated as mere aliens. These considerations will, doubtless, weigh with the commission in framing their recommendations and, if it is necessary or desirable, the Government of India may invite the attention of the Government of Ceylon to them. The position of Indian immigrants in the economic structure of Ceylon is well-established and how far a dislocation, even on a time scale, would be economically sound from the point of view of Ceylon is debatable. Obviously, such dislocation would be the greatest of hardships to all Indian immigrants and ruin to many. The responsibility of the Government of Ceylon for the protection of Indian immigrants, consistently with their responsibility for nationals, is clear.

(*Continued from page 147.*)

ably, be even a reversal of such policy with its obvious consequences to giltedge. The whole point has only to be stated to be recognised as palpably ludicrous. In the first place, there is no ground for the belief that a stabilisation agreement is in sight. We have in other sections of this issue considered in detail the prospects of stabilisation of the principal international exchanges and we have attempted to indicate the difficulties that lie in the path of the principal nations. A number of momentous questions will have to be solved by each country, before it can encounter others in open conference or secret negotiations on the question of the link between its own national currency and the currencies of other countries. It may also be asked whether the prospects of a stabilisation agreement will not be better realised and appraised by the London market than by the markets in India. In any case, to apprehend a stabilisation agreement and as a consequence thereof, a reversal of cheap money policy, of which, in fact, we have so little in India, are only indications of the present mood which must pass as soon as there is a break in money rates.

The increase in the Government's tap rate for purchases of sterling from 1s. 6 3/32d. to 1s. 6 1/8d. came somewhat as a surprise to the market. Though it was intended by Government mainly to protect their attenuated reserves, it had the effect of stiffening up rates and quickening activity.

Banks were sellers at 1s. 6 3/32d. within a month and 1s. 6 1/16d. for February-March, 1s. 6 1/32d. April-August. Three months bills advanced to 1s. 6 3/16d. January-February, 1s. 6 5/32d. March-April, 1s. 6 1/8d. May-October.

In the sterling tenders this week applications were received for £48,300,000 at 1s. 6 3/32d. which were allotted approximately 2 per cent. The same amount will be offered on Wednesday.

FOURTH REPORT OF THE DIRECTORS TO THE SHAREHOLDERS.

1. The Directors have the pleasure to present to the Shareholders a statement of the Assets and liabilities and of the Profit and Loss Account of the Bank for the year ending 31st December, 1934.

2. Figures in the Statement:—

	Rs.	A.	P.
The Net Profit for the year amounted to	75,722	15	9
Brought forward from last year	929	12	0
TOTAL	76,652	11	9
An *ad interim* dividend @ 6% per annum (free of income-tax) paid for the half-year ending 30th June, 1934, which absorbed	10,754	3	11
Preliminary expenses written off	2,451	3	0

The Director now propose

	Rs.	A.	P.
(*a*) To provide for the Managing Director's honorarium under Articles	9,465	6	0
(*b*) To provide for income-tax and super-tax	12,000	0	0
(*c*) To place to Reserves-General Rs. 17,000 Contingent ,, 10,000	27,000	0	0
(*d*) To pay a final dividend @ 7½% per annum (free of income-tax) for this half-year ...	14,090	14	10
(*e*) To carry forward	891	0	0
TOTAL	76,652	11	9

3. The proportion of our liquid assets and fully secured advances to the total deposits works out to about 3%, while that of liquid assets to deposits is 62.5% Further nearly one half of the total advances are fully secured, and necessary steps are being taken to increase this percentage.

4. Although our profits are reduced by investments in short-dated G. P. Notes and secured advances, the Directors propose to encourage only such investments, having regard to the security thereof.

5. In view of the increase of our business we issued 1,250 shares to the existing shareholders at a premium of Rs. 3. Almost all the shares have since been subscribed for. It is now proposed to further increase our authorised capital and notices for an Extraordinary General Meeting are being issued in that connection.

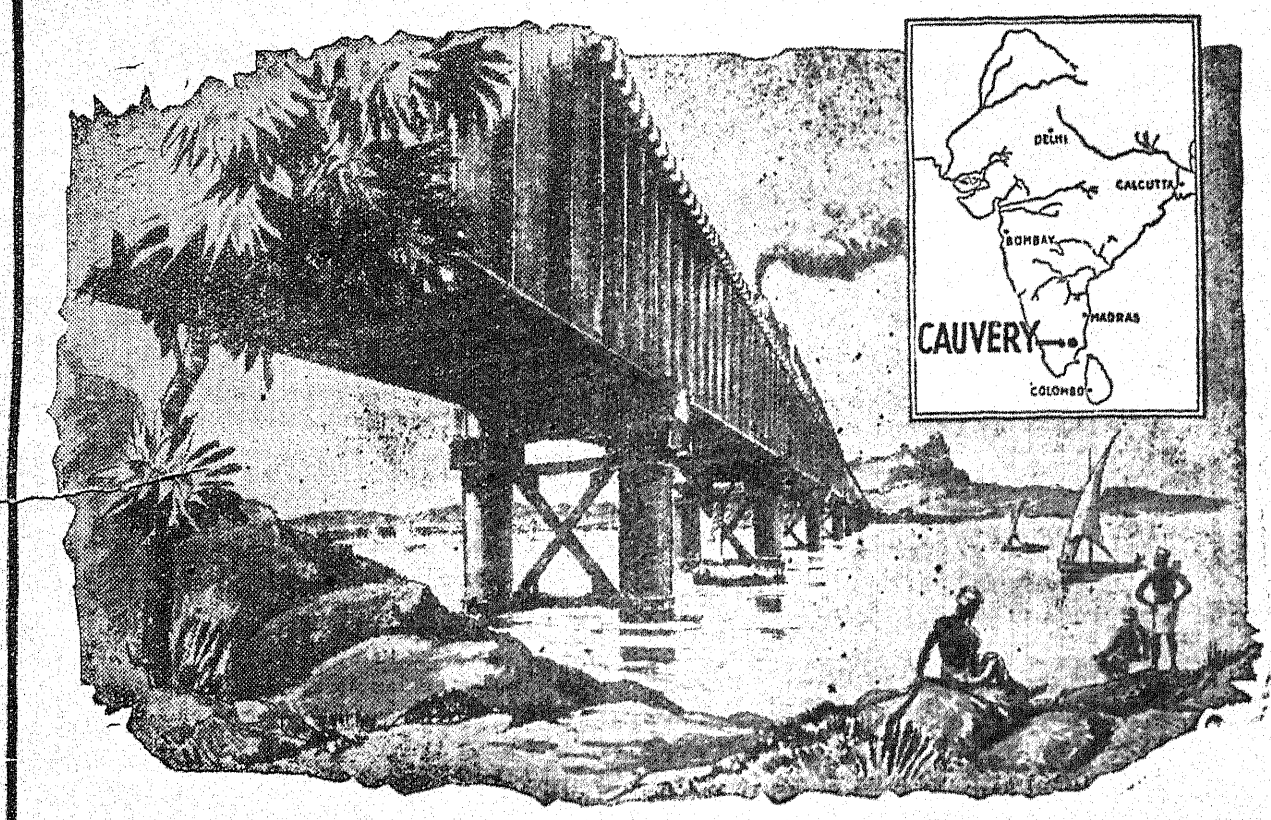
AUDITOR.



SPEED

The Cauvery River at Trichinopoly is nearly $1\frac{1}{2}$ times as wide as the Hooghly at Howrah Bridge.

Braithwaites bridged the river and opened the line to traffic in six months.

This feat was made possible by the Braithwaite organisation backed by their patented system by which they finished the foundations in five weeks. Seven other similar bridges having an aggregate length of two miles were completed by the same methods in 13 months of continuous work.

THE WHIRLIGIG OF POLITICS

A FANTASY

By G. L. M.

Although the political outlook was already black since the publication of the White Paper, our times are now out-of-joint owing to the Joint Committee's Report. And the tables have been turned in Indian politics despite (or because of) the Round Table Conferences. The Liberals are completely disillusioned in regard to the declarations of Cabinets, pledges of Viceroys, promises of Prime Ministers and statements of Secretaries of State. They are convinced that their constitutional methods including perpetual and prolonged conferences, respectful and repeated requests, minutes of dissent and efforts to consent followed by notes, memoranda and reports have led the country nowhere. Even their skill as negotiators and bargainers has proved futile and their sweet reasonableness, sterile.

On the other hand, the Congress leaders are disappointed by the results—or absence of results—of their struggle. They have had to suspend N.C.O. and C.D. and to take to C.P. (*i.e.* Wardha and Constructive Programme). They have returned to the Assembly which they had boycotted and have to make it clear that their rejection of the J.P.C. constitution does not necessarily involve a refusal to enter the new legislatures. Reports state that some of them are prepared even to dilute the "substance of independence" into the shadow of Dominion Status which has now vanished. If these tendencies persist and are carried further, what would happen? Just imagine:—

Allahabad, 1st November, 1935.

Mr. C. Y. Chintamani addressing a crowded meeting of the U.P. Youth League and Students' Federation last evening asked the youth of India not to be satisfied until they had won complete and full autonomy whatever the sacrifice and suffering involved in the struggle. He said that no nation had ever obtained its freedom as a gift from another through an Act of Parliament and added ironically that it was only people with horse-sense who could look a gift horse in the mouth. He said that nations by themselves are made and observed that revolutions, however pacific, were needed to change the psychology of the people without which mere constitutional modifications were of no avail. The meeting dispersed amidst scenes of enthusiasm and cries of "Inqualab Zindabad", "Chintamani Zindabad".

Bombay, 2nd November, 1935.

Great enthusiasm prevailed at the Liberal Rally which was inaugurated at the Cowasjee Jehangir Hall tonight. A big tricolour flag was in evidence on the platform and mottoes such as "No nation is fit to rule another", "Freedom is a Right and not a Gift", etc., were hung all over the hall. Loud cheers broke out when Sir Chimanlal Setalvad, the President, appeared in spotless white khaddar and when Sir Cowasjee Jehangir entered soon after with a white cap, the audience could hardly restrain itself.

Sir Chimanlal created a sensation at the very start by announcing that as a protest against the reactionary constitution which the National Government was, for all practical purposes, imposing or he might go further and was tempted to say nearly forcing on this unfortunate country, he had decided to return his Knighthood to the Government. (Thunderous applause and cries of "Chimanlal-kaka-ki-jai"). He said the Liberals had rallied but in a very different and almost opposite sense to that in which the late lamented Lord Morley desired to rally them: they had rallied to the nation, the people and the masses, not for Councillorships, Counsellorships, Ministerships. Sir Chimanlal also announced that the Liberal Federation had decided to carry on, as a form of constitutional protest, a widespread and intensive boycott of British goods. He quoted Surendranath Bannerjee who had declared that *swadeshi and boycott are two sides of the same* shield and could not be separated. He recalled that Gokhale had held that economic boycott and withholding of taxes were perfectly legitimate and constitutional weapons. Ex-Sir Chimanlal urged that legislative measures should be introduced in the new legislatures to achieve this object and he was not afraid if this violated the provision against discriminatory duties and treatment of British imports. He would have Minister after Minister resign on this issue when the Governor or the Governor-General (as the case may be) prevented such legislation and create a series of constitutional deadlocks. If the constitution was thereby made unworkable and suspended, nothing better could be desired. We would prefer to expose this sham constitution and prefer to be ruled by naked autocracy rather than by the false and expensive trappings of Councils and Ministerships.

It was suggested by Sir Cowasjee Jehangir that the autocracy would not be naked but clad in Lancashire cloth (Loud laughter) through the aid of additional safeguards ensuring freedom of British imports despite the Mody-Lees Pact whose greatest achievement was supposed to be the prevention of such restriction on India's fiscal autonomy.

Kumbakonam, 3rd November, 1935.

The Right Hon'ble Mr. Srinivasa Sastri in speaking at a huge mass meeting to protest against the Constitution Bill, said that he had felt rather strongly that the Right course in India to-day was to go more and more to the Left. He said those who kept to the Right—even to the right side of Government—were in the wrong: it's only those who are going Left who are right. He reminded the vast gathering of the wise and almost prophetic words of Gokhale that no limits could be set to the aspiration of a nation and asked why be frightened of a phrase—independence? "What's in a name?" as

CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 8 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

Eavesdropper wires from Bombay:

On my return to India I have a kind of Rip Van Winkle feeling. While I have always sought, and often secured, full publicity for my views, or for even my fads, I have strenuously endeavoured to keep back my name from public glare. And I find that during my fourteen weeks' absence, my modesty was rudely and frequently assailed. I understand that the Indian Press found occasion to make early frequent references to me, some complimentary and some not. Above all, my name has been centre of various rumours, surmises and, let me add, insinuations. "Did you enjoy yourself during your foreign tour?", ask my friends on seeing me back home.

"Thanks, immensely."
"Has this voyage been of profit to you?"
"Yes, this has been a great education to me."
"Has your mission been successful?"

I prick my ears, rub my eyes and wonder what all this talk of my "mission" means.

What took Eavesdropper to London? Was he canvassing support for securing the Deputy-Governorship of the Reserve Bank? If this was too high a prize to covet, was he endeavouring to become a member of the Central Board? Or was he put up, for instance, by the National Insurance Company to fix up some kind of business deal, like letting out a portion, of its buildings to the Reserve Bank?

These kind rumourmongers were not prepared to believe that it was time for a financial journalist who writes on London and its markets, to visit the places he writes on and understand, by personal contact, the topics he discusses week after week, and that this was a sufficiently important mission, especially as his journal is now of seven years' standing and he himself on the wrong side of forty. The idea of educative value in a stay in foreign countries does not seem to have appealed to insinuators, who were keen on discovering some motive of personal profit. Let me be frank with my readers and discuss the inuendoes without the personal grievance that they should have been connected with one who has never asked throughout his career for a single favour from those in authority and who has scrupulously planned his policy and shaped his action in a way that there should never be occasion for grinding one's own axe.

As for Deputy Governorship, I stressed my views long ago so vehemently and, I think, so melodramatically, that Shankar of *Hindusthan Times* found apt matter for forcible cartoon. Neither is this allegation compatible with our strong advocacy of the claims of competent students of public finance like Sir Shanmukham Chetty and Mr. A. D. Shroff. How could I have urged, again and again the suitability of these men? Even if I did hanker for emoluments so attractive, was it at all necessary for me to undertake a voyage across the seas to further my cause? Sir James Grigg, who had the largest say in this matter, was in India ; and I could certainly have easy access to him. Apart from my other disqualifications—and no one is conscious of them more than myself—the choice as between service to *Indian Finance* and service on the Reserve Bank left me the same option as an affectionate parent has for his child. The same reasoning applies to the Directorate of Bank. As it is, I get into trouble, often enough, by supplying information over which some friend or other is offended or embarrassed. I cannot write on the New Loan, because I have friends in the Controller of the Currency's office. I cannot write on the Budget, because I have friends in the Finance Department. Many another subject is taboo, because I have friends in the Imperial Bank or other important institutions. If I were worried all the time about susceptibilities of friends, there will be very little left for me to discuss. If, to these, were added a place on the Reserve Bank directorate, I might as well close down *Indian Finance*, as any special information divulged on important topics might make me liable to charge of breach of faith.

As I see my place in public life, I have to choose between *Indian Finance* and a sparse living on the one hand, and honour-giving jobs and affluence on the other. For seven years, I have been content with happiness, which a father who can be proud of his offspring feels. I hope, and am sure, that there is nothing in it that can make up, or be substitute, for this happiness. As for National Insurance Building why should I undertake broking jobs when, if I were so minded, I could make considerable fortune by utilising *Indian Finance* tips in giltedge or other markets?

To-day's gossip has to be brief, partly because I am writing this late on Friday's afternoon, but mostly because it were painful to dwell on the topic I have chosen for myself to-day. I shall, therefore, close this with renewing assurance that *Indian Finance* is my

mission, whether I am at home or abroad and that, whether it offends friends or irritates foes, we have asked for charter as large as the wind and for liberty to blow on whom we please. With this as my mission and with this motto for my policy, I am confident that my readers will continue to show me indulgence as heretofore. With the New Year and with commencement of our eighth year, let me wish *Indian Finance* and its affectionate readers increasing mutual appreciation and mutual ties of esteem.

"EAVESDROPPER"

(Continued from page 169)

Shakespeare, the national poet of England, said in another connection. Our rulers who know what is good for us have abandoned an embarrassing phrase Dominion Status, hastily promised and leisurely repudiated, so why cling to it ourselves? Dominion Status as defined by the Statute of Westminster was almost indistinguishable from independence or the substance of it which was the Congress ideal. Concluding Mr. Sastri said, "Let not this hair-splitting over the goal paralyse our national endeavour, hamper concerted agitation, frustrate national unification, delay national liberation." (Loud and prolonged cheers).

The President, Sir Sivaswamy Aiyer, congratulating Mr. Sastri for his bold lead characterised him as the "Left Hon'ble Mr. Sastri."

And the Congress leaders?

Ahmedabad, 4th November, 1935.

Sardar Vallabhai Patel in a statement to Congress workers in Gujerat asks them not to be impatient or reckless in their programme and work. There are no short-cuts to *swaraj*, he continues, and the way of national unity and freedom is a long and arduous one. You cannot expect to win swaraj in twelve months or even twelve years because national movements do not depend on scheduled time-tables. The Congress Working Committee are no more slaves of dates than Lord Birkenhead. The present was a time of preparation and intensive work in the villages while the leaders toured about the whole country and despite occasional ailments inspired the workers or went to the legislatures to prevent the Moderates from going there. They would deserve before they desire and if they desired *Purna* or even *Apurna swaraj*, they should, by prolonged searchings of their own hearts and by all-round constructive efforts, make themselves worthy of such responsibility.

Bombay, 5th November, 1935.

Mr. Bhulabhai Desai at a meeting in Marwari Vidyalaya where there was a small but select and representative gathering said that they had had enough of talk and what they wanted was solid work of a constructive nature, especially in the villages leaving the destructive work to the "Parliamentary" Board which is so-called despite the fact that Congressmen considered the legislatures to be a mockery of Parliament. He stated that it could not be denied that the failure of the nationalist movement and progressive forces was due in no small measure to our own weaknesses and dissensions and while others may be willing to accentuate and take advantage of these differences, they were fundamentally due to their own inability to settle them. How could they expect freedom if they all mistrusted and distrusted one another?

Madras, 5th November, 1935.

Mr. Satyamurti, M.L.A., in a speech at Gokhale Hall to-day said that what the Congress needed was a positive policy. It was of no avail to say that we had no interest in the new constitution or would ignore its working. The constitution, however retrograde or reactionary, would function and the legislatures would enact laws and impose taxes which the people would have to obey and pay. The Congress should not repeat the fatal mistake of Lahore and boycott the new legislatures. They should work them for what they are worth, although they are not worth much and capture and utilise all positions of vantage as well as disadvantage. He did not believe that mere heroics, rhetoric and pyrotechnic would bring *swaraj*. They had to fight on all the fronts and use whatever opportunities they could seize for furthering the constitutional and economic progress of the country. It was possible that the advance might be slow but so was all sure progress. Revolutions only produced reactions and unsuccessful revolutionary efforts hopelessly demoralised the people. It was risky to force the pace; and disintegration was the only consequence of the failure of a hasty militant programme. They should, therefore, set themselves down to quiet and unostentatious constructive work and endeavour to further it through the legislatures and with the co-operation of the existing governmental machinery. After all, the Government's money was their own and its personnel was a public service: so why not utilise them for advancing national ideals and schemes?

The "dual" policy, in short, has had dual results. While the Moderates are becoming extremists owing to the reforms, Congress leaders are becoming moderates owing to repression.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, January 15.

Before I let your reader have a little peep into the Conference on Indo-Burmese Trade and on the other one on the rate-war in shipping, I would like to refer again to the Transport Advisory Council whose conclusions were announced after I had sent you my notes last week. The Railway Board is jubilant about the findings. It means they have triumphed all along the line!

* * *

The public may not remember that about five years ago a Chief Commissioner of Railways enunciated the very principles which have now been adopted by the Advisory Council. Then the idea was poopoohed. The Railways were condemned as standing in the way of progress and depriving India of the advantage of modern developments.

* * *

One of the critics, at the time, went to the length of suggesting that the Ekka-wallahs did not raise a protest against the railway when it swept them off the board and took away all their traffic. It was said at the time that nature must be harnessed and it is all a question of survival of the fittest. The Railway was the fittest. Roads fell from favour.

* * *

Now, there has been a turn of the wheel and road challenges the supremacy of the railway to such an extent that practically all highly paying traffic is passing out of the hands of the railways. But whereas the Ekka-wallahs were private interests and were ruled out at a stroke of the pen, the railways are a public interest and have asked for special considetation. For 6 years their voice was a cry in the wilderness. Conference after Conference talked of road development programme; and all that the Railway autehorities could do was to assume legal powers to run their own motor service. But that bluff did not succeed.

* * *

The Railway Board waited for its chance and got it when the Transport Advisory Council was constituted. In this body, officialdom reigned supreme and this was the time to strike. The Chief Commissioner for Railways has come out with flying colours. All the demands which the railways were making have been conceded *in toto*. If all that the Provincial Ministers have agreed to were really put into effect, it would revolutionise the entire road transport system. Not one in a hundred of private lorry owners fulfils the terms laid down, or can fulfil them, and yet maintain the present rates for traffic.

* * *

This may mean that the lorry owner and driver, (sometimes they are one and the same), will have to grease some one's palm to get on. Or they will have to adopt some clever device to get over the conditions proposed to be imposed. And the lorry owners are a resourceful and "patriotic" lot. I was once a witness to the method adopted by them to get over the official inspection. The Inspector reaches a particular station and is to do the line up to a certain point. Off goes a lorry—empty and at *full* speed,—warning the next two stations and then the thread is taken up and all along the line a warning is thus given and the inspector finds himself out-witted.

I have mentioned this to indicate that, though conclusions of far-reaching character have been reached, it does not necessarily imply that the ideal will be achieved. But how the railway people won their case was that, so far as their principles were concerned, they were unassailable in the abstract and none in the Council contested them. So they were adopted one by one.

* * *

The Shipping Conference was successful not because the parties concerned agreed among themselves. They were ready in their minds as to the extent to which they would go, but they would not say so, and ultimately left the matter to be arbitrated by Sir Joseph Bhore. The Commerce Member gave his decision; and it was accepted by all the parties concerned. Unfortunately, Sir Joseph felt shy at going further and tackling the question of Bombay-Karachi and the Persian Gulf problem. It was within the terms of reference; but he did not take these up and left them to be settled between the interests concerned, but the smaller companies were able to ensure the continuance of the present share they have of the Bombay-Karachi line.

* * *

The Government of India may also be complimented for the success in ensuring that the smaller interests, not only retain their existing foothold on the Malabar coast but will be getting a little larger scope, which gives them practically a monopoly of the trade on that coast. As against that, the bigger interests are assured of practical monopoly on the Bombay-Karachi line. Perhaps the Government of India, having surrendered on the point of commercial discrimination, could not very well force any issue beyond what the parties were prepared to concede. All told, therefore, the Shipping Conference has done as well as it could be made to.

* * *

The Indo-Burmese Trade talks proved more fruitful than was expected when the consultations were planned. Sir Chunilal Mehta was the chief spokesman and Mr. Birla and Mr. Kasturbhai were most helpful, as they did all they could to come to an honourable understanding. Mr. Walchand spoke out the point of view of Indians in Burma. The Government of India did not place their cards on the table but from the attitude they took up in the course of the discussion it was quite apparent on what lines they were thinking.

* * *

The Secretary of State's plan of getting a Trade Agreement, immediately, has thus succeeded; and though the Indian spokesmen made sure that all their point of view was fully appreciated, there is no denying the fact that, from the point of view of political reactions, it might have been advisable to take a more extreme attitude to make the British interests in Burma feel that, though they have secured separation of Burma from India they have, economically and fiscally, played into the hands of India.

* * *

And there was no more tragic demonstration of the absence of the real Burmese interest in the discussion in that no Burman leader, either political or commercial, was present at the discussion. It all seemed a case of dividing proceeds from Burma between England and India. And as it was so, the Indian point of view naturally was that India must be assured of her share.

(From Our Correspondent)

Bombay, Jan. 17.

Rural indebtedness is the theme of many Conferences and more Reports. The latter has just had another addition in the Report of the Land Mortgage Committee appointed by the Government of Bombay in October, 1933. The Committee was charged to examine the question of land mortgage banking with a view to relieving agricultural indebtedness, the formation of a central and land mortgage bank under the Bombay Co-operative Societies Act to finance primary banks throughout the Presidency by issuing debentures, to inspect their working and to assist their operations is the suggestion of the Committee. Much of the Report traverses well-worn ground, such as phenomenal fall in prices, unprecedented range of depression, improvident agriculturals and burden of hereditary indebtedness. Against this sombre background the Committee throws a relieving patch or two—as for instance the accommodating mood of money-lenders, cheap money and easy terms on which money can be had on sound security. The inutility of short term resources at the command of co-operative credit societies is stressed in the Report, which recommends a Government Bank for long term credit. Joint Stock Banks have not proved suitable as their aim has been principally to get as much profit as possible for themselves. Experience shows that co-operative banks are less costly owing to honorary services, for which reason the Committee are of opinion that the agriculturist's interests will be safeguarded by co-operative central bank. The specific suggestions the committee makes are that the Bombay Government should guarantee the debentures issued by the Co-operative Central Land Mortgage Bank both as regards the principal and the interest up to a sum of Rs. 50 lakhs in the first instance at a rate of interest not exceeding 5 per cent. per annum. Debentures should be issued only to the extent of loans advanced and against definite securities. The liability to Government should be limited to the extent of actual issue. In return, the Government should nominate the trustee or trustees for the debentures and should make a grant to the extent of the actual deficit in its Budget limited to Rs. 10,000 a year.

The financial position of the Bombay Corporation was lucidly explained by Mr. M. H. Karanjwala, Chairman of the Standing Committee of the Corporation in introducing the Budget estimates for 1935-36. Not only was the speech lucid but it was also frank. He was refreshingly candid in stating that though he was presenting in form a separate Budget yet from the point of view of sound finance it was not what it seemed to be. His references to the need for proper revision of assessments, specially of owner occupied properties and to the unbusinesslike methods in the sales of Corporation lands were appropriate. He advised the Corporation to lay down a definite policy which would inspire confidence in intending buyers of land. The Municipal Commissioner's financial proposals have been considerably altered by the Standing Committee which has turned down the plea for the restoration of temporary cuts in the salary of the Corporation staff. The estimates of income have been increased by nearly 5½ lakhs, largely through the transfer back to revenue of the sale proceeds of surplus lands. This procedure is defended on the ground that some part of the land was originally acquired by purchases from revenue funds. Though it is not certain that the sum now taken to revenue does not represent any land purchased out of capital, cuts under various items of expenditure to the nett extent of Rs. 2,80,000 have been imposed. Of this some part represents withholding next year the provision for depreciation on plant and machinery. The proposals would not be justifiable but for the Corporation's parlous situation. The same excuse justifies the withholding for two years of contributions to the Road Surfaces Fund. A reduction in the debt charges will set free Rs. 6,70,000 in the current year and Rs. 7,91,000 in 1935-36. If these sums are available the Corporation would consider the Commissioner's proposals for crediting capital funds for 1935-36 with the receipts from sale proceeds of surplus land estimated at Rs. 5 lakhs. In initiating the debate Mr. Jamnadas Mehta twitted the Chairman for causing an unnecessary scare about the financial position of the Corporation. Though he approved of the Committee's attempts to ease the burden of the tax payer the taxable capacity of the people has been reached according to Mr. Mehta and in his opinion there are still ways and means by which tax could be remitted. On the whole, the Committee's handling of the resources of the Corporation has been more reasonable than revolutionary. Bombay along with most other parts of North India has been passing through a trying experience. The coldwave has had Bombay in its grip for 3 consecutive days. Its damage to crop has been considerable. The Nasik District for instance where the staple crop is wheat has suffered heavily. People in Poona preferred to stay in their beds rather than face the temperature out-door. It is, however, not true that this coldwave constitutes a record. In January, 1933 and 1934, the temperature dropped as low as 39 and 40 respectively. What makes the present coldwave distinct from the previous similar experinces is the loss to standing crop and the toll of life it has taken. Happily, the weather is warming up and Bombay is shedding its indoor complex.

A provisional agenda has been issued for the forthcoming Budget session of the Bombay Legislative Council which begins on February 14 and is expected to last about a month. Besides the budget, the agenda contains two Government Bills, 18 non-official Bills and 25 resolutions tabled by Non-official Members of general public importance. Both the Government Bills relate to amendments of the Local Boards Act. Among private Bills, Mr. Syed Munavar will move the resolutions to regulate the money-lending business to a select committee, while Mr. H. R. Desai has tabled a similar motion in respect of his Bill to amend the law of adoption which was circulated for opinion at the last session. The Bills down for first reading include amendments to the Bombay Municipal Act, the Karachi Municipal Act and the Agriculturists Relief Act, and the Bill to prohibit the employment of children and to limit the work of young persons in shop and to provide for their yearly clothings. Members have tabled resolutions recommending the Government to remit no less than 50 per cent. of the land revenue in 1935 to cultivators. To reduce the cost of administration so as to bring it to the level of pre-reform days by lowering the salaries of provincial and subordinate servants.

The Ahmedabad wage dispute is wending its weary way through discussions and conferences in which Mahatmaji's intercession has been sought. The Labour Union on one side and Mr. Chimanlal Parekh, President of the Ahmedabad Mill Owners Association with others on the other are trying to work out an agreed settlement. Both parties have interviewed the Mahatma at New Delhi. The outcome of these deliberations is not yet known, though the reduction of hours of work from 10 to 9 since 1st January has created an atmosphere in which a compromise may materialise. The Ahmedabad labour trouble is of long standing. And he would be an optimist who would suggest that even with the Mahatma's intervention it will now be among the things of the past.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the rade of individual countries.

Complete catalogue sent free on application.

SOUTH INDIA

HOUSING THE POOR

(FROM OUR CORRESPONDENT)

Madras, Jan. 15.

From all signs South India is in the throes of an agrarian unrest. From Tinnevelly and Travancore at one end to the Ceded Districts at the other, it is all the same story of failure of crops, famine and famished conditions, low prices and high taxation, meetings and conferences, resolutions and appeals to Government. Last week I referred to the growing demand for the revision of the land revenue system in South India. This movement is strong in the Tanjore district. Tanjore is easily the most affluent area in the South and is well able to formulate its demands in more general and comprehensive terms. But the others are still too much in the depth of the depression not to relate their demands to specific requirements. They are at the moment grappling with the consequences of the drought. It is not as yet generally known outside the South that the drought, to which reference was made in these columns, had more serious consequences on the crops than one would have expected from its partial disappearance. The facts in this regard are simple. It was at first a case of absolute lack of rain and the fear that the crops would not grow at all. Later the drought was not so severe as was feared, but much depended on the volume and the timing of the rains. The improvement was so striking that some people were inclined to snout before they were out of the wood. But now it is realised that though the drought was less in the sense that the rains appeared, the value of the rains to the crop was little or nothing. It thus happens that many districts are now suffering nearly as much as they would have if the drought had continued in its full intensity.

From the ceded districts there comes a tale of famine and severe distress amongst the masses. Mr. Koti Reddy, a member of the local council, has just issued an appeal for public support; and in this appeal, he makes reference to the delay in the inauguration of the Thungabhadra Irrigation Project which is calculated to improve the prospects of agriculture in that part of the country. It is, indeed, a pity that there should have been some developments of late to damp the enthusiasm of people and government for new irrigation projects. The Crop Planning Conference which met last year gave rather an equivocal verdict on this question. They were not ready to commit themselves to the opinion that there had been an overproduction of rice; but they would, at the same time, offer no encouragement to the Provincial Governments to go ahead with such schemes of agricultural expansion as they had on their hands. The Provincial Governments have naturally interpreted these findings as a note of caution in regard to the iirrigation projects, and in the Thungabhadra Irrigation Project diplomatic difficulties have also combined to delay the Government's preparation. Now that the famine in the ceded districts has brought out more clearly the need for an irrigation project to serve that area, it is to be hoped that the Government will desist from relating this object to the larger problems of the Government and decide on an early resumption of this project.

In the far South the drought has left a great deal of distress and want behind. It would be but a palpable exaggeration to say that Tinnevelly is suffering from a shortage of foodstuffs or that the inhabitants have need to issue an appeal for public support. But agriculturists of all classes and grades are undoubtedly in trouble. The *Kar* crop has been distinctly a failure, and the prospects of *pisanam* are, by no means, rosy. The agriculturists have little in their hands by way of the proceeds of their sales of the *Kar* crop. Usually, the demands of Government on account of Kist are met out of the *Kar* proceeds and when the *Kar* proceeds are a blank zero, the agriculturist should be at his wit's end to devise ways and means to meet the Government's demand. When it is considered that *Kist* payment is such a large proportion of the gross income on land, it will be easily understood that meetings of landholders are held at various centres and resolutions are passed demanding certain specific reliefs for agriculture. There have been during the last one week more than three, or four meetings which were influentially attended and which, judging from their proceedings, certainly mean business. The demands are for a remission of land revenue by about 33 1/3 per cent., the postponment of *Kist* collections from February to March and the prolongation of the period to June and various measures of relief suited to the exact damage to the crops. It has been decided to send a delegation to His Excellency the Governor to press upon the Government the need for granting such relief. The general sense of these meetings can be imagined from the fact that a motion expressing thankfulness to Government for such concessions as they have so far made, had to be drawn up by the mover in deference to the dissent from the audience.

Agricultural distress is clearly not confined to the British Indian districts. The Travancore and Pudukotta Durbars have felt obliged to take particular note of the needs of agriculturists and to enquire into the ways of meeting them. The Pudukotta State has, for sometime, been engaged in satisfying the grievances of the agriculturists; and now the Government have decided to institute relief works. And what is more, the *communique* announcing this decision holds out the promise of increasing the outlay on such public works, should the response from the people show the need for more. In Travancore the Government have felt obliged to admit that they have not so far done anything to relieve the agricultural indebtedness. A committee has been appointed recently to go into the whole question.

In a review of the Land Review problem it is also necessary to refer to the resettlement which the Government have ordered in South Kanara. It is strange that in this period, in which almost every district of the South is asking for reduction of land revenue, the Government are able to to find an area in which they could order a positive enhancement. In the case of South Kanara the enhancement of land revenue which the Government has ordered amounts to as much as 12½ per cent. in the case of wet and garden lands. The Government declare that the enhancement is moderate and that on the facts reported by the Special Settlement Officer, an increase of 18¾ per cent. would have been justified. Needless to say, the Government's decision has been opposed by the landed interests who contend that the rates of assessment are out of all proportion to the productivity of the soil, which is one of the poorest in India. The Government's reply is that the memorialists have nothing more to say in support of their contention except vague statements about the poverty and misery prevailing in the district, unsupported by reliable evidence. The Government also contend that without such an increase in the case of South Kanara, there would be an unequal distribution of land revenue between South Kanara and the other districts. Whatever the merits of this question may be, it is certain that all over the South there is something or other to sustain public interest in land revenue problems. Everywhere the landed interests are learning under the pressure of necessity to bring about joint action on their part in regard to

(*Continued on page 181*).

***OVERSEAS' NEWS:** By Air Mail*

U. S. A.

REALISTIC OPTIMISM

There is hardly any note of discord in the chorus of optimism with which the States have greeted the New Year. All America is persuaded that 1935 will find the country happier than it has ever been since the collapse of the boom in the New York Stock Exchange brought the fateful depression into being not only in America, but throughout the world. This optimism is even more significant than it would otherwise have been for its frank recognition of the problems with which the Administration are now faced and the obstacles that still exist in the path of recovery. Wall Street, which must be assumed to read the signs of the business world aright, opened its first session of the New Year with a heartening spurt in most prices. All sections were firm and active. And although the principal heads of business were hedging their optimistic forecast with qualifications of various kinds, the general spirit of buoyancy in the country is unmistakable. If this buoyancy betokens only the cheerfulness with which America will set about the tasks that still remain, and not the temptation to under-rate present difficulties, the States might yet prove to be the beacon light of a distressed world as, in one sense, they have been during the years 1933-34.

The week in America has from the standpoint of the dry as dust chronicler, been altogether eventless. And how could it be otherwise when we are still on the eve of that great event, the meeting of Congress, of which nothing more is known than that it is impatient of the pace of recovery and that it contains numerous groups of men who are resolved to turn their impatience into dynamic activity. So far as the business world is concerned, it does not regard the new Congress with happy feelings. It is still nervous that Congress might prove powerful enough to push President Roosevelt on the path from which he has during the last few months desisted. Though, from this point of view, there would appear to be the prospect of an element of discord in America's public life, at the present moment the meeting of Congress must be said to have strengthened the alliance which President Roosevelt has virtually succeeded in completing with business. After all, in politics, alliances are formed less by common likes than by common dislikes; and the prospect of a congress, which sees in inflation the curse to many of the ills of American business, has had the effect of persuading businessmen that their salvation lies in giving all the strength they can to the President himself. That is the great achievement of the last three, four months.

Having been thus forced to gather round in defence of President Roosevelt's New Deal, businessmen are everywhere trying to make a fresh appraisement of the results of the President's recovery campaign; and one might add that such an attempt has been made by American business for the first time with an unprejudiced mind. Formerly American business was wont to stress unduly on the loss of individual creative effort consequent on the assumption by the State of far more functions than, properly speaking, appertained to it. Businessmen harped on the disastrous consequences of increasing the costs of production through a higher level of wages, a reduction in the working hours and interfering with the changes in prices. They also expressed themselves against the institution of various forms of relief to the unemployed and even to those sections of business which had been adversely affected by the course of the depression during the last few years. It must be said that the nature, working and consequences of the New Deal are such that one can see just as one is inclined to. Businessmen, anxious to make out a case against the New Deal, would, indeed, find in the history of American economy during the last two years much that would apparently make an effective case against the continuance of the recovery campaign. The same might be said for the supporters of the Roosevelt revolution. It is not surprising, therefore, that the very same businessmen, who formerly cried down the recovery campaign are now beginning to see its special merits. It must be added—and this also is to the advantage of Mr. Roosevelt—that businessmen are not blind to the lighter shades of the picture and that they are fully aware of the price which America has paid for such progress as Mr. Roosevelt has been able to achieve.

At the threshhold of the New Year, the balance sheet of the New Deal, as drawn up by the industrialists and the financiers of America, is of great importance. The gains may be set down first. It is freely acknowledged that a large part of the population is at least as well off at the end of 1934 as a year before and immeasurably better off than at the end of 1932. The improvement in production, greater turnover of business, low stocks in most lines, the comparative certainty of the revival of consumptive demand and the ability of industry to cope with such demand on a strictly remunerative basis which contrasts so much with the laws of previous years—these are not slurred over as formerly they used to be. It is also recognised that the popularity of the New Deal can no longer be questioned. The popularity and, it may be added, the vitality of the New Deal were amply demonstrated by the results of the last elections in which the Democrats were returned to both Houses of Congress with record majorities.

And now to the other side of the shield. America's New Deal has fallen far short of the extravagant predictions originally made by it. The Government have distinctly failed to achieve a restoration of prices to the level of 1926. Business, though it has improved much as compared with the low points of the depression, is still far below normal. Unemployment continues to be a problem, in spite of the appreciable decrease effected therein. The ranks of labour have not been fully satisfied that the working of the New Deal will meet all their aspirations. The stock exchange is still smarting under the restrictions imposed upon it. The internal maladjustments of each industry, consequent on the imposition of hastily drafted codes, are still there.

And above all, there is the rise in the National Debt which is directly traceable to Mr. Roosevelt's experiment. The National Debt has, as a matter of fact, increased by 45 per cent. in a little more than two years. During the year 1934 it rose to over $28,000 million as compared with $19,500 million when Mr. Roosevelt came to office. And what is worse, in his message to Congress a year ago, Mr. Roosevelt complacently estimated that the debt would go up to $32,000 million. It is, indeed, very difficult to say whether or not America has had an adequate return for all this outlay. For there is no yardstick with which to measure the increase in human prosperity which has resulted from the measures adopted by the President. Even economically, such appraisement would be difficult; and it is immeasurably more so, when related to a qualitative factor like human well-being. But one thing, however, may be said in this connection. It is necessary to utter a warning against over-estimating the volume of the National Debt. It is over-estimating, not in the sense of putting the National Debt at a higher figure than it is, but in the sense of a relative appreciation of its significance as compared

Air Mail Week.

with the total national wealth or the capacity of the people to bear the burden. Even at the figure of $32,000 million predicted by Mr. Roosevelt, America's National Debt would mean in sterling £6,400 million. This compares with the £7,409 million of Britain's net National Debt on March 31 last. The difference in favour of America is too significant to be overlooked. And what is more, while the British debt falls on the shoulders of 45 million people, the burden of the American debt rests on the shoulders of 120 million people. It may, therefore, be said that, however, much Mr. Roosevelt may have increased the National Debt during these years, it is well within the capacity of the American nation to bear. This comparison of the American and the British National Debt is. indeed, useful in more than one way. It has already been pointed out that the American debt is relatively less useful. Secondly, America had at least as much justification for increasing the National Debt in 1933-34 as Britain had in 1914-18. For the crisis in American affairs in these years is not less serious than the crisis in Britain's fortunes at the time of the Great War ; and while in the case of Great Britain the additional debt was only a sterile waste and, if productive, only of evil, a large part of the National Debt of America in these years will leave behind lasting economic assets.

The only question, therefore, is how long this process of increased public expenditure will continue and whether it will be as easy to put a curb on expenditure as it has been for President Roosevelt to give free reins to it. At the moment, however, the signs are disquieting. The new Congress is known for its zeal for inflation ; and it might well be that the first manifestation of its inflationary yield will be a demand for more and more of public expenditure. Business, for its part, should have little to complain against it ; for big business is in almost all cases one of the first beneficiaries of the capital expenditure of the Governments ; and the ordinary public, too, will reap considerable advantages, though they may not compare very favourably with the gains which big business will be able to secure for itself. It may, therefore, be said, that, even if the present move continues, and the National Debt is increased, American economy would only benefit it ; and there would be time to check any undesirable effects on business through increased taxation. The instinct, which has impelled Americans to regard the New Year with optimism, is thus fundamentally sound.

FRANCE

NEW CREDIT POLICY

The circumstances leading to the judicial liquidation of the Citroen Company were discussed in these columns last week ; and it was then pointed out that the sudden close up of the concern was in part, if not entirely, due to the monetary policy that the French Government has been following all these months. Even on earlier occasions the comparative merits of deflation as against a mild dose of inflation have been discussed from the point of view of reviving trade and maintaining economic prosperity. The rapidity with which the Governments have been changing and the almost religious fervour with which the devaluation or abandonment of the gold standard has been ruled out as not even worthy of discussion, have only led to a setback in the national economy. When, therefore M. Flandin pleaded for a more liberal economic policy, some hope was expressed that with his accession to power there might be a change for the better. There are evidences, this week, to show that there has really been a change in policy, though it would perhaps be too bold to say that the Citroen affairs did anything to hasten the initiation of the new policy.

The Government has consistently aimed at pulling the country out of its crisis by cheapening money ; and the cardinal point in the programme has been the rise in the Rentes. The difficulty which the Government experienced in the past months in balancing the Budget resulted in constant appeals to the market for large loans, with the result that the Rentes have always been quoted at a very low figures. This also proved to be the chief obstacle to cheapening long term money. In the coming few months also, there may be need to raise fresh sums of loans in view of the seasonal fall in the revenue collection and large capital outlay required for National Defences. As an alternative to borrowing, the Government have proposed to issue about five milliards of Treasury Bills and discount them with the Bank of France.

Under the Stabilisation Law, the Bank granted the Government a permanent loan of 3,200 million francs ; until the depression began, the question of the Bank discounting Treasury Bills did not arise, since the Treasury was well equipped with funds. With the frequency of Budget deficits, however, and the growth of the floating debt, there has been a growing demand for rediscounting of Treasury Bills. Hitherto the Bank has adopted the attitude that only in exceptional circumstances such rediscounting facilities could be offered. The prospect of a fresh loan by the Government necessitates a closer co-operation with the Bank. It is argued that the Bank has utterly failed to perform its duty as a furnisher of credit both to the State and the general public in a time of crisis like the present. It is also recalled that less than a year ago, the Treasury was obliged to appeal to Dutch bankers for credit offering gold as guarantee while the Bank of France kept an enormous reserve and a ridiculously high cover for sight liabilities.

It is this utilisation of the resources of the Bank for widening credit that forms the chief feature of M. Flandin's new policy. But the Prime Minister was not without opposition in this new departure. The President of the Bank evidently did not like to survive from the traditional made of Bank policy. But appreciating as he has done, the need for a change, M. Flandin has thought fit, so it is reported, to change the Bank officials and to bring in one who will be more forward in helping the Ministry in its plans for combating the crisis. The announcement was made that M. Clement Moret had been succeeded by M. Jean Tannery as Governor of the Bank of France. M. Moret had held the post of the Governor for the past four years and his official tenure was remarkable for the zeal with which he stuck to the gold standard. It is rumoured that this change in office is the result of conflicting views regarding monetary policy between the Bank and the Government. M. Tannery, who is the new President, has to his credit a successful management of the *Caisse des Depots et Consignations,* the large portion of the enormous funds of which institution was devoted to the supporting of the Rentes market and discounting National Defence Bonds and Treasury Bills. The new appointment is expected to result in a closer co-operation with the Flandin-government in the attempt at cheapening long-term credit.

No change was announced in the Bank's loan or discount rates this week ; but it is the general expectation that the loan rate which is now 4½ per cent. as against a discount rate of 2½ per cent. will be reduced shortly. Loans against security amount to a little over 3,000 million francs and the Bank's policy hitherto has discouraged borrowing against government bonds. M. Flandin is making it known that the new credit policy is only one of the many features in the programme for the revival of business. Another item is the formation of industrial *ententes* with a view to reducing production to the level of consumption. A bill is being drafted empowering industrial organisations embracing from two-thirds to three-fourths of the pro-

U. S. A.

REALISTIC OPTIMISM

There is hardly any note of discord in the chorus of optimism with which the States have greeted the New Year. All America is persuaded that 1935 will find the country happier than it has ever been since the collapse of the boom in the New York Stock Exchange brought the fateful depression into being not only in America, but throughout the world. This optimism is even more significant than it would otherwise have been for its frank recognition of the problems with which the Administration are now faced and the obstacles that still exist in the path of recovery. Wall Street, which must be assumed to read the signs of the business world aright, opened its first session of the New Year with a heartening spurt in most prices. All sections were firm and active. And although the principal heads of business were hedging their optimistic forecast with qualifications of various kinds, the general spirit of buoyancy in the country is unmistakable. If this buoyancy betokens only the cheerfulness with which America will set about the tasks that still remain, and not the temptation to under-rate present difficulties, the States might yet prove to be the beacon light of a distressed world as, in one sense, they have been during the years 1933-34.

The week in America has from the standpoint of the dry as dust chronicler, been altogether eventless. And how could it be otherwise when we are still on the eve of that great event, the meeting of Congress, of which nothing more is known than that it is impatient of the pace of recovery and that it contains numerous groups of men who are resolved to turn their impatience into dynamic activity. So far as the business world is concerned, it does not regard the new Congress with happy feelings. It is still nervous that Congress might prove powerful enough to push President Roosevelt on the path from which he has during the last few months desisted. Though, from this point of view, there would appear to be the prospect of an element of discord in America's public life, at the present moment the meeting of Congress must be said to have strengthened the alliance which President Roosevelt has virtually succeeded in completing with business. After all, in politics, alliances are formed less by common likes than by common dislikes ; and the prospect of a congress, which sees in inflation the curse to many of the ills of American business, has had the effect of persuading businessmen that their salvation lies in giving all the strength they can to the President himself. That is the great achievement of the last three, four months.

Having been thus forced to gather round in defence of President Roosevelt's New Deal, businessmen are everywhere trying to make a fresh appraisement of the results of the President's recovery campaign ; and one might add that such an attempt has been made by American business for the first time with an unprejudiced mind. Formerly American business was wont to stress unduly on the loss of individual creative effort consequent on the assumption by the State of far more functions than, properly speaking, appertained to it. Businessmen harped on the disastrous consequences of increasing the costs of production through a higher level of wages, a reduction in the working hours and interfering with the changes in prices. They also expressed themselves against the institution of various forms of relief to the unemployed and even to those sections of business which had been adversely affected by the course of the depression during the last few years. It must be said that the nature, working and consequences of the New Deal are such that one can see just as one is inclined to. Businessmen, anxious to make out a case against the New Deal, would, indeed, find in the history of American economy during the last two years much that would apparently make an effective case against the continuance of the recovery campaign. The same might be said for the supporters of the Roosevelt revolution. It is not surprising, therefore, that the very same businessmen, who formerly cried down the recovery campaign are now beginning to see its special merits. It must be added—and this also is to the advantage of Mr. Roosevelt—that businessmen are not blind to the lighter shades of the picture and that they are fully aware of the price which America has paid for such progress as Mr. Roosevelt has been able to achieve.

At the threshhold of the New Year, the balance sheet of the New Deal, as drawn up by the industrialists and the financiers of America, is of great importance. The gains may be set down first. It is freely acknowledged that a large part of the population is at least as well off at the end of 1933 as a year before and immeasurably better off than at the end of 1932. FRANCE

NEW CREDIT POLICY

The circumstances leading to the judicial liquidation of the Citroen Company were discussed in these columns last week ; and it was then pointed out that the sudden close up of the concern was in part, if not entirely, due to the monetary policy that the French Government has been following all these months. Even on earlier occasions the comparative merits of deflation as against a mild dose of inflation have been discussed from the point of view of reviving trade and maintaining economic prosperity. The rapidity with which the Governments have been changing and the almost religious fervour with which the devaluation or abandonment of the gold standard has been ruled out as not even worthy of discussion, have only led to a setback in the national economy. When, therefore M. Flandin pleaded for a more liberal economic policy, some hope was expressed that with his accession to power there might be a change for the better. There are evidences, this week, to show that there has really been a change in policy, though it would perhaps be too bold to say that the Citroen affairs did anything to hasten the initiation of the new policy.

The Government has consistently aimed at pulling the country out of its crisis by cheapening money ; and the cardinal point in the programme has been the rise in the Rentes. The difficulty which the Government experienced in the past months in balancing the Budget resulted in constant appeals to the market for large loans, with the result that the Rentes have always been quoted at a very low figures. This also proved to be the chief obstacle to cheapening long term money. In the coming few months also, there may be need to raise fresh sums of loans in view of the seasonal fall in the revenue collection and large capital outlay required for National Defences. As an alternative to borrowing, the Government have proposed to issue about five milliards of Treasury Bills and discount them with the Bank of France.

Under the Stabilisation Law, the Bank granted the Government a permanent loan of 3,200 million francs ; until the depression began, the question of the Bank discounting Treasury Bills did not arise, since the Treasury was well equipped with funds. With the frequency of Budget deficits, however, and the growth of the floating debt, there has been a growing demand for rediscounting of Treasury Bills. Hitherto the Bank has adopted the attitude that only in exceptional circumstances such rediscounting facilities could be offered. The prospect of a fresh loan by the Government necessitates a closer co-operation with the Bank. It is argued that the Bank has utterly failed to perform its duty as a furnisher of credit both to the State and the general public in a time of crisis like the present. It is also recalled that less than a year ago, the Treasury was obliged to appeal to Dutch bankers for credit offering gold as guarantee while the Bank of France kept an enormous reserve and a ridiculously high cover for sight liabilities.

It is this utilisation of the resources of the Bank for widening credit that forms the chief feature of M. Flandin's new policy. But the Prime Minister was not without opposition in this new departure. The President of the Bank evidently did not like to survive from the traditional made of Bank policy. But appreciating as he has done, the need for a change, M. Flandin has thought fit, so it is reported, to change the Bank officials and to bring in one who will be more forward in helping the Ministry in its plans for combating the crisis. The announcement was made that M. Clement Moret had been succeeded by M. Jean Tannery as Governor of the Bank of France. M. Moret had held the post of the Governor for the past four years and his official tenure was remarkable for the zeal with which he stuck to the gold standard. It is rumoured that this change in office is the result of conflicting views regarding monetary policy between the Bank and the Government. M. Tannery, who is the new President, has to his credit a successful management of the *Caisse des Depots et Consignations,* the large portion of the enormous funds of which institution was devoted to the supporting of the Rentes market and discounting National Defence Bonds and Treasury Bills. The new appointment is expected to result in a closer co-operation with the Flandin-government in the attempt at cheapening long-term credit.

No change was announced in the Bank's loan or discount rates this week ; but it is the general expectation that the loan rate which is now 4½ per cent. as against a discount rate of 2½ per cent. will be reduced shortly. Loans against security amount to a little over 3,000 million francs and the Bank's policy hitherto has discouraged borrowing against government bonds. M. Flandin is making it known that the new credit policy is only one of the many features in the programme for the revival of business. Another item is the formation of industrial *ententes* with a view to reducing production to the level of consumption. A bill is being drafted empowering industrial organisations embracing from two-thirds to three-fourths of the pro-

Air Mail Week

ducers concerned, to enforce their agreements on recalcitrants. The formation of Industrial Courts is also foreshadowed ; more about this later.

The news of this new departure in the economic policy was received by the Bourse with a sharp advance in the Rentes amounting in many cases to over a franc. Shares also improved and the market displayed considerable activity. On the exchanges the franc gained on both sterling and the dollar. Foreign orders as well as orders from the general public at home were noted. Traders adopted the view that it is high time that the Government pursued an active, instead of a passive, monetary policy and believe that the upward movement in the Rentes will last for sometime, enough to attract the hoards throughout the country. The prospect of the Franco-Italian *rapproachement* and the initiation of the policy of credit expansion combined to produce an optimism, the like of which has not been seen for some years. It is taken for granted that the Government is determined to spare no effort to maintain the upward movement in the Government bonds ; and it is also expected that the early success of these efforts will be a return of the 4½ per cents to parity, which has not been touched for the past two years. M. Flandin is highly commended in commercial circles as the first Premier who has dared to attack a crisis directly instead of submitting thereto as an evil which is bound to work itself out.

Franco-Soviet Trade Agreement

Another item of note equally important in the French economic life is the signing of a trade protocol between the Soviet Union and France. M. Marchandeau, the French Minister of Trade, is now in Moscow carrying on negotiations with the Soviet authorities for trade alliance and the protocol that has now been issued contains the preliminary outlines of the basis on which the detailed negotiations will be carried on. According to the protocol, both the Governments are willing to draw up a trade agreement on the following lines:

1. France to grant a long-term credit at the normal rate of interest which will be utilised by the Soviet Government for the increased purchase of French commodities.
2. *France to accept a 60 per cent. export in*surance guarantee for French exports to the Soviet.

During the first nine months of 1934 French exports to the Soviet Union have risen from 34 million francs to 85 million francs compared with the figure for the corresponding period last year. Simultaneously French purchases of Soviet goods have also declined from 478 million francs to 354 million francs during the same period, so that the favourable balance of trade is appreciable. The Soviet government have also in terms of the existing trade agreement placed further orders with French firms to the extent of 250 million francs so that the relations with the Soviet Union have been very advantageous to France. France's readiness to grant a long-term credit to Russia and to insure against export risks are sure to facilitate the financing of Soviet orders. The preliminary understanding is, of course, for the insurance of the exports only up to 60 per cent. There is still 40 per cent. of the exports and, with the initiative given by the State, it is expected that there will not be much difficulty in arranging cover for the balance. The difficulties, if there be any, in connection with financing of trade should also disappear when the discountability of Soviet bills is secured with French Banks and with the Bank of France. There has, of course, been no difficulty with regard to payment of the French exports to Russia, but the extension of the credit facilities as contemplated in the new agreement will enable the French exporters, who are having large amounts of Soviet bills in their portfolios, to dispose them off much quicker. The French Press is jubilant over this economic rapproachment between the two Governments and points to the favourable experience of France in her trade relations with the U. S. S. R.

GERMANY

INDUSTRY IN SAARLAND

It is now certain that the Saar plebiscite will be substantially in favour of reunion with Germany, though a certain kind of futile kite-flying is going on *to preserve the status quo*. The settlement of the political problem will intensify the economic problem. Business in the Saar basin is in a critical stage, involving the well-being of thousands. Germany is the chief purchaser of manufactured goods, while sales to France have been steadily decreasing because of depression and deliberate discrimination. Payments for sales to Germany, vital to Saar business stability, are arranged through the Franco-German Clearing Agreement, which does not operate in favour of Saar interests, as Germany's balance of trade with the French Customs is adverse to her. More than 50 millions of francs due to Saarland for deliveries to Germany are frozen credits ; and unless the regulations of the clearing agreement are modified, there is no likelihood of compensation. Saarland industries have been repeatedly and definitely informed by France that amounts due to Saarland cannot be met except to the extent of funds available in the Clearing Agreement.

The shortage of credits caused by the complications of the clearing agreement is augmented by the withdrawal by France of customary commercial credits from the Saar basin, principally because France apprehends the return of the Saar basin to Germany as a result of the plebiscite and is prepared to withdraw all credits by January 13, the fateful polling day. French banks refuse to discount credits made out to, or by, Saarlanders ; and those operating in the Saar basin are withdrawing credits formerely given to Saarland business houses. A radical change of the customs system must take place to ease the present situation. The Saar basin was made a part of the French system of customs by the Treaty of Versailles. And if, as seems certain, the Saarland reverts to Germany on the declared will of the people, the problem of financing and developing Saar industries will at once come to the fore.

National Economy

A noticeable element in the programme of national economy is "the fight for production," which formed the subject of recent addresses of the Federal Leader of Farmers, Herr Walther Darre. He made out a strong case for creative work, rejecting business methods calculated solely on profits from trading and speculating. Business, he said, not only in Germany, but all over the world, was in a chaotic state because reorganisation is being attempted on unsound economic principles. In view of Germany's isolation and unfavourable divisen situation, its foremost requirement is to put in order the food problem. National Economy must, according to Herr Darre, be founded on the domestic soil and the people connected with it. It has its source in them. Capitalist world business is extensive: national socialist business must be intensive, using home forces of the soil.

These fundamental principles have led to a demand for increased production, the conditions for which have been created by the new market regulations with fixed prices and adjustment of imports to actual demand. The system of free markets for agricultural produce has been eliminated. For the farm this system means the end of speculative business.

Coal Cartel Prospects

With the formal ratification of the Anglo-Polish Argeement to eliminate undesirable competition and raise prices in foreign markets, speculation is directed

Air Mail Week

to the probability of Germany entering into a similar agreement. Germany is second to Britain as an exporter of coal, her exports varying between 23,000,000 and 18,000,000 tons during 1932-33, compared with British exports varying from 34,000,000 to 31,000,000 tons in the same years. While the Anglo-Polish coal agreement was under negotiation, Germany made a tentative proposal to Britain ; and there is every likelihood of the proposal being revived to cover Poland, with the probability of bringing in later France, Holland and Belgium, though the last three countries are, on balance, not importers. As between Germany and Britain, this consideration does not exist ; and it is confidently believed in responsible quarters that it will not be long before the first International Coal Cartel will be established.

Anglo-German Payments

The conclusion of a session of the Anglo-German Consultative Committee set up under Article 10 of the Payments Agreements did not register any final settlement of the two-special problems—namely, the deficiency that has arisen in the foreign exchange available to Germany for payments due to British exporters and, second, the liquidation of commercial debts incurred before March 1. The deficiency in foreign exchange is accounted for by the too liberal issue by Germany of foreign exchange certificates which has brought about an increase in imports from Britain without a corresponding increase in imports into Britain. This contingency is not very near: a real deficiency, is being caused by the liquidation of the Sondermark account, which, together with past debts, was to be liquidated by capitalising German balances said to be held in London. If these balances proved insufficient, recourse would be had to the 35 per cent. of the proceeds of German exports to Britain for payment of German imports from Britain. The liquidation of this amount has not proceeded satisfactorily ; and it has to be wound up by January 31. As to pre-March 1 commercial debts, it is found impossible to liquidate them through the Payments Agreement machinery, unless some means can be found of greatly increasing German exports to Britain.

German Bank Issue

On January 3, the Hamburg Mortgage Bank (Hypotheken Bank), one of the most active German mortage banks, announced an impending issue of Rm. 10,000,000 mortgage bonds—the first on the German market since the banking crisis in 1931. The bonds will bear 4½ per cent. interest ; and it is hoped to place them at a price of about 94 per cent. Just at present 6 per cent. Mortgage Bonds are quoted on the Berlin Stock Exchange at an average of 94 per cent. and 4 per cent. Municipal bonds at about 87 per cent. and the new Bonds will need manipulation by some form of a banking syndicate. The bonds will be sold only over the counter as it would be easier thereby to regulate the market. The new issue will be available after the Saar voting and its popular appeal will be ensured by the name "Liberty Loan." It is rumoured that the issue is preliminary to a big loan by the Reich in the not too distant future, by which consolidation of a part of the giant floating debt incurred for the financing of the work creation programme is contemplated.. During the past year no new issues have been made on the German market apart from some conversion offers for reichsmarks and dollar bonds, which, all told, come up to about Rm. 1,000,000,000.

More Foreign Trade

The Bremen Chamber of Commerce has put in a public plea for the expansion of Germany's foreign trade as a point has been reached in Germany's industrial and economic life when further creation of work without an increase in foreign trade is not possible. The immediate requirements for overseas trade is State assistance regarding the granting of capital without which the financing of exports is impracticable. Germany grants long term payments for her exports of finished articles, while she cannot get similar terms for imported raw materials. Capital assistance is also required to win new customers abroad and to recover lost ground on the world market. The German exporter is not in a position to organise business on these lines without capital.

(*Continued from page 177*).

conferences and passing of resolutions to be forwarded to Government.

To change over by way of relief to less controversial and comparatively more tractable problems, it is happy to contemplate that the Madras Corporation has made a good beginning in the abolition of slums and the provision of decent housing for the poor. On January 11 His Excellency Lord Erskine declared open the new block of buildings constructed by the Municipality in the Harbour Division, and which will hereafter be known as the "Erskine Colony." The need for this scheme is obvious. A recent report of the homeless in the City of Madras shows that about 10,000 persons had no roof to sleep under. The cause of this state of affairs is to be seen in the large-scale immigration into the city of a number of labourers and vagrants from the other parts of the Province. Between the ten years 1921-31 there was a phenomenal increase in the population of over 1,20,000, of whom 40,000 were accounted for in slum areas. As the excess of the birth rate over the death rate is rather small, the increase could only be attributed to the emigrants who pour into the city in search of a livelihood. For such a population of 120,000 the increase in the number of houses was only 9,737, which means an addition of only one house for every twelve emigrants. It is to house these houseless that the Corporation has started this new scheme. The Erskine colony is part of a three-fold scheme for the housing of the poor in this division. When completed, the entire scheme will provide 176 tenements at a cost of about Rs. 3 lakhs.

The block of buildings now opened consists of 55 tenements constructed at a cost of about Rs. 55,700. The site was assigned free by Government and to make the best use of the space available, the buildings have been storied. Each tenement consists of a front verandah, a living room, twelve feet by ten and a rear verandah for use as kitchen. Electric lighting, the necessary sanitary conveniences, and overhead water tanks served by electrically driven pumps, have also been provided. The buildings are constructed in reinforced concrete for frame works and roofiing with hollow blocks for walls chosen for cheapness of construction and maintenance. This type, it is stated, will 'withstand the destructive propensities of the average slum dweller.' A rent of Rs. 2 per tenement and Re. 1 for electric lighting will be charged.

As this laudable start in housing has been made possible by Government grants the Mayor of Madras, in his address on the occasion, appealed to His Excellency to make further grants in order that the Corporation could continue this useful work.

JUTE AND JUTE GOODS

JUTE

Calcutta, January 17.

Early in the week, there was a further rise in the raw jute market price for March futures touching Rs. 35-12. Later, however, prices began to decline and at the time of writing the quotations are no better than Rs. 33. The decline has been due partly to the weaker goods market and partly to heavy bull liquidation by long holders, who naturally were anxious to take profits after the announcement of the crop restriction plan by the Government of Bengal. The liquidation is not yet completely over and a further small drop may consequently take place. The fundamental position however is unchanged and the undertone of the market is steady. The real trend will however be noticeable when the conditions are more settled.

Early in the week business in ready firsts was done at Rs. 32-8 to Rs. 33. Later, however, the buyers have withdrawn and sellers are now quoting Rs. 31. Mills have practically remained out of the market, and there are sellers of Indian Jat XLR at Rs. 4-12 per md.

JUTE MANUFACTURES

Calcutta, January 17.

The hessian market ruled quiet, with very little business showing: 40 inches 10 oz. January was done at Rs. 12-2 basis and January-March 9 porters at Rs. 9-4.

Heavy goods were firm, sellers being reserved. "B" Twills were negotiated at Rs. 15-13, April-June: Liverpool twills at Rs. 28-12 are reported for the same delivery. Striped Heavy Cees January sold at Rs. 26-4.

The total reported sales for the week ending Saturday the 12th January, 1935.

COTTON AND COTTON GOODS

COTTON

Calcutta, January 17.

Fluctuations of price in Cotton ranged over a small scale, the undertone continuing steady. A certain amount of liquidation of long positions took place, though not enough to disturb the market.

The yarn section of the market has been dull and featureless, with prices unchanged.

Bombay reports state that the market there was strong mainly upon the option dealers who have been buying at below Rs. 240 for Broach April-May contract.

Actual arrivals of Oomra are disappointing and the difference between Broach April-May and Oomra December-January contracts narrowed down from Rs. 11½ to Rs. 8½ last week.

All-India mill consumption during November 1934 amounted to 228,000 bales compared with 229,000 bales during October 1934 and 193,000 bales in November 1933. Seasonal consumption from September to November 1934 amounted to about 671,000 bales compared with 563,000 bales during the same period last year.

World consumption of all kinds of cotton during October 1934 aggregated to 2,194,000 bales compared with 1,874,000 bales in September 1934 and 2,128,000 bals in October 1933.

World stock of all kinds of cotton on October 31, 1934, has been estimated at 32,773,000 bales compared with the October stock of 35,232,000 last year.

COTTON PIECEGOODS

Calcutta, January 17.

Grey dhoties, Indian mill-made, were more in demand than other styles, fetching slightly better prices. The local market showed no interest in Lancashire or Japanese goods. The dull tone since the Id festival has not been relieved and the market showed at the week-end no signs of activity.

Exports of cotton textiles from Japan since January to mid-December 1934, amounted to 2,031,307 bales valued at Yen 455,299,000 as compared with 1,720,127 bales valued at Yen 435,768,000 during the same time last year.

BULLION

GOLD

Calcutta, January 17.

Due to sudden drift in the London New York cross rate to 4.84 from 4.94, gold in London has gone up from £7-0-9 to £7-2-6 per ounce while the local market has likewise improved to Rs. 35/5. The decline in cross rate is due to the rumours in London Market about the stabilisation of the pound and return to gold standard though there is nothing to confirm this news officially. Apart from this factor the market has been featureless.

Total exports of gold from United Kingdom during the week ending January 4, 1935, amounted to £2,658,000 the whole amount going to the United States. Total imports into United Kingdom during the same week amounted to £3,930,000 worth came from South Africa and £491,000 worth from India.

SILVER.

Calcutta, January 17.

Silver market during the early part of the week was rather steady and prices were better over the lowest of the previous week. Towards the close the tone is again a bit easy. The turnover on the whole was very small. The highest and lowest quotations for the first settlement were Rs. 65/2 and Rs. 64/10. The second settlement is commanding a premium of about -/12/- per 100 tolas in Bombay and Rs. 1/8/- in Calcutta over the first settlement. The stocks both in Bombay and Calcutta are heavy and are discouraging bull holders.

Total exports of sliver from United Kingdom during the week ended January 4, 1935, amounted to £24,000 worth to India. Total imports into United Kingdom during the same week amounted to £206,000.

Of the total exports from China during the first ten months of 1934, 151,605,746 dollars worth went to Great Britain; 42,041,878 dollars worth went to United States and 29,907,012 dollars worth to India.

London Air Mail Week:

Since our last letter prices have been subject to rather wider fluctuations, but the market made a good recovery after the decline seen in the early part of the period under review. On the 21st December prices were quoted at 23 13/16d. for cash and 23 15/16d. for two months' delivery —a fall of ⅛d. as compared with the quotations of the previous day; the sharp decline was due to heavy liquidations by bulls on a poorly supported market. At this level, however, there was a good demand from America and the Indian Bazaars and speculators showed more confidence. With a revival of demand, the trend of prices was steadily upward and the market maintains its firm undertone.

The following were the United Kingdom imports and exports of silver registered from midday on the 17th ultimo to midday on the 31st ultimo:—

SUGAR

Calcutta, January 17.

A slight improvement in Java white, forward positions, took place during the week-end, due to a further increase of 5 points in the selling limit of "Nivas" *viz.*, 3.10 glds. per 100 Kilos for West Coast India Posts. Chinese interests sold about 1,000 tons on the basis of Rs. 3-8-6 for January shipment at Bombay, where European importers are reported to have sold about 600 tons on the basis of Rs. 3-11-0 per cwt., shipment July to September.

The forward position depends on Exchange fluctuations, price regulations by "Nivas" and on the movements of Indian sugar during the next few months.

MISCELLANEOUS

WHEAT

Calcutta, January 17.

A substantial rise in values of all grades was the feature of the local market at the week-end; a considerable business having been done in "futures". Following the general strength of all cereals, wheat prices have reached a level not touched for many months.

Mills are buying Cawnpore grades largely, though other varieties are not finding much difficulty in disposal. There is a disposition to lay in stocks against a further anticipated rise.

Liberal despatches from the Punjab have augmented Karachi holding which stand approximately at 40,000 tons. Other main ports are also handling large arrivals.

Overseas markets are easy. Exports of French wheat, including a cargo to the Far East, have steadied the European markets. It is not expected that Continental wheat will readily find buyers in Britain, as stocks are yet heavy.

Argentine and Australian wheat are offering at the current price-level. Manitolas are quoted competitively.

LINSEED

FIRST ALL-INDIA LINSEED FORECAST, 1934-35

The first All-India linseed crop forecast for 1934-35, which was issued during the last week, shows an estimated acreage under linseed of 2,525,000 acres, as compared with 2,568,000 acres (revised) estimated during the corresponding period last year, or a decrease of one per cent. Whereas C. P. and Berar and Bihar and Orissa show a respective decrease of 41,000 acres and 34,000 acres over the last year, the Hyderabad State shows a gain of 72,000 acres at 293,000 acres.

GROUNDNUTS

Calcutta, January 17.

Owing to higher prices, prospects of sowings of irrigated groundnuts are brighter. Arrivals continue to be favourable in South and North Arcot, though poor in other parts of the Presidency.

Prices show a nett increase of £1-15-0 per ton during the last week. From £12-7-6 for Coromondel machined, January-February shipment, on Monday the upward price movement reached £13-15-0 on Saturday. Shippers buying limits ranged from Rs. 34-0-0 to Rs. 35-4-0 for Ordinary, per French Candy of 531 lbs., ex-coast godowns.

A strong demand for groundnuts oil has come from Hongkong, creating a rather bullish element on the level of prices.

Arrivals of kernels into Madras during the week ended January 5, amounted to 22,457 bags or 1,768 tons against 25,953 bags or 2,044 tons in the preceding week and 43,551 bags or 3,429 tons in the corresponding week last year.

SECOND ALL-INDIA RICE FORECAST, 1934-35

According to the second All-India Rice Forecast for 1934-35, which was recently released, the total area under rice is estimated at 78,486,000 acres, as against 79,762,000 acres (revised) at the corresponding period last year showing a decrease of 2 per cent. Weather conditions have not been quite favourable, but the present condition of the crop is reported to be fairly good. Information regarding the out-turn of cleaned rice though incomplete shows that the outturn in Bengal is 7,771,000 tons compared with 8,880,000 tons during the corresponding period in 1933-34. Bihar, Orissa and Assam show a respective increase over last year of 424,000 tons and 144,000 tons. Burma and Bombay however, show a respective decrease of 265,000 tons and 101,000 tons at 4,968,000 tons and 1,498,000 tons respectively.

STATISTICAL INFORMATION

KARACHI'S FOREIGN TRADE

Statistics of foreign trade for the Port of Karachi for December 1934, issued by the Collector of Customs, show that the increase in total value of imports (merchandise) amounted to 95 lakhs as compared with the figures for December 1933.

The progressive totals for the nine months ending December 1934, show an increase of 1.74 crores or 18 per cent. under imports and 2,55 crores or 31 per cent. under exports.

The total quantity of sugar imported during the nine months ending December 1934, was 41,595 tons, against 49,618 tons during the corresponding period of last year and the total imports of cotton piecegoods for the same period amounted to 166¼ million yards, valued at 2.95 crores, showing an increase of 45 per cent. in quantity and 54 per cent. in value, compared with the corresponding period of last year.

The share of the United Kingdom in total imports of cotton piecegoods during the first nine months of the current official year was 132¾ million yards, valued at 2.35 crores, an increase of 53 per cent. in quantity and 56 per cent. in value, while Japan's share was 30¼ million yards valued 50 lakhs, an increase of 11 per cent. in quantity, and 31 per cent. in value, compared with the corresponding period of last year.

The total quantity of cotton exported during the nine months ending December 1934 was 1,63,535 tons (9,15,792 bales) against 96,716 tons (5,41,611 bales) in the corresponding period of last year.

GOLD OUTPUT IN KOLAR.

The output of the mines in the Kolar gold area in 1933 was 335,773,929 ozs. of fine gold and 26,172,050 ozs. of fine silver against 329,574,899 ozs. of fine gold and 27,781.139 ozs. of fine silver in 1932. Mining operations were carried on in the Mysore, Champion Reef, Oorgaum and Nundydroog mines. The total value of fine gold and silver produced in the mines in 1933 was £2,086,002-2-11 compared with £1,926,505-0-8 (revised) in the previous year.

All the mines paid dividends for the year under report, the total amount distributed being £492,338-12-0 or 32.52 per cent. of the paid up capital of all the companies against £412,865-14-6 or 24.76 per cent. in the previous year. The royalty payable to Government on the gold and silver produced and on the dividends declared during the year was Rs. 18,60,854-10-0 against Rs. 17,26,822-2-0 in the previous year.

A majority of the mining leases granted to the gold mining companies expire in March 1940. Negotiations for their renewal for a further period of 30 years from 1940 have recently been concluded. The royalties payable under the existing leases are five per cent. on the net sale value of gold produced and 2½ per cent. on the dividends declared.

The total quantity of fine gold produced from the time mining operations were begun in 1882 up to the end of 1933 is 17,587,936.711 ozs. worth £77,300,111-1-10. The dividends and royalty paid during the period amounted to £23,425,478-11-2 and £4,089,110-3-7 respectively.

The total number of persons employed in the mining industry in 1933 was 20,263, of whom 335 were Europeans, 421 Anglo-Indians and 19,507 Indians, a total of 11,975 persons being employed below the ground and 8,288 on surface work. Of the latter, 1,125 were women and 489 children under 12 years of age. The average monthly wages paid to European and Indian employees for different classes of work came to £43.76 and Rs. 32.41 respectively during 1933 against £48.14 and Rs. 33.06, respectively during the previous year.

STATE RAILWAY EARNINGS

The total approximate gross earnings of all the State-owned railways for the week ending 8th December, 1934 (36th week) amount to Rs. 174 lakhs, Rs. 3 lakhs more than the figures for the preceding week, and Rs. 1 lakh less than the actuals for the corresponding week of the previous year, and Rs. 5 lakhs more than the actuals for the corresponding week of 1932-33. The total approximate gross earnings from April 1 to December 8, 1934, amount to Rs. 5,927 crores, or Rs. 267 lakhs more than the actuals for the corresponding period of the previous year and Rs. 383 lakhs more than the actuals for the corresponding period of 1932-33.

CALCUTTA COAL STATISTICS

The arrivals of coal and coke at the Kidderpore Docks and other Calcutta stations during the week ended December 29 last, as compared with the figures of the corresponding period last year, were as under :—

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

Trading in the Stock Exchange continued on a brisk scale although during the early part of the session Jute mills' shares were distinctly easier partly owing to the definitely weaker tone in the commodity markets and partly on account of the rumour of the possibility of certain Mills breaking away from the India Jute Mills Association. Government Securities were easier, on the whole inspite of the firmness of the India Government's Sterling Securities in London. Cottons continued dull and neglected while a definitely better tone pervaded in coal section owing to the possibility of the reduction of 15 per cent. surcharge on Railway freight on long distance traffic in the near future. Among Miscellaneous Industrials, Public Utility and Engineering companies' shares were in better demand and sugar shares have once again come into favour. Teas were definitely easier.

Government Securities.—Owing to firmer money market an easier feeling has obtained in the Giltedge section and the fall in the price of securities would have been more pronounced, had it not been for firm Sterling advices. 3½ per cent. Government Paper quoted Rs. 97-14 at the time of writing and although the tendency is somewhat easier, any sharp fall in the price of paper is not anticipated. 3½ per cent. Loan 1947/50 changed hands at Rs. 102-2 ; 3 per cent. Loan 1941 may be placed at Rs. 100-13 and 4 per cent. Loan 1960/70 is quoted at Rs. 110-8 sellers. There are sellers of 1939/44 at Rs. 108, 1940/43 at Rs. 109, and 1945/55 at Rs. 119. The tone at the close is definitely easier. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—The enquiry for Preference shares continued and although prices show no signs of weakening rather more shares were available than of late. Among Jute Mills issues Birla changed hands at Rs. 117, Fort Gloster at Rs. 147 ; Gourepore at Rs. 131 and Waverly at Rs. 84. Among others, Burn & Co. (6 per cent. Pref.) changed hands at Rs. 117 cum-dividend, Indian Standard Wagon (7 per cent. Pref.) recorded a deal at Rs. 127 ; Kumardhubi Engineering (7 per cent. Pref.) was marked at Rs. 83, Titaghur Paper (8 per cent. Pref. Rs. 100 paid up) improved further to Rs. 157-8 ; Indo Burma Petroleum (Pref.) changed hands at Rs. 116-8 and Dunbar Cotton (Pref.) was marked up to Rs. 189-8. Among Debentures only a small business was reported in Calcutta Municipal and Port Trust issues. Among Industrials 6 per cent. (1914/64) Clive Buildings changed hands at Rs. 105.

Other Investment Stocks.—Although business continued on a very small scale Banks' shares remained fully steady. Central Bank's shares were marked up to Rs. 38-4 ; imperial Bank's fully paid up issues are now quoted at Rs. 1,646-8 and Contributories at Rs. 413-8.

Among Insurance Companies' shares, Concord of India was marked at Rs. 13-4 Prem.

Rather more business was reported in Light Railway's share. Government Guaranteed issues were in usual demand on the basis of Rs. 92 but very few shares only were available. Bankura Damodar changed hands at Rs. 91-8 ; Burdwan-Cutwa at Rs. 92 ; and Chaparmukh Silghat at the same figure. Among shares enjoying District Board subsidy enquiry was in evidence for Arrah Sasaram, Baraset Basirhat and Buktiarpur-Behar at last levels.

Among other transport Companies' shares Calcutta Tramways (ordy.) was marked at Rs. 20-4, Calcutta Landing and Shipping at Rs. 15-8 and India General Navigation and Railways (ordy.) at Rs. 120.

Coals.—Dull conditions have obtained and only a small business, of retail nature, was put through.

The improvement manifested in this section during recently has been fully maintained and a general enquiry for shares was in evidence. This optimism is accounted for by the fact that the demand for Coal has increased as indicated by the latest report available from the coalfields and also there is a possibility of the reduction of the surcharge in long distance freight in near future.

Quite a lot of attention was paid to popular stocks among which the following may be mentioned. Amalgamated advanced further to Rs. 26-12 from Rs. 23-8 but are now quoted at Rs. 24-12. Bengal improved to Rs. 292 from a quotation of Rs. 255 but at the time of writing the price is Rs. 285 ; Burrakur Ordinary was marked up to Rs. 15-8 from Rs. 14-4 but again came back to Rs. 15. Equitable advanced sharply to Rs. 38-12 from a quotation Rs. 35 and at this figure there are buyers. Katras Jherria also moved up to Rs. 40 from a quotation of Rs. 34 ; New Bheerbhoom (ordy.) was marked up to Rs. 16 from Rs. 13-8 but again back to Rs. 15-8. New Manbhum advanced further to Rs. 72 but at the time of writing receded to Rs. 68. Raneegunge improved to Rs. 37 but again back to Rs. 36 ; Rewa advanced sharply to Rs. 14 but now a shade easier at Rs. 13-12. Sendra from a quotation of Rs. 13-12 was marked upto Rs. 16-12 but again receded to Rs. 15-12. Standard advanced to Rs. 31 from a quotation of Rs. 29.

Bansedeopur, Bokaro and Ramghur, Hurriladih, Mundulpore, Pench Valley Talcher and West Jamuria were also good features.

Jutes:—Since our last report prices of Jute Mills shares have suffered and all round slump owing to easier Hessians and weaker jute market and on the rumour of the possibility of certain jute mills breaking away from the Jute Mills' Association. On the above rumour 'bears' began to depress the market and consequently the weak holders liquidated. Howrahs recorded to Rs. 63-10 and Kamarhattys came back to Rs. 654 from Rs. 696. Since then a sharp recovery of Rs. 2 was made and Howrahs at the time of writing are quoted at Rs. 65-10 and Kamarhattys at Rs. 670. Among higher priced stocks, Anglo Indias are now quoted at Rs. 550, Bally at Rs. 255, Barnagore at Rs. 220, Budge-Budge at Rs. 398, Champdany at Rs. 225. Cheviot on the other hand from a quotation of Rs. 240 advanced sharply to Rs. 250. Fort Gloster was marked at Rs. 725, Fort William at Rs. 265 ; Ganges receded to Rs. 485, Gourepore to Rs. 845, India to Rs. 552 ; Megna to Rs. 52 and Nuddea to Rs. 75.

Among Rs. 10 stocks, Clives kept very steady round about Rs. 37-8 ; Hukumchands changed hands at Rs. 17-2 ; Empires at Rs. 46 ; Nationals at Rs. 27 and Relliances at Rs. 83.

Electricals.—Public Utility Companies' shares again attracted considerable attention of the market and a fair business was put through. Bengal Telephone (ordy.) was marked at Rs. 18-8, Cuttack Electrics changed hands at Rs. 7-14, Dacca Electrics at Rs. 18-8, Jubbulpore Electrics at Rs. 13-4, Muttra at Rs. 11-4 and Rawalpindi at Rs. 24-6.

Engineering.—This section ruled steady although not much movement in prices was recorded. Arthur Butler kept steady round about Rs. 14-8 without much business passing. Bengal Iron remained unchanged at Rs. 4-14 while Indian Iron and Steel was easier at Rs. 8-2.

Indian Standard Wagon (ordy.) was marked at Rs. 75 and Indian Galvanizing at Rs. 11-4. Kumardhubi Engineering recorded a deal at Rs. 3-8 while Marshalls were easier at Rs. 1-12.

Miscellaneous.—The usual trade passed in this section and there was no fresh feature to report. B. I. Corporation (ordy.) was steady at Rs. 3 ; so also Britannia Biscuit at Rs. 7. Indian Wood Products recorded a few deals round about Rs. 37.

Among Paper Mills' shares, there are sellers of Bengal Paper (ordy.) while there are also no declared buyers. India Paper Pulp on the other hand kept very steady at Rs. 152 and Titaghur Paper (ordy.) at Rs. 21-8. Midnapore Zemindary (ordy.) slipped away to Rs. 80 while Bengal Timber (ordy.) kept steady at Rs. 120.

Sugars.—Sugar Shares have again come in for favour and rather more business was reported. Balarampur are the turn better at Rs. 19-8. Carew & Co. kept steady at Rs. 21-8, Cawnpore (ordy.) was marked up to Rs. 38-8, Champuran to Rs. 22-8, New Savan changed hands at Rs. 14-2, Ryam at Rs. 37-8 and Samastipore Central at Rs. 11-8.

Teas.—Dull conditions have obtained and only small business was put through. Bishunath after coming down to Rs. 80 improved again to Rs. 81, Hattikhira came back to Rs. 27-12, Hasimara to Rs. 45-8, Naga Hills to Rs. 23-12 and Tezpore (ordy.) to Rs. 10.

Advices from London indicate a steady market but this week's local sales were again unsatisfactory.

CORPORATION OF CALCUTTA.

Loan Notification.

Tenders for Rupees 15,56,800 of 3½ per cent. Debenture Loan of 1934-35 repayable 1st December, 1951.

The Corporation of Calcutta having obtained the sanction of the Government of Bengal, under section 97 of Act III (B. C.) 1923, to the raising of a Debenture Loan of Rs. 15,56,800 on the security of the rates, taxes and dues imposed and levied under the Calcutta Municipal Act, 1923, invite tenders for the same.

2. The Debentures will have a currency of 17 (seventeen) years from 1st December, 1934, and will bear interest at the rate of 3½ per cent. per annum, payable half-yearly, at Calcutta or Bombay, at the option of the holder, on the 1st June and 1st December, each year. They are repayable at par on the 1st December, 1951, at Calcutta.

3. Debentures will be issued for sums of Rs. 100 or multiples thereof.

4. Tenders for the whole, or any part, of the loan will be received by the **Imperial Bank of India, Calcutta, or the Secretary, Corporation of Calcutta, up to 12 noon (local time) of Thursday, the 31st January, 1935.**

5. **Each tender must be** made out in the form annexted to this Notification, and **enclosed in a sealed cover** addressed to the Secretary and Treasurer, Imperial Bank of India, Calcutta, or the Secretary, Corporation of Calcutta, Central Municipal Office, Calcutta, and **superscribed—"Tender for Municipal Loan of 1934-35."** Tender forms may also be had from the Imperial Bank of India, Calcutta, or from the Secretary, Central Municipal Office, Calcutta.

6. Each tender much be accompanied by an earnest deposit, Government Promissory Notes, Calcutta Municipal or Port Trust Debentures, currency notes or cheques, for not less than 5 per cent. of the amount tendered for.

7. When a tender is accepted and an allotement is made, the amount payable less the amount of earnest deposit in currency notes or cheques, must be paid into the Imperial Bank of India, Calcutta, on or before the 15th February, 1935. The Debentures will bear interest from the date of receipt of the allotment money in the Imeprial Bank of India, Calcutta. In case of allotment money paid by cheques, the date of receipt will be the date of encashment of the cheque. Interest at 3½ per cent. on the earnest deposits in cash or cheques from the date of acceptance of the tender or date of encashment of the cheques, to the date of payment of the amount due on the allotment, will be paid separately by a cheque along with the issue of Debentures, provided the amount payable on the allotment is paid up on or before the 15th February, 1935.

8. The earnest deposits on tenders which may not be accepted, will be returned on application, and no interest will be payable on such deposits. If an allotment after being made is not taken up, or the full amount allotted is not paid for by the 15th February, 1935, the earnest deposit shall be forfeited.

9. The rate at which a tender is made must be specified in rupees, or rupees and annas, but it must not contain any fraction of an anna. If a rate containing a fraction of an anna is inserted in any tender, such fraction will be struck out, and the tender treated as if the tender did not contain such fraction of an anna. A tender in which the rate is not specified in rupees, or rupees and annas, will be rejected as *null* and *void*.

10. Tenders will be opened by the Finance Standing Committee of the Corporation at 5 p.m. on Thursday, the 31st January, 1935.

11. The Corporation do not bind themselves to accept the highest or any tender and reserve the right to accept any tender either in whole or in padt and make an allotement accordingly.

12. Brokerage at ¼th per cent. will be paid in respect of tenders received through Brokers or Banks, which may be accepted.

BHASKAR MUKERJI,
B.A. (Cantab.), B.Sc. (Cal.),
Offig. Secretary to the Corporation.

Central Municipal Office,
Calcutta, the 14th January, 1935.

FORM OF APPLICATION.

3½ per cent. Debenture Loan of 1934-35, dated 1st December, 1934, for Rupees 15,56,800.

To

The Secretary,

I/We

hereby tender for Rs. of the Municipal 3½ (three and a half) per cent. Debenture Loan of 1934-35, dated 1st December, 1934, for 17 years and agree to pay for the same at the rate of Rupees annas for every hundred rupees allotted to me/us, subject to the conditions stated in the Noificaion dated the 14th January, 1935.

I/We enclose as earnest deposit

(1) Government Promissory Notes
(2) Calcutta Municipal Debentures
(3) Calcutta Port Trust Debentures
(4) Currency Notes
(5) Cheque for Rs.

(Signature).
Address—
Date.....

BURN & COMPANY, LIMITED.

NOTICE is hereby given that the Directors have sanctioned payment of the Dividend on the 6% and 7% Preference Share Capital of the Company for the half-year ended 31st December, 1934.

Dividend Warrants will be issued to Registered Shareholders on and after the 21st January, 1935. Applications by Banks etc., should be supported by the usual form of Indemnity, where necessary.

By Order of the Board,
BURN & CO.,
Managing Agents.

12, Mission Row,
Calcutta, the 12th January, 1935.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent)

Bombay, Friday,
January,18, 1935.

Money was steady throughout the week with interbank call fluctuating between 3 and 3½ per cent., though it closed lower at 2½ per cent.

Exchange.—Exchange market remained very steady with Banks selling T.T. at 1s. 6 3/32d. for Near position and February; 1s. 6 5/64d. for March-April; 1s. 6 1/16d. to 1s. 6 3/64d. for May; 1s. 6 1/32d. for June-September; 1s. 6 1/64d. till the end of the year. Banks are buying 3 months bills at 1s. 6 3/16d.

Securities Market.—Rupee Securities market ruled steady with minor fluctuations and improved slightly at the close. 3½ per cent. Paper, though done as low as Rs. 97-10, closed firm at Rs. 98-5. 1941 were lower at Rs. 100-14; 45/55 down at Rs. 119; 1947-50 at Rs. 102-2; 1943 at Rs. 105-15; 1960/70 at Rs. 110-6; 55/60 at Rs. 117-4; 1935 at Rs. 101-4; 39/44 at Rs. 108; 1940/43 at Rs. 108-15; 38/40 at Rs. 108-7; 6½ per cent. Bombay Development at Rs. 103-5.

Shares.—Remarkable activity prevailed in Steels influencing all sections.

Textiles.—This section ruled steady throughout the week and improved at the close; it is reported that severe biting cold has affected cotton crops in various places; and this has been construed as a bearish factor for mill-shares in general. *Inspite of this, we think highly of Gokaks, which* were done as high at Rs. 230 during the week and closed at Rs. 225-10. It is reported that the efficiency of this company has very much improved, particularly after the installation of new spinning machinery during last year. We also hear that throughout the year 1934, the company has also shown an average profit of more than Rs. 60,000 to Rs. 70,000 per month. At current levels, this scrip offers good scope for appreciation. Bombay Dyeings were better at Rs. 942-8; Central Indias better at Rs. 335; Century closed at Rs. 315; Colaba were higher at Rs. 108-12; Kohinoors at Rs. 223-12; Swadeshi at Rs. 235; Simplex at Rs. 103-12; Morarjees were down at Rs. 1485; New Greats slightly higher at Rs. 223-12.

Hydro-Electrics.—This section ruled active and closed higher. Hydros have improved to Rs. 180 and Andhras firmed upto Rs. 1,750. Tata Powers spurted to Rs. 1,580 and closed at Rs. 1,562-8.

Iron and Steel.—There has been a spectacular rise reaching new high levels in this section. Tata ordinaries which were done as low as Rs. 114-8 touched at a high rate of Rs. 128 and closed at Rs. 127. Deferreds moved up from Rs. 515 to Rs. 592-8 but closed at Rs. 591-4. Second Preference were better at Rs. 173-12.

Cements.—Cements were steady and closed slightly better than the opening during the week. Bundis were in keen demand and business was done as high as Rs. 38-8 at the close. Indian Cements closed at Rs. 392-8; Gwaliors steady at Rs. 123-8; Katni Deferreds have improved from Rs. 1,267-8 to Rs. 1,310 and Ordinaries better at Rs. 381-4; Punjabs higher at Rs. 28-12; Shahabads were up to Rs. 383-12; and Uniteds to Rs. 78.

Miscellaneous.—Belapur Sugars, which were active throughout the week, were done as high at Rs. 275 and closed at Rs. 272-8. It is reported that the Government may announce an increase in the import duty on foreign sugar. Bombay Burmas were higher at Rs. 405 ex-dividend and New shares steady at Rs. 131-4. Petrols were better at Rs. 4-1; Scindhias steady at Rs. 14-14; Bombay Steams better at Rs. 321-4; Telephones steady at Rs. 118-4; Trams were enquired round about Rs. 165; Indian Radio Deferred and Ordinaries quoted Rs. 565 and Rs. 515 respectively.

Banks and Insurance.—Bank shares remained unchanged throughout the week under review. Barodas were steady at Rs. 107; Central Banks at Rs. 38-4; Bank of Indias at Rs. 123; Imperial Fully paids and Partly paids quoted Rs. 1,655 and Rs. 415 respectively. Imperial Bank has declared a dividend of 12 per cent. for half-year ending December 31, 1934. Union Banks slightly better at Rs. 8-1.

Among Insurances, New India closed at Rs. 45-12; Orientals at Rs. 4,510 and Vulcans at Rs. 8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, January, 16.

Government Securities were easier on lower sterling advices and tight money conditions. The share market remained steady, but prices generally showed little change. During the week Mills were in good demand; Rubbers received better support and Sugars were erratic. Teas continued neglected.

Government Securities.—3½ per cent. Rupee Paper was quoted from Rs. 97-12 to 98-4, 3 per cent. 1941 from Rs. 100-12 to 101-4, 3½ per cent. 1947-50 from Rs. 100-14 to 102-6, 5 per cent. 1935 from Rs. 101 to 101-8 and 5 per cent. 1945-55 from Rs. 118-5 to 119-7.

Banks.—Imperial Bank Fully-paids were quoted at Rs. 1,655 cum dividend, Contributories at Rs. 415 cum dividend and Indo-Commercial Banks at Rs. 112 cum dividend.

Among other shares Gokaks were quoted at Rs. 214, Devasholas at Rs. 7-14, Vellamalais at Rs. 8-14, Deccan Sugars at Rs. 285, and Spencer's A and B preferences at Rs. 11-3 and Rs. 12-13 ex dividend respectively.

Transactions were reported in Buckingham Ordinaries at Rs. 210, Cambodias at Rs. 13-8 ex dividend, Burma Corporations at 9s. 5½d., Singareni Collierries Ordinary at Rs. 8, Devasholas at Rs. 7-14, Vellamalais at Rs. 8-14, and Mysore Sugars at Rs. 22-12.

LONDON STOCK EXCHANGE

The general tone of the Stock Exchange was quiet and inactive during the week under review. There was not much activity in the giltedge section and prices were on the whole easier. 3½ per cent. Indian Loan was quoted at par and the same quotation was maintained throughout the week excepting on Wednesday when it sagged to 99½. There were few changes in other securities. On Thursday there was an improvement and 3½ per cent. was quoted at 100, 4½ per cent. at 118, 5 per cent. at 117, 2½ per cent. Consols at 93⅛, 3½ per cent. War Loan at 109⅜ and Victory Bonds at 118⅞ Among other sections, there was a marked improvement in oil shares and the improvement was maintained throughout. Burmas were notable and they were quoted on Thursday at 76-10½ over 75 of Friday last. Minings also showed an improvement but sagged owing to profit-taking. They recovered and on Thursday Kaffirs recorded several gains. Teas maintained the improvement of last week and were practically unchanged at that level. Rubbers were unchanged but showed a sagging tendency on Wednesday. Barnagore Jutes advanced to £17. Industrials were not very well supported but the tendency was steady.

NEW YORK STOCK EXCHANGE

The market was easy at the beginning of the week ending the decision of gold clause. Though still undecided, the market closed better under leadership of special stocks. United States Steels are working 39 per cent. capacity. Brokers loans amounted to 40 million dollars.

COMPANY REPORTS

ADAMJEE JUTE MILLS LTD.

Report for the half-year ended 30th September, 1934:—

The revenue account after deduction of interest, insurance, commission and other expenditure, shows a profit of Rs. 4,73,700-14-8, adding the amount carried forward from last half-year Rs. 30,588-5-11, the total is Rs. 5,04,289-4-7. From this sum there has to be deducted:—Depreciation for the half-year Rs. 1,17,690-4-6, leaving an available balance of Rs. 3,86,599-0-1, which the Directors recommend should be dealt with as follows:—To set aside for Income-tax and Super-tax with surcharge Rs. 68,600 to be carried to Reserve Fund Rs. 75,000, for payment of Dividend on 7½ per cent. Cumulative preference shares at Rs. 3-12 per share for the half-year ended 30th September, 1934, (free of income-tax) Rs. 43,875 for payment of Dividend on Ordinary shares at As. 8 per share for the half-year ended 30th September, 1934, (free of income-tax) Rs. 1,50,000 to be carried forward to next period Rs. 49,124-0-1, total Rs. 3,86,599-0-1.

Our mill worked 54 hours a week in accordance with an agreement between the non-associated Mills and the Indian Jute Mills Association.

Adamjee Hajee Dawood, Mahanlal L. Shah, H. Karmally —Directors.

CHAPARMUKH-SILGHAT RAILWAY CO., LTD.

Report for the half-year ended 30th September, 1934:—

Length of Line.—The route mileage of line open for traffic at the end of half-year was 50.81 miles.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 33,08,898.

The Capital Expenditure during the half-year was Rs. 1,283.

Earnings—Gross earnings.—The gross earnings during the half-year were Rs. 74,643. During the corresponding period in 1933 they were Rs. 84,228.

The decrease was Rs. 9,585 or 10.19 per cent.

Available Balance.—The balance available for distribution is:—

	Rs.	Rs.
Net Profit	42,969	42,887
Balance brought forward ...	17,140	16,989
Total ...	60,009	16,989

As in previous years the guaranteed profits of the company are reduced by the amount of Super-tax paid and thus do not permit of payment in full of a dividend at the rate of 3½ per cent. per annum.

Dividend, and Balance.—The directors recommended that the available balance be disposed of as follows:—Payment of a dividend of Rs. 1-12 per share at the rate of 3½ per cent. per annum Rs. 54,250, less—Company Super-tax and Income-tax Rs. 11,468, net dividend Rs. 42,782, balance to be carried forward Rs. 17,227, total Rs. 60,009.

The dividend if sanctioned at the General Meeting, will be paid on receipt of the amount due from the Government of India.

The dividends paid for the two preceding half-years were at the rate of 3½ per cent. and 3½ per cent. per annum, less tax.

Martin & Co.—Managing Agents.

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A Practical Guide to Current Problems.

The Joint authors of *Indian Finance Year-Book, 1934*, were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented depression has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book. 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934."

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

The Managing Editor,

WORLD OF INDIAN FINANCE

Friday, Evening.

Money conditions have continued, in the main, unchanged. In the middle of the week call money was quoted over 3 per cent. in both Bombay and Calcutta. And though since then, there has been a slight falling off in the rate, demand for money has been persistent. One hardly needs to scrutinise the conditions of the money market in detail when the market's tenders for sterling are still at the giddy heights of £ 55 million, necessitating an allotment of approximately 1.5 per cent. It is noteworthy that tenders have been received at the rate of 1s. 6 1/8d., to the tune of £ 150,000 which were, of course, allotted in full. It is obvious that bankers are still feeling the squeeze for money. And this shows a more fundamental disequilibrium of supply and demand than one would have expected at the beginning of the cold season. As we pointed out in previous issues, the strain of demand on the available resources has developed over a period from various quarters ; and the cumulative effect is experienced to-day when call money keeps almost glued to 3 per cent. and banks are obliged to apply for inflated amounts for the sterling on offer. When we consider the hectic activity that has been going on for months in the giltedge and share markets, and also the interest that has been sustained over gold and silver, it should be no matter for surprise that in the heart of the busy season when the seasonal demand for the movement of crops is also begun, money rates have hardened and show no sign of relaxation.

With money conditions as they are, one knows what to expect of the weekly sales of Treasury Bills. During the last auction, the market's application for Treasuries amounted to only Rs. 153¾ lakhs, which is only slightly in excess of the amount on offer. The average rate of accepted tenders has naturally gone up from Rs. 1-12 per cent. to Rs. 1-15-11 per cent. ; and likewise the tap rate has been put up by as much as four annas to Rs. 1-14. All this is an adequate index of the conditions of the money market. But even more conclusive is the fact that sales of intermediates between January 16 and 21 amounted to only a paltry amount of Rs. 5¾ lakhs, though the tap rate had been increased to Rs. 1-10 per cent. In the course of our review of the money market last week, we observed that the very high tap rate of Rs. 1-10 per cent. will go largely unheeded by a market which will not be in a position to take any large amount of Treasuries at that rate. It would appear that the same might be said of the increase that has been effected subsequently. It is difficult not to overlook the futility of the increase week after week in the yield on Treasury Bills. It is interesting to note that the higher strain on Treasury Bills rates began from the first week of December, Treasury Bills having been steady over the latter half of November last ; and that the Treasury Bills rate has gone from Rs. 1-6-11 per cent. to nearly Rs. 2 in the week under review. And while in the whole of December the increase in the average rate of accepted tenders was less than three quarter annas, in January the difference is nearly eight annas ; and for all the increase that has been affected in the yield on Treasury Bills, there has been no adequate return.

In the last three weeks in which the average rate has gone up from Rs. 1-9-9 to Rs. 1-15-11 the Government have secured very little more than Rs. 4½ crores, which are made up by the sales at the weekly auctions. Intermediates yielded only Rs. 8½ lakhs. And it is highly unlikely that the market has taken any appreciable amounts at the tap rate since the last auction. It is not possible that Treasury Bills yield any considerable amounts so long as the present monetary stringency continues. And as we have already pointed out there is every reason to expect, in the absence of other factors, any appreciable ease in money conditions for some time. We suggested nearly a fortnight ago that it was time for Government to consider whether they should persist in this policy or of rapid and successive increases in the yield on Treasury Bills, which have produced results far from commensurate with the additional charges which the Government will be incurring by way of interest on the floating debt. The present Treasury Bills policy has also contributed to the stagnation in the giltedge market in which Government's interests are obviously vital.

The giltedge market has moved within narrow limits during the week. 3½ per cent. paper has fluctuated within Rs. 98-8 and Rs. 98-2. The local market has, generally speaking, followed the fluctuations in India sterling stocks in the London market. When 3½ per cent. sterling touched £ 100-10 the corresponding Rupee security moved up to Rs. 98-10 ; and when a quieter feeling set in in the London market and 3½ per cent. droped by half a pound, Rupee stocks also receded to the level of Rs. 98-1. One notable feature of the giltedge market during the week is the sudden revival of demand for medium-dated securities ; and it should be noted that though the demand was pronounced, scrips were not offering in bulk. 3 per cent. 1941 has been a favourite and kept in demand at Rs. 101-2. There are also more sellers of the long-dated securities especially the 1960-70 and the 1945-55. But for these differences there has been no considerable weakening in the general tone of the market. It is a testimony to the strength of giltedge that there has not been any fall in the price of Government securities, which are at all comparable with the tightness in money. It is quite understandable that with a weaker position, Government securities would have given way under the pressure of tight money that is now being experienced in both Calcutta and Bombay.

Despite the fact that tight money has not had as much effect on giltedge as one would expect, it is still largely true that the sudden hold up of the rise in giltedge prices is due to the conditions of the money market. As we have been pointing out more or less frequently, the sharp rise in the yields on Treasury Bills has had a great deal to damp the enthusiasm of the operators in giltedge. The giltedge market must feel particularly sore that Government should have followed a Treasury Bills policy which, while it does not considerably improve the ways and means position of the Government, does involve a handicap for the giltedge market. In fact, the persistence of tight money since the middle of December raises the question whether it is not time that the authorities take action in respect of the difference in seasonal demand for money.

Our Bombay correspondent in his weekly report published in this week's *Investor's Supplement*, refers to the possibility of expansion of currency. While a similar belief is not present in the Calcutta financial circles, it cannot be gainsaid that the occasion is apt for Government taking such action. The primary condition that has to be satisfied before Government can effect an expansion of currency, is that the normal equilibrium of supply and demand for money is upset by an increase in the latter, owing to the emergence of seasonal demand for finance. Such a condition would seem to have been satisfied in this instance. It might be said that the present stringency has been caused in some measure by the speculation that has been going on in the stock markets and in Government securities. But this cannot alter the fact of a seasonal demand for money. Nor can it he held out as an argument against expansion, unless the business in the stock exchanges is of an unhealthy and speculative character. There are few instances of shares whose prices are quoted at over their instrinsic value. Generally speaking, the higher level of share prices, which has been attained during the last two, three months, has full warrant in the position of the industries and the companies concerned. When the speculation in the stock exchange is of an unhealthy character, the possibility of additions to currency being utilised to bloster up such a position, may be held out to be a very valid argument against expansion. But so long as the speculation in the exchanges is not pronouncedly unhealthy, and when there is a definite seasonal demand for money, there is, we urge, a case for Government coming to the aid of the money market.

From the standpoint of the Government's ways and means position also, an expansion of currency would seem to be called for. It is some time since the Government developed a position of dependence on the Imperial Bank for ways and means advances. And though these ways and means advances have fluctuated sometimes within wide limits, Government have at no time during the last two months been altogether above the need for borrowing from the Bank. According to the last published statement of the Imperial Bank, the Government have, no doubt, reduced their ways and means advances from Rs. 7 crores to Rs. 4 crores. It is somewhat difficult to trace the sources from which Government have found it possible to repay in part their loan from the Bank. But, as Public Deposits have fallen off by nearly Rs. 1½ crores and as the sales of Treasury Bills during the week amounting to Rs. 1½ crores were not balanced by any correspondingly heavy maturities, it might be said that the reduction of Rs. 3 crores has been made possible by these circumstances. It might also be that Government are realising better surpluses on account of their regular collections. But the period of heavier maturities of Treasury Bills is not far off. And if the present tight money conditions continue, as indeed they promise to, into February, it might well prove that Government will have to experience steady decreases in the volume of their floating debt. By the same token, Government will also have to take from the market large amounts of sterling for which payment will have to be made in rupees. Thus the continuance of the present tight money conditions would mean a decidedly difficult ways and means position. It should also be be considered that this involves higher rates of yield on Treasury Bills and a further setback to the giltedge market or, at least, a more pronounced stagnation.

It is strange that, just at the time when Government should be expected to take on hand the programme of new issues on favouable terms, they should have allowed a setback in the giltedge market and even doubts as to whether the present level of giltedge prices would be maintained. In a few weeks, the Finance Member will be presenting the new budget and also the

(Continued on page 245.)

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

Thursday evening.

There are signs during the last fortnight of a weakening of sterling in terms of both the franc and the dollar, but sterling has suffered more than the franc in relation to the dollar. It is remarkable that the dollar should continue strong in spite of the budgetary proposals contained in President Roosevelt's message to Congress which is dealt with at some length in the Overseas section of this issue. The principal feature of Mr. Roosevelt's new budget is an inordinate increase in public expenditure and consequently an increase of the National Debt. The markets have not interpreted this as a threat to the stability of the dollar. It is understood that what time Mr. Roosevelt released his message to Congress, he also made it clear that the Government did not intend to make any radical departure from the present monetary policy and that the whole scheme of financing public works expenditure will be carried out within the limits of sound finance. Though the expenditure now budgetted is large, and the National Debt will rise to record heights, it will not rise above the capacity of the American nation to sustain it ; and so long as the Government credit continues at its present high level, the Government will always find it possible to finance the new schemes through legitimate channels and they will not have any need to resort to currency inflation. But this is not, of course, to say that the Government have made up their mind on a further devaluation of the dollar.

It is interesting to examine the various questions that arise from the monetary policy of the franc. We pointed out last week that there is increasing evidence that France has set her face against a deflationary policy and has taken to a policy of planning for the revival of national economy. We observed that this planning will necessarily have to be performed through the wellknown instruments of cheap money and regulated competition in internal industry. Since then, details are available of the scheme of the French Government and these are dealt with in our Overseas columns this week. But it would appear that the changes originated only in a desire to provide certain technical facilities in the Paris market. Doubts were first entertained in London whether France was regaining her ambition to set up Paris as a rival to London as an international monetary centre. There has been a reassurance since that Paris has not embarked upon a similar adventure. Possibly the Government have started to prepare for the financing of the inevitable deficit in the national budget. The financial position of the French Government is such that however much they might try to secure economies, deficits would be unavoidable ; for the recovery of French industry, even if it were to happen, would take a long time to get into stride and shower benefits on the Government revenue. Besides, France cannot get over the necessity of increasing her defence expenditure. In spite of the international conferences, France has no choice but to disregard the illusory prospects of success and to make her safety sure by increasing her defence. The burden of the defence in the end will have to devolve on the Bank of France ; and if the necessary action were to be taken all of a sudden, the public might feel staggered by the changes and even a crisis might be precipitated. In order to avoid such unwelcome developments the Government have prepared the public from a considerable time ahead. The change in the Governorship of the Bank of France and the provision and rediscounting facilities for French Treasury Bills, have been carried out only towards this end. At present the policy is restricted to the provision of cheap money conditions ; whether this aim will be secured by the provision of rediscounting facilities for French Treasury Bills remains to be seen.

But whatever the origin of these measures may be, there is no doubt they are growing into broad policies and will soon cover the entire French economic life. Once the French Government put their hands to the task of revival of national industry, they will be led, as other governments have been led, step by step to every new measure which they have formerly shield at. It is interesting how monetary policies are so largely governed by the policies in regard to the general national economy. But what is important from the standpoint of international finance is that France will pursue a deflationary policy, and this, we state, marks an advance towards that crisis in which the solution of outstanding problems will be rendered necessary. We publish this week, elsewhere in this issue, a contribution from Mr. Francis Williams, City Editor of the *Daily Herald* London, on the question of stabilisation. It will be seen that Mr. Williams is of opinion that though stabilisation is in the air again it is likely to stay there.

It is true that France wants stabilisation, that Britain would be prepared for it and even President Roosevelt is less opposed to it than formerly. But, Mr. Williams argues, the two latter countries would have stabilisation only on their terms and the terms are the difficulty. Britain would be opposed to anything which involves the abandonment, not to speak of the reversal, of her cheap money policy ; and in the present conditions a Stabilisation Agreement which would permit the continuance of cheap money in London would be difficult to conclude.

It is of great interest to India that emphasis is laid on the continuance of cheap money. Though in these columns we expressed the opinion that there had been progress towards making some kind of *pourparlers* possible, we gave it as our considered opinion in the course of our money market review, that it is unreasonable to regard a stabilisation agreement as imminent and to apprehend on that basis a reversal of cheap money policy and a reaction in the giltedge markets. We are glad to find that Mr. Williams holds the same view, which is apparently shared by large sections of the City in London.

The view that stabilisation is imminent has its origin not so much in the changes in France as in the reference of the American Attorney General to this question in his arguments before the Supreme Court on the gold clause question. The Attorney General said that an adverse decision of the Supreme Court on the validity of the gold clause, would not only involve the American Government in a colossal additional expenditure, but would also jeopardise the chances of Stabilisation Agreement between the principal nations, which is of such paramount importance to the world as a whole. This statement has been interpreted by many as an indication that consultations have already been made amongst the principal governments towards this end and that some sort of stabilisation is imminent. It should be easy to see that the Attorney General referred to the Stabilisation Agreement only with a view to impress upon the Supreme Court the enormous importance of the question and the incalculably dangerous consequences of an adverse decision. The position in international finance now is such that it is equally necessary to recognise the progress that has been made and, at the same time, to refrain from any exaggeration of its extent or significance.

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, January 22. The total amount offered was Rs. 1,53,75,000. Tenders at Rs. 99-8-9 and above were accepted in full and those at Rs. 99-8-0 were allotted approximately 98 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-15-11 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, January 29. Successful tenderers should make payment on Friday, February 1. Other conditions are as usual.

Three months' intermediates will be sold from January 23 to 28 at Rs. 99-8-6 per cent. subject to the conditions previously announced.

Three months' intermediates sold from January 16 to 21 amounted to Rs. 5,75,000.

STERLING TENDERS

The Controller of the Currency notifies that or Wednesday, January 23, tenders to the amount of £150,000 (one hundred and fifty thousand) at 1s. 6⅛d. were received and allotted in full. Tenders for £55,350,000 1s. 6 3/32d. were also received and allotted approximately 1.5 per cent.

£1 million will be offered for tender on Wednesday, January 30, on the same conditions as previously announced.

PLANNED ECONOMY FOR INDIA

Idealism, Mr. Bertrand Russell once observed, is the offspring of suffering and hope, and is born when a period of prolonged suffering approaches its visible termination. The depression marked the climax of India's misfortunes ; and though it is, undoubtedly, a world phenomenon, it is still largely true that it was in the womb of our earlier economic history. When such a depression shows signs of lifting, it is natural that economic idealism should sprout vigorously in men's minds and attempts should be made to conjure up a radiant picture of India's future. But idealism would be but an impotent longing, if it cannot think out ways and means of realising itself ; and during the last one year, many minds have tried to map out the progress of Indian economy. It were well to recognise at the outset that planned economy in the case of India would not be a mere imitation of the vogue that has of late spread so fast from Soviet Russia. Though, we, too, might bow to Russia's moral conquest of the world, it should not be forgotten that no progress whatsoever is possible today except on the basis of a preconceived plan. The whole machinery of Indian economy is not only out of joint, but it is out of date, if not exactly ill-conceived, worn out and thoroughly unserviceable. It is not an organism in which the strengthening of one or a few parts would vivify the whole. Much less applicable would be the now rightly dishonoured theories of individualism and *laissez-faire*. Our problems are such as have no like in the economic history of any country. In the first place, we lack the power to harness, through the agency of the Government, the entire social resources to the task of economic progress. Not only can we not expect foreigners to command the same enthusiasm as our own countrymen, but there is often a conflict between the interests of the country and the interests which, in the last resort, the Government have to heed.

* * *

But it would be unwise to regard this as the only or even the most effective obstacle in the path. The character of our economic problems is such that in many matters we may be said to be enclosed in a vicious circle. It is unnecessary to adduce instances of this. To take the most elementary need, namely, elementary education, it is not untrue to say that it will not be easy to achieve except with an increase in the taxable capacity of the people ; and there can be no workable plan of increasing the national wealth which is not based on elementary education on a mass scale. More or less the same may be said of the relation between agriculture and industry. And even if we take each as apart from the other, there is no one measure which can assure us of success or even provide us with a good start. In agriculture, we are faced with the appalling illiteracy of the people, the colossal indebtedness, physical debility, mental inertia, the primitive character of the methods of cultivation, the difficulties of providing modern implements and modern equipment. Likewise in industry, the lack of savings and, consequently, new capital available for investment, the absence of a large class of real industrialists, want of technical training in the higher rungs and skill among the workmen. The task is, indeed, of an uphill nature; and though this is hardly an argument for persisting in an attitude of helpless fatalism, it should be recognised that the lure of planned economy leads one to an immeasurably difficult task.

* * *

Many attempts have been made of late in this sphere ; but the latest by Sir Visvesvarayya calls for most for our attention. Other likely authors of economic planning for India must have certain obvious defects. Academic economists are apt to go off at theoretical tangents. Followers of Gandhi, might, and often do, lay stress on certain matters of sentiment which have not the same appeal to all classes. Socialist writers are out of sympathy with governments and businessmen, who have a large part to play in economic uplift. And if industrialists or businessmen were to apply their minds to economic planning, they will be found to lack that habit of thought which conceives measures of popular, as distinct from sectional, well-being.

* * *

Sir Visvesvarayya is, as is well known, one of the most successful administrators India has produced. He has watched Mysore respond to the beneficial measures of his regime. He has known what it is to think of a people as a whole and evolve in his own mind schemes which are calculated to further the common interest. He is an engineer of outstanding abilities. He is well acquainted with conditions in British India. He was the Chairman of the Economic Enquiry Committee ; and the knowledge which he gathered in that capacity must make up in large part for his lack of training as an academic economist. An economic plan formulated by such as he is worthy of the most careful consideration.

* * *

Whatever one might say of the plan which Sir Visvesvarayya formulates at the end of his book, there is no doubt that the preliminary chapters form the most forceful presentation of the facts relating to India's backwardness. His practical mind has no use for vague generalisations about the appalling poverty or about the masses living on one meal a day. The Appendix consists of a number of tables which give, on a comparable basis, the statistics relating to India and other foreign nations.

* * *

It is hardly necessary or feasible to recite here the statistical data afforded in the book ; but it is well to note that such data are generally omitted in most works on planned economy and that they are important not only for stinging the conscience of Government and public, but also as the indispensable basis of any economic plan for the future. Not that all the necessary data have been gathered or that they are easy to gather. And Sir Visvesvarayya points out in more than one context in the book that, however important the statistical data may be, the inauguration of a plan cannot await their full collection. He is of the opinion that the formulation of a plan and the collection of the data should go hand in hand and that the beginnings of the work should not be delayed merely on the ground that the statistical data are not to hand.

* * *

One can guess that the greater part of any work on economic planning is taken up by the scheme of administrative changes and a formidable array of

figures purporting to show the economic goal for the country to be reached at the end of a stipulated number of years. Though most authors imagine that to give such an administrative framework and to provide the figures of production as they should be at the end of a certain period is a great contribution to the economic progress of the country: these really do not represent any solution of our principal problems. It is true that much will depend upon the administrative machinery that will be devised to take care of the plan, both in its initial stages and during its subsequent progress. But the form of such administrative machinery cannot be regarded as a problem in itself. For one thing, if and when the Government agree to inaugurate a scheme of planned economy, their ideas are hardly likely to be affected by the proposals of individual writers. For another, the machinery will depend a great deal on the nature of the plan and the methods adopted for realising it. Nor should there be much difficulty about giving tentative estimates of present production and asking for fanciful increases during the period of the planning.

* * *

What India needs to-day is the benefit of careful thought on the fundamentals of the problem. There is often more thought spent on the later stages of the plan than on the question of how to get on the move. It should be remembered that in Russia the figures of the first Five Year Plan had to be revised; but the authorities found little difficulty in carrying out the revision in the light of actual experience. It is obvious that such changes would be found to be necessary in the most carefully laid plans. And in the case of India the margin of error is bound to be so large that there is no purpose in trying to give a mathematical exactness to the production after a number of years.

* * *

As we said already, the important point is how to get on the move. It is easy enough to point to foreign domination as the one stumbling block, and draw up a whole scheme on the supposition that India will be ruled by a hand of selfless patriots of the same way of thinking. It were even easier for the author of planned economy to constitute himself into a Stalin, that is, mentally, and draw up the series of fiats which will turn this land into a very Heaven on earth. An economic plan to be useful must take full note of the objective conditions and the rate at which they might improve in the future. It should have such close reference to the conditions that it should be possible for its supporters to put it into force immediately without waiting for the hand of God to change such conditions in ever so small a degree.

Sir Visvesvarayya has not fallen into the errors we have indicated. His aim is to formulate the scheme in such a way that, provided it secures a certain measure of public support, the work can be begun without any considerable delay. Not that he fights shy of criticising the present government or pointing out the harm that present policies are doing to the country. He emphasises that Britain's interests in India as one of her principal markets has stood in the way of our industrialisation, and that Britain will not willingly surrender her privileged position. He criticises the White Paper constitution freely and emphasises the importance of a truly popular constitution for working out any scheme of allround economic progress. But all the same, he is content to outline his scheme, which will not in the initial state come up against our more crucial economic problems. At one stage he draws up a scheme of concessions to Britain, which, he hopes, would induce our rulers to withdraw their opposition to our scheme. But in the last resort, Sir Visvesvarayya insists, the full support of Government to a comprehensive scheme can be won only by unanimous popular support of a clear-cut plan, a support so unanimous and determined that Government would be virtually without any option.

* * *

But as we have hinted already, the attitude of the Government and the obstacles presented by the larger political problems need not concern us in the initial stages of our plan. We have, indeed, a great deal of ground to cover before we shall have to stop and pause over these. And it must also be said in fairness to Government that they are now in a mood to co-operate in movements for rural reconstruction, if they are free from suspicions of political contamination. If the best minds in India succeed in pointing out how the beginnings of rural reconstruction may be made, we venture the hope that Government will not be found to deny their co-operation. To our mind, the value of Sir Visvesvarayya's plan lies in its realisation that there is a great deal of work of an educational character to be done before the strictly economic part of the plan can be put into force. There is at first the appalling illiteracy. There is also what may be called the unbusinesslike habits and outlook of the average Indian. There is the lack of capacity for common and co-operative endeavour. There is none of that zeal for progress, that fever of enterprise, without which the most frantic efforts of a beneficent government will run to waste.

* * *

To change these conditions is the first task of the reformist. It is a work which no government can be justly called to do by themselves, and like

CALCUTTA.

wise no Government worth the name would be justified in keeping aloof from such work when it is essayed by private individuals. The machinery of economic planning, as devised by Sir Visvesvarayya, is conceived in such a way as to bring Government and people in close touch and collaboration but to leave for the latter a clear field for the promotion of co-operative effort. He contemplates a number of local boards composed of the mnn of the locality, prominent merchants, agriculturists, educationists and others who would make a special study of the needs and resources of the locality and who will be generally responsible for executing those parts of the plan which may be deemed to rest on them.

* * *

To this proposal for Local Boards, we attach the greatest importance. For such Boards will be found to be the most useful and effective instruments of social progress. In the first place, they are the only means of stirring popular interest in, and popular enthusiasm for, the economic plan. Even should the Government be lukewarm about economic planning, either out of scepticism or for any other reason, these Boards will prove an alternative and in many respects, a better instrument of progress at least in the initial stages. For, as we said earlier, the first task that we have to accomplish by way of preparing for economic progress is to create that yearning for better economic conditions, which is so sadly lacking to-day. Enthusiasm is after all an infection; and it must be assiduously spread over the masses, and so completely that there will hardly be one man left who will not be actuated by the idea of more efficient work and more tangible results. It is true that the greater part of our work lies in improving the efficiency of agriculture, we have to stir the masses out of their pathetic contentment. And where the masses are illiterate, the usual methods of propaganda through the written word will not suffice. Every locality must be goaded through the incessant efforts of its prominent inhabitants into new activities. There is in the rural areas a great deal of work which will get accomplished in an almost miraculous manner, once the people can be brought to recognise its importance.

* * *

Even the removal of illiteracy can, we believe, be attained, once each locality recognises its corporate entity. Parochial patriotism, once it is aroused, might conceivably result in the institution of a number of free schools which will cut the Gordian knot of financial difficulties. We would, for our part, like to see, as a preliminary to the ten year plan a five year plan of elementary education, to be achieved through each educated man pledging himself to the elementary education of at least five children, to whom the ordinary facilities of education at school is not available. Such a pledge should not be difficult to accomplish in rural areas, where the illiterate classes live close to the educated middle class men. If a person like the Mahatma takes up this programme, we have no doubt it will be crowned with success in a shorter period than five years. If men can be got to pledge themselves to spin yarn and weave cloth, cannot every decent man be induced to assist in the removal of the curse of illiteracy?

* * *

Once illiteracy is removed without getting enmeshed in the financial tangles of any scheme of compulsory elementary education, the rest of our path will be found to be comparatively clear. The Department of Agriculture and the Department of Industries will find in the masses a more fertile soil in which to sow the seeds of progress. Improved methods of cultivation will be more eagerly followed. The revival of cottage industries along the more modern lines of Janpan or Switzerland will be found to be more feasible. The Bulletins giving information about markets, the hints about marketing, the literature on co-operation, dairy farming and other matters of interest to a predominantly agricultural population will be more intelligently scrutinised and better assimilated. The efforts of the educated and comparatively well-to-do classes to go out and teach the poor children will substitute a new goodwill in the place of the present rancour between class and class. Every locality will be electrified into a new social conciousness which will provide a powerful start for any economic plan.

* * *

Though Sir Visvesvarayya does not contemplate the removal of illiterary through the voluntary efforts of the higher classes, he lays equal stress on the need for creating the new consciousness and fostering it in such a manner that to plan for the achievement of every common object would become a habit with the people. Space does not admit of any detailed consideration of the more tangible parts of Sir Visvesvarayya's plan. They are based on estimates of present production and the needs of the country. He follows the familiar way of cutting from the list of imports into this country the goods which India is fitted to produce. He emphasises the importance of affording the indigenous producer a preferential claim on the home market, that is, protection. And he also details the ways by which the fitness of India for the pursuit of industry can be secured.

* * *

But we believe that the weakest part of Sir Visvesvarayya's scheme is the financing of the whole plan, which he expects to be done by means of a colossal loan. Though we have no doubt ourselves that such a loan would not fail to be productive, it is doubtful if a loan subscribed for by private individuals is necessary for financing the scheme. Loans for this purpose are, undoubtedly, out of date. It ought to be possible to find the wherewithal for these scheme through inflation of

AS MUCH AFRAID OF A FALL AS A FEATHER

A Godrej Safe with all its ponderous weight is as much afraid of a fall as a feather. Read below what the Quilon Bank says. This has been proved time and again. The other day a Godrej Safe was caught in a terrible fire and fell four floors to the ground on the hard stone pavement without any harm coming to it.

THIS PATENT 16-BEND JOINTLESS GODREJ SAFE

has no joints in it that could be broken by a fall or by burglars. The entire body of Safe is made out of a single continuous plate by bending at 16 different places. Also, double-bending of front flanges to form jointless door-frame makes both the body and the door-frame immensely strong against breaking by fall or wedging by burglars.

THE QUILON BANK, LIMITED.

Madras, 14th July, 1934.

Messrs. GODREJ & BOYCE MFG. CO., LTD., MADRAS.

DEAR SIRS,

Our Mysore Agent informs us that the big fireproof **Godrej Safe, weighing nearly 20 railway maunds,** which we recently purchased from you for that Branch, was being hauled up by means of pulleys and ropes at our Mysore premises when the chains broke accidentally and the Safe **fell down from the second floor, from a height of nearly 30 ft.** But, we are very happy to inform you that but for two small dents and a few scratches to the paint, there was **not the slightest trace of damage to your Safe.** This is evidently due to the jointless body construction and the immense strength, which you justly claim for your safes.

Wishing you every success.

Very truly yours,
Sd. THOMAS JACOB,
Agent.

currency. The danger of inflation lies not in the addition to currency but in the failure to secure corresponding additions to the total volume of goods and services. With a careful programme of economic expansion in hand, such a danger can be easily avoided.

* * *

Over the question of the value of the rupee, too, Sir Visvesvarayya shows no sure touch. He speaks at a stage of leaving the rupee to find its level, though obviously in times like these the dangers of an unregulated rupee would far outweigh the advantages of any possible depreciation. With Indian's balance of payments as it is, and with our prospects of foreign trade as they are, there can be little doubt that a definite cut in the rupee would be a necessary preliminary to any scheme of planned economy for India. Another point which we would like to make special mention of, is that Sir Visvesvarayya has made little or no reference to building among the productive activities which he has listed in his plan. The potentialities of well-planned building activy to radiate prosperity and lubricate the wheels of production and distribution are, indeed, immense. In the rural areas, it would for some time provide additional employment for the agriculturists in their seasons of leisure. In the urban areas it would give a fillip to the heavy industries and to engineering, industries on which Sir Visvesvarayya lays no little stress. These shortcomings only serve to emphasise the value of the work which the great statesman of Mysore has done in providing that must assuredly be the basis of any concrete scheme of planned economy for India.

CEYLON BANKING COMMISSION REPORT

We are now in possession of a copy of the Report of the Ceylon Banking Commission ; and this renders possible a fuller estimate of the work done by Sir Sorabji Pochkhanawala and his colleagues. Our earlier impressions and ideas regarding the report have been confirmed ; and we are particularly gratified to find that the Commission has a good grip of the fact that banking is not merely one of the many lucrative businesses but the very lifeblood of a country's national economy. Sir Sorabji and his brother Commissioners have done more than make recommendations for the improvement of the banking system of Ceylon. They have indicated the lines along which the island of Ceylon may set about economic planning with a view to improving its entire economic outlook.

* * *

The Commissioners have made an exhaustive study of the existing banking and credit agencies in Ceylon. The early history of banking in Ceylon is a tale of miserable failures. A study of the causes of the collapse of the indigenous Bank of Colombo reveal the irregularities that were rampant in the sphere of banking in the island. Loans were made to shareholders under security of bank shares and 50 per cent. of the deposits were lent to Directors against these shares and against immovable properties. The staff were not qualified and were inexperienced—in fact, all the abuses that may creep into banking were there. Then the Commissioners discussed the commercial banks of Colombo. While these have helped materially in mitigating the scriousness of the credit situation in the island, their operations have been mostly confined to the capital city. Then there are the exchange banks ; these are concerned mainly with the financing of the foreign trade of Ceylon and their internal lending policy is rigid, and unsympathetic. The Ceylonese *clientele* have to go through the Shroff who not infrequently indulges in the indefensible practice of extorting commission from them. Besides, there is almost complete lack of contact between the management of these banks and the seekers of credit. There is a growing sense in the island that these banks are swayed by racial discrimination in the matter of distribution of credit. Although such a wholesale charge springs often from ignorance of principles which govern commercial advances, traces of such differential treatment can certainly be discerned in practice. Then there is the Imperial Bank of India. It is restricted no doubt by provisions of the Imperial Bank Act, but its lending policy is somewhat similar to that of the exchange banks. There are also a few Indian and Ceylonese joint stock banks. These do business on a modest scale and are mainly interested in the supply of remittance to planters. The State Mortgage Bank is handicapped by complications in title. There are also brief references to the Loan Board which is an offshoot of the judiciary, the Cheetus which is a long-established and malicious credit institution, the Chettiars, who have played no mean part in the economic development of the island, the pawnbrokers of the usual usurious and hard-hearted class, the boutique-keepers and the eternal money-lenders of whom the familiar Afghan is the worst type.

* * *

The Government play an imperceptible part in the supply of credit to the market. They keep approximately Rs. 20 million with the banks and help the credit system through the local Loans and Development Fund and through the co-operative bodies.

Having thus discussed the defects and good points of the existing banking and credit institutions, the Commissioners make their proposals for the establishment of a State-aided bank, which on unassailable grounds, they prefer to a State Bank.

> "Recommendations are made in regard to the capital and constitution of the bank, which, among other things, provided that the initial capital of the bank should be Rs. 10 million, out of which the State should subscribe Rs. 8 million. The public should be offered 40,000 ordinary shares of of Rs. 25 each for the present and thereafter the remaining 40,000 ordinary shares should be issued at bank's option. Ways and means of Government are discussed for providing this money, and it is clear that there are ample resources from which the capital can be found. When things improve Government may sell off their holdings. Government are not required to assume any other responsibility in regard to the liabilities and deposits of the bank. With a properly regulated constitution and efficient management there should be no risk of loss of capital contributed by the State.

In respect of the manner of raising the capital the Commissioners recommend that the capital of Rs. 10 million should be divided into Rs. 8 million worth of 3 per cent. cumulative preference shares of Rs. 100 each and Rs. 2 million worth of ordinary shares of Rs. 25 each, on condition that the preference shareholders may convert their shares into ordinary shares, if they so desire, at the end of 5 years. The State should subscribe to the preference shares. Advantages of Government taking up preference shares with the option of conversion into ordinary capital are discussed and it is further provided that if the working of the bank should, at any time, disclose a loss of one-third of the capital and reserve, it should stop its activities in the interests of preservation of the capital put in by Government. In order to facilitate Government subscription it is proposed that only 50 per cent. of the amount payable on preference shares should be called up in the first year and the balance in two instalments of 25 per cent. each, at intervals of not less than six months each. In regard to the ordinary capital, it is suggested that only half should be offered to the public in the first instance and the balance kept over until some favourable opportunity arises. Rs. 15 is to be called upon application and allotment, and the balance in two calls of Rs. 5 each, at intervals of not less than six months. Voting power of shares is restricted—one vote for the first five shares and thereafter one additional vote for every subsequent 25 shares.

* * *

The Commission also enquired into the banking regulations, the local handicaps of credit agencies, the defects in insurance laws, the misunderstandings caused by Business Names Ordinance and have made suggestions for improvement. Under the heading of

general economic improvement may be included the Commission's recommendations about industrial finance. The financial requirements of major industries are generally of two kinds—for capital purposes and for working expenses—and the Commission recommend that state-aid to industries should be given through the agency of the State-aided Bank to be established. It is in the opinion of the Commissioners too premature to establish industrial banks and the cottage industries may be financed through co-operative banks and urban credit societies. The Commission have also recommended the formation of marketing societies for the better marketing of the produce of the island. The Commission are of opinion that no change should, for the present, be introduced in the basis of the monetary system of Ceylon as, in their opinion, it may lead to profiteering and high rates of interest and cause nervousness in external capital. Finally, the Commission suggest the formation of an Economic Advisory Council formed of officials and non-officials with a view to plan the economy of the island.

HOLIDAY EXCURSION TRAINS

A feature of railway service which is growing in popularity is the conducted excursion special, which offers planned facilities, both in regard to fare and accommodation. These specials running during short holidays cater to a section of the public who have either not the leisure or the money to swell the ranks of regular holiday-makers. Places of historical or religious interest within easy reach of Calcutta are selected by Railway Publicity Departments and passengers are provided with sleeping accommodation. The moderate fare is inclusive of meals and conveyance charges. There are many places within fifty miles of Calcutta that are worth seeing and a service that makes them accessible to the city worker has an educative as well as a social value. In developing this branch of public utility railways have shown a commendable spirit of enterprise. The satisfactory response has encouraged railways to extend the service. On the Eastern Bengal Railway, for instance, these conducted tours have become a part of their seasonal booking, which is now open for an excursion to Plassey and Murshidabad between 8th and 11th February and the the *Ardhodaya Joga* Bathing Festival on the 3rd February, particulars of which are available from the Publicity Bureau, 3, Koila Ghat Street, Calcutta.

STABILISATION AGAIN IN THE AIR

BUT LIKELY TO STAY THERE

CONTINUED FAITH IN CHEAP MONEY

By Francis Williams

City Editor, The Daily Herald, London.

Stabilisation of the £ and the franc, with the dollar as a prospective recruit to the new international army of gold, is in the air again.

It is likely to stay there.

It is true that it has been discussed by Mr. Montagu Norman and M. Tannery, the new Governor of the Bank of France, at the meeting of the Council of the Bank for International Settlements at Basle just held.

It will be discussed at even greater lengths by members of the French and British Governments during the visit of M. Flandin and M. Laval to London.

But neither at the Bank of England nor at the Treasury is an early stabilisation agreement regarded as at all probable.

France wants stabilisation. Britain would be ready for stabilisation, on terms. As for the United States, although President Roosevelt has said nothing definite yet, there are good grounds for believing that, hard pressed as he is by the necessity for substantial Government borrowing in the future to finance his Budget deficit and public works scheme, he also would be more inclined to stabilisation than formerly in order to increase investment confidence. But, again, only on terms.

And terms are the difficulty.

Before there could be any stabilisation which would last for any length of time and which could be worked successfully by the operation of Exchange Funds as a prelude to an eventual return to the Gold Standard, some revaluation of international currencies would be necessary.

That revaluation to bring the three currencies nearer to equilibrium would necessitate either a considerable appreciation of the dollar or a considerable depreciation of the franc.

Mr. Roosevelt is opposed to any dollar appreciation and the British Government does not wish to do anything to incite a devaluation of the franc, even if M. Flandin would consider devaluation, which he will not yet.

Theoretically, exchange stabilisation would help international trade. But if in practice it were to mean an appreciation of the £ in terms of the franc, it would almost certainly result, for the time being at any rate, in making British goods dearer in international markets and thus reducing Britain's present share of international trade.

And the British Government, which is now more than a little troubled by the fact that the 1933 trade revival is definitely slowing down, will not do anything which might make matters more difficult for British exports.

It prefers for the time being to gamble on the effects of a continuance of cheap money.

In this cheap money policy, it is now in process of establishing a new record for all time for the duration of the period during which a 2 per cent. Bank rate has been in existence. The record of 133 weeks between February 22, 1894 and September 10, 1896, will have been broken at the time these words appear in print ; and there is no sign, or, indeed, any likelihood, of any alteration in the bank rate for many weeks further.

But although cheap money has done much to assist British trade recovery, it is becoming clear that its usefulness as a sole agent of revival is nearly at an end.

That is the reason why there are now increasing reports of a major Government financial operation in the near future.

These reports suggest either a conversion of Local Loans stock or a national housing loan.

My information is that nothing has yet been definitely decided by the Treasury. But the Government may decide upon action before very long, because it is becoming increasingly perturbed by the growing inclination even in the City to regard a Labour victory at the next General Election as a possibility.

It is likely to wait until the public reception to Mr. Lloyd George's new campaign for a more determined onslaught on the depression can be gauged.

If Mr. Lloyd George succeeds in raising a substantial amount of public support, then the Government may decide to act. It is being pressed to do so already by the fairly influential body of the younger Conservatives and also by a not inconsiderable number of people in the City.

In addition, representations are, I understand, likely to be made by a number of Municipal authorities, particularly in the distressed industrial areas, for a reduction in the rate of interest charged on existing loans by the Public Works Loans Board.

These loans are mainly for housing purposes and are financed by borrowings on Local Loans stock. A Local Loans conversion would, therefore, be the best way of dealing with this problem ; but it is complicated by the fact that a very large proportion of Local Loans stock was issued at a substantial discount, so that there would be a subtantial loss on the repayment of any stock which was not converted.

The Treasury is, however, I am informed, now examining the possibility of conversion, the operation being made more feasible by the fact that a considerable percentage of the total amount of the stock on issue is held by Government departments. The matter is likely to be raised in Parliament at an early date.

A Local Loans conversion seems a more likely operation by the Government than a National Housing Loan, as Mr. Neville Chamberlain is opposed to the policy of big Public Works developments. The Government may, however, be forced to do something in this matter for the political reasons previously stated.

It will, in any event, continue to maintain cheap money both out of the belief in the value of cheap money alone during a period of depression and

Dewar's "White Label" Whisky

Clive Street Gossip

Dewar's "White Label" Whisky

Eavesdropper writes from Bombay:

The election of Mr. Manu Subbedar to the presidential chair of the Indian Merchants' Chamber must be considered an interesting innovation. For the first time, the Chamber is to have a Chairman who can be deemed both a practical businessman a first-rate academician in economics and public finance. Manu was the youngest Professor of Economics in the Calcutta University; and he gave up what must then have been deemed a lucrative and promising career in education, for the more strenuous life of a businessman where the stakes and hazards are bigger and the fortune fluctuations wider. In business, his firm grip of the fundamentals of economics has been so valuable an asset that, from the very commencement of his activities in this city, he has been accorded a seat amongst the *elite*. He thus began his Bombay life, with an assured place in the top rungs. In subsequent years, his theory has aided and abetted his practice; and his practice has strengthened and stabilised his theory. This admirable blend is as valuable as it is unique; and the Chamber Committee has drawn on this precious reserve for nearly two decades, so that the presidentship now conferred on him is but a fitting recognition of a contribution to the life and activity of the Chamber, which Manu, and Manu alone, could have made.

In fact, it seems to me that recognition of his service has come somewhat belated. Further, it is my belief that a body like the Federated Chambers has done itself great injury by failing to enlist his active participation in its deliberations and its counsels. But, then, there are wheels within wheels. In all commercial bodies, there is ever manifest a tendency on the part of the caucus in power to keep all power in the hands of the caucus. The Indian Merchants' Chamber would have had Manu as its chief and head long ere this, except that it was not free from the manœvring which beset Chambers. I have, therefore, no hesitation in proclaiming that the Chamber has honoured itself by honouring Manu; and now that the prophet has won recognition at home, the future must hold further opportunities for his rendering service in the wider interests of India and on an All-India platform. In the New India that we all dream of, an Indian Finance Minister, or Indian Railway Member, should find plentiful occasions for harnessing his talents and his rich experience. Meantime, the elders in the Chamber have done well in letting his election be unanimous. At one time, I thought that personal feelings might be allowed to rob this recognition of its grace. I congratulate the elders on their wisdom and taste and hope that this gesture on their part would enable bitter memories of the past to be effaced.

I have known Manu for sixteen years, during which time he has, as I have, gone through ups and downs. Its was natural that we often compared notes and exchanged confidences and no one has known, better than I do, the ardour of his fight or pluck and resourcefulness he has shown. He can fight like a Trojan; but essentially he is a man of peace. Not unlike the Mahatma, who is a moderate by nature and often an extremist in action, Manu is a man of moderation, but strange situations have often forced him into extreme positions. So driven, he would not be wanting in the temerity to offend the great ones of Indian commerce, who have punished him by keeping him out as long as they could. Many have misrepresented him in sundry quarters and on sundry occasions, and this has prevented one, who is eminently fitted for valuable constructive public work, from doing all he could; and yet the amount of good public service, which stands to the credit of Subedar, is considerable. Apart from his technical equipment as an economist and a master of financial issues, he is well-informed; and, if treated with courtesy and consideration, (that is to say, let me whisper it in your ear, if you don't rub him the wrong way) he is the easiest man to get along with. But he is sensitive. He will not allow himself to be hit without hitting back. And when Manu hits, he hits strong and severe.

In his capacity as President of the Indian Merchants' Chamber, he will, I feel sure, not only get through the usual routine in an efficient manner, but he is certain to put the work of the Chamber on a higher plane and to tone up its vigour and vivacity.

I am not unaware that while Manu has, as the phrase goes, a large body of friends and admirers and can, in fact, claim to be the leader of all the younger and livelier elements, there are a few in Bombay (and, possibly, also outside of Bombay) who would not agree with my eulogy. The critics do not question Manu's ability or talent or equipment; they have, however, come to nurse personal grievances generated in occasional tussles. This kind of personal rancour is, I regret to say, a recent infection which Manu's friends and critics alike have contracted. But I would make an appeal that the occasion demands the intervention of peace-makers, because both sides mean well and can be reasonable. Above all, I would urge on the elders that the time for commenting on Manu's presidentship is not when he has been chosen, but when he lays down the reins of his office. I have every confidence that his record of work during his tenure will be of such outstanding quality and of such compelling importance that the critics, who came to scoff, will remain to praise. Whatever Manu has done, he has done

with zest and with all his heart and strength. In the unearthing of Development Department scandals, he played a most prominent part; and he rendered yeoman public service. I was constantly with him while he was serving on the Central Banking Enquiry Committee; and, alone in that heterogenous crowd, he had to essay a Minority Report which, incidentally, is good economic literature. And the Report running to over 450 pages was dictated by Manu in three weeks! A very demon for work, a businessman who has experience of varied businesses and of varied centres, a tornado of driving force and energy, an economist of true insight, vast erudition and sound judgment, Mr. Manu Subedar's election as President of the Indian Merchants' Chamber is a striking and fruitful innovation fraught with far-reaching consequences, not only in the annals of this Chamber, but in the annals of Indian commercial bodies.

In the vacancy caused by Sir Purushottamdas Thakurdas's transfer to the Reserve Bank, Mr. Mathuradas Vissanji has been appointed as a Director of the Imperial Bank. What is seriously a loss of the Central Bank (on whose Board Mr. Mathuradas has been a member for nearly five years) is distinctly a gain of the Imperial. Mr. Vithaldas Kanji of the same firm has now joined the Directorate of the Central Bank of India, who should find in this no small consolation. It should have been a great pang to Sir Purushottamdas to leave the Imperial Bank with which he has been connected for twelve years. There is added piquancy in his joining the Reserve Bank, as it was only last May that Sir Purushottamdas endeavoured, might and main, to dissuade me from urging Sir Osborne Smith to accept the Governorship of the Reserve Bank. Not only has Sir Osborne left the Imperial Bank, but he has also taken Sir Purushottamdas with him. I know how painful the thought of leaving the Imperial Bank should have been to both of them; but both realise that public duty demands their presence in the institution which is the crown of the Indian banking system. Not less difficult should it have been for Mr. E. E. Dinshaw to severe connection with the Bank of India, of which he became Chairman only recently. His place on the Bank of India has been taken by Mr. Dinshaw Daji; and the Chairmanship has been assumed by Mr. Ambalal Sarabhai.

This week witnessed interesting election schemes; and among my business friends Mr. K. S. Ramachandra Iyer and Mr. Mulraj Karsondas came in with comfortable, majorities. Mr. Ramachandra Iyer's career illustrates that humble beginnings are no bar to heady progress. This civic honour is, I am sure, a prelude to bigger honours in wider fields. First Indian, who can claim alround efficiency and knowledge in varied sections of Insurance, he has attained expertness and status by intensive work and extensive observation. This contribution to recognition of the claims of Indian insurance offices for business available in India is most notable. And for this, if no other, he is entitled to immense credit. Mulraj is uncanny; and with no more than a week's perfunctory canvassing he came third out of twelve candidates. Somewhat puckish and always cheerful and fond of a joke, he has evidently built up great popularity even in a constituency where hard-headed businessmen reign supreme.

WORLD OF INDIAN FINANCE.

(*Continued from page 222.*)

ways and means programme for the New Year. Doubtless, he will go over the experiences of the Government securities market during this year and would also try to indicate to the country how the Government propose to realise the tangible gains from these favourable developments. It would be, indeed, an awkward predicament if the Finance Member should have to confess that when 3½ per cent. sterling paper is well over par the corresponding rupee securities should show signs of being slippery at the much lower level of Rs. 98-1. If the Government want to preserve the vitality of the giltedge market in order to hold the gains so far achieved and make possible the gains that are still indicated, it is time they considered how they can relieve the present tightness in the money market and under the tangle of embarrassments which it has caused to the Government and the markets alike.

The Rupee rate has firmed up under the pressure of tight money. Banks are obliged for immediate replacement of funds to have recourse to sales of sterling to Government at the tap rate. In view of the selling pressure from banks, Government have increased the tap rate by another 1/32d.

The closing rates are: 1s. 6 1/8d., January T.T.; 1s. 6 3/32d., February-March T.T.; 1s. 6 1/16d., April-May T.T.

Bills may be quoted: 1s. 6 7/32d., January-February; 1s. 6 3/16d., March-April; 1s. 6 5/32d., May-June.

On the weekly sterling tender day, applications for £150,000 at 1s. 6 1/8d., were received and alloted in full. Tenders for £55,350,000 at 1s. 6 1/32d., were also received and allotted approximately 1.5 per cent. £1 million will be offered on January 30.

Call money quoted about 3 per cent. and one month, two months and three months deposits 2½ per cent.

STABILISATION AGAIN IN THE AIR.

(*Continued from page 241.*)

because cheap money will be essential if either a Local Loans Conversion or a Housing Loan is decided upon.

All the indications are, therefore, that we must look for a continued strength in the gilt-edged market, particularly as, although many new industrial issues are planned, their volume is likely to be insufficient to meet the needs of investors. So that a continued flow of funds to the gilt-edged market is probable.

In general, neither the banks nor industrialists are as optimistic priviately—though for reasons of policy they may be publicly—as they were this time a year ago.

There is a growing tendency to believe that, although the present trade activity will continue for another two to three monhs, there may be a recession, possibly quite a considerable one, then.

Some members of the Stock Exchange even consider that there will be a general setback in the markets after the Budget. This, personally, I do not take so seriously as the possibility of a trade recession.

For the main factor in Stock Markets at present is the weight of funds available for investment; and there is no sign of any slackening in that respect.

CLIVE WORKS · CALCUTTA MULUND WORKS · BOMBAY

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, January 21.

A week of tense political excitement is like a breath of fresh air, after all these dull dreary days. The new Assembly is a live affair, and while formerly we had nothing more to write on than the intrigues for nomination, we have now piquant situations, incipient crises and inspiring personalities. We have lived through a tense week ; and what is more, there is no sign of relaxation. On the other hand, the interest may wax, as the days pass and the new Assembly gets into stride. It is a different thing, of course, with the Government. Journalists get good copy, only when the Government is hard pressed in the House. But what is peculiar now is that Government's embarassments should proceed from unexpected quarters.

* * *

By all tokens the Chamber of Princes is fast developing a crisis. There have always been faint shadows of its coming. And lately there are the defections in its ranks. Though the Maharaja of Patiala and the Maharaja of Bikaner are still in the Chamber, the Nawab of Rampur, an important member of the party of revolt, has left it. The Chamber is no bed of roses either for the Chancellor or its members ; and those who never joined it might congratulate themselves on their prescience and those who have left it feel thankful for the timely dawn of wisdom.

* *

The fact is that the question of Federation is causing a cleavage among the Princes, who were never too homogenous at any time. There is this ticklish question of the bigger and the smaller Princes, this intrusion of inequality among the high and mighty. It is obvious that the big and small Princes cannot alike feel at home in the new Federation or reap similar advantages from it. The bigger Princes are conscious that they can by themselves form the Federation. They know, too, that their interests are best served by joining the Federation and pulling their weight with the Federal Legislature so as to control the Government at the centre. They can see no other means of keeping the Political Department at arm's length from their internal affairs. It is different with the smaller Princes. For one thing, they have no larger ambitions ; and in most cases there is nothing more than a mere anxiety to safeguard personal, or at the most, dynastic interests ; and these ends are best secured by humouring the Political Department.

* *

The Maharaja of Patiala has generally sat on the fence ; but he has been more a critic of the Federation than its friend. His speech at the Chamber of Princes was a challenge to the Federal idea ; and its spirit and tone are well suited to the columns of the *Daily Mail* and the *Morning Post*. The Maharaja of Bikaner, on the other hand, was openly an advocate of Federation and almost challenged the smaller Princes that it would come about in spite of them.

* * *

Perhaps, Patiala is manœuvring for definition of Paramountcy, so that he and his brother Princes may be rid of the political interference as a part of the Federal bargain. The Political authorities mean to surrender no such rights ; and there is the rub !

* * *

The Legislative Assembly has commenced its session in right earnest. One motion of adjournment a day is the rate of output for the present. Yesterday it was a debate on a confidential circular issued by the Home Department. How it leaked out is a mystery ; and the newspapers concerned have added to it by their clever tactics.

The first scent the Government of India had of the leakage was when it found the circular published in *The Hindustan Times* of Delhi as emanating from its Bombay Correspondent. Probably, the Bombay Government was immediately wired to to trace the culprit. I do not know what happened to the Bombay Correspondent of this paper ; but the story goes that the copy of the *Hindustan Times* which reached Bombay had printed the circular as from its "New Delhi" source ! So the Bombay Government turned round and accused the Government of India of leakage at the very fount.

Then came the *Free Press Journal* and *The Indian Express*, which published the circular as from "A Special Correspondent" in New Delhi. Any way, Government is baffled by these journalistic tricks and does not know where to look for the real offender. Sirr Henry Craik would like to believe that nothing is wrong with his office ; but he has to square the fact that it is a Delhi paper which first published the circular.

* * *

The Home Member has threatened retribution. One does not know whether it applies to the person who "sold" it or who "stole" it or who "published" it. That is, the sword is hanging ; but Damocles is yet to find.

* * *

The adjournment motion, however, served the purpose of getting Government to confirm the authenticity of the circular. It has publicity for Gandhiji than anything the Mahatma could have done himself. It has given an importance to his Association and to his personality which Government was otherwise trying to avoid. So far as arguments go, Government's case was well put by the Home Member ; but the Assembly was not prepared to endorse the time-worn theory that the policy of the Government should be governed by considerations of "alien" rule.

* * *

But if the Government avoided defeat on this by talking the motion out it sustained a reverse on the motion relating to Mr. Sarat Chandra Bose's detention. There is no getting away from the fact that Mr. S. C. Mitra's record in the Assembly disproved the Government of India's estimate of him. The same may not turn out to be the case with Mr. Bose. But Government will have to release him sooner or later; and it would have been, perhaps, wiser to make a gesture to the Assembly and release Mr. Bose on the condition that he would keep away from Bengal till such time as Government considers necessary.

* * *

Anyway, Government lost the division and entered upon a career of anxious time in an Assembly where the Opposition has a strength of at least 60 votes.

* * *

The Congress Party has created a good impression by its discipline. But the pleasantest surprise is its debating strength in quarters where it was not so far expected. Mr. Bulabhai Desai has shown ability of a character which, if I may say with due respect to the dead, is of a higher order than that of the late Pundit Motilal Nehru. He is also easily the best speaker in this Assembly, which the late Pundit was not in his. But the Pundit was a born leader of men and Mr. Desai has not the same personality. All told, however, he should prove a worth successor to the late Swarajist leader.

* * *

His deputy Mr. Govind Ballabh Pant is an acquisition to the House. Truly, the Indepedents led by Mr. Jinnah will have to walk warily in the face of the dilemma which will be constantly placed before them by the uncompromising attitude of the Opposing sides.

(FROM OUR CORRESPONDENT)

Bombay, Thursday, January 24.

The Ahmedabad Labour dispute must again take the pride of place in this article. But on this occasion, happily, I have to record an end of the dispute. As a result of the conference between Mr. Chimanlal, G. Parekh and Mr. Gordhanbhai I Patel and Mr. Gandhi, with representatives of the Ahmedabad Labour Union, an agreement was arrived at and the terms of the agreement were ratified by Mr. S. S. Phatkar who was appointed an umpire in the wage dispute. The terms of the agreement provide that

(1) the increase in wages granted in 1930, amounting to a uniform cut 6¼ per cent., be withdrawn, subject to the condition that the reduction will be so applied as not to bring down the earnings of weavers below Rs. 41-4 for 26 working days on a 10-hour basis ;

(2) earnest efforts should be made to standardise wages without involving any cut or increase ;

(3) parties will try to evolve a scheme for automatic adjustment of wages in future ;

(4) mills, in adopting rationalisation, may run for an hour longer entailing double work for an hour on payment of five per cent. extra wages ;

(5) rationalisation be carried out under certain restrictions relating to unemployment and its effect on the health of workers ;

(6) double work in the spinning department be paid at the rate of an extra 45 per cent. and 47½ per cent., in fine and coarse counts ;

(7) a scheme will be devised for registering employees on certain lines ;

(8) a joint committee of the Millowners' Association and the Labour Union will be appointed to regulate the working under the rationalisation scheme ;

(9) disputes arising in that connection will be settled by the joint committee and finally by arbitration.

A cold wave of unprecedented severity has been passing over the northern half of India and causing serious damage to crops and cattle. Serious damages to crops are reported from Gujerat, Baroda, and other places. And there has been some damage to cotton crop also. There have been some fatalities in Mandvi and in Sind and cattle have perished in large numbers. Bombay itself, which has the reputation for an equable temperature throughout the year, experienced a record drop in the barometer. One of the worst sufferers from this cold spell was Indore whose temperature had fallen below the freezing point. Irreparable damage has been done to crops. An an unconfirmed message states that there were 60 deaths in all in Baroda.

A matter that has been causing serious anxiety amongst Bombay Millowners in the last few months and a matter to which His Excellency the Governor of the Presidency alluded in one of his speeches is the possibility of overproduction by the textile mills during 1935-36. The introduction of the 54 hour week, it is fearerd, will tend to increase the double shift system, thus leading to overproduction. It is estimated that nearly 4,500 million yards of piecegoods of Indian manufacture as well as foreign imports will be placed in the market during 1935-36. This figure does not include the production of the handloom industry. It is doubted whether the market has the capacity to absorb such a vast quantity of cotton goods. Overproduction will necessarily lead to underselling and to all the ills of unhealthy and cut-throat competition. Millowners are therefore apprehensive that unless proper steps are taken to curtail production and standardise double shifts, there will be serious consequences. The Bombay Millowners' Association have already issued a circular to all millowners in India inviting co-operation for restriction of production and inviting suggestions as to how it is to be done. Over 50 per cent. of the millowners, it is understood, are agreeable to the suggestion for restriction. But a large majority of the millowners must unite if restriction is to be successful. It is realised by the Millowners' Association that a recalcitrant and fair minority might successfully withstand the plea for restriction. At present, the market is not glutted with stocks. But the crucial month is March when the result of the double shift system will be known. Some of the millowners are banking on the hope that the rising price of staple cotton will act as an automatic check on production. Nevertheless, overproduction is such an unmixed peril that no efforts should be spared to prevent it.

It appears that the Government of Bombay's proposal about a compound motor vehicle taxation will at best receive a mixed reception. While the owners of private motor cars are elated at the prospect of a lower and simpler levy for their tyred luxury, a section of motor vehicle users have raised a stout protest against what they call an inequitable form of taxation. These are the owners of commercial vehicles and lorries and of passenger buses. And there is a great deal of logic and legitimate ground in their grievance. In a representation to the Government of Bombay, the owners of public and commercial motor vehicles as well as the Bombay Electric Supply and Tramways Company (in respect of their omnibus service) have sought to draw the attention of the Government to the unfair burden which the proposed tax will mean for them.

Their contentions briefly are :—

(1) There are no road-tolls within the municipal limits of Bombay. The public and commercial vehicles do not and cannot ply outside this zone. Hence the abolition of tolls confers no advantage on them.

(2) The taxation is not equitable as the following tables emphatically prove :—

Motor Cars.	Proposed taxes.	Total present charges.
	Rs.	Rs.
Up to 15 cwt. ...	... 70	112
,, 30 cwt. ...	... 100	132
,, 45 cwt. ...	... 130	152 (upto 40 cwt.)
Over 45 cwt. ...	... 160	224 (over 40 cwt.)

Motor Lories	Present charges.	With pneumatic tyres.	With solid tyres.	Weight of vehicle unladen.
	Rs.	Rs.	Rs.	
1. 2 tons and under ...	152	350	412 8	Up to 30 cwt.
2. 2 to 4 tons ...	204	500	625 0	50 ,,
		600	750 0	70 ,,
3. 4 to 8 tons ...	224	700	875 0	100 ,,
		800	1,000 0	Over 100 ,,

Omnibus.	Proposed taxes.	Total present charges.
	Rs.	Rs.
23 seater ...	... 635	224
32 seater ...	... 860	224

(3) The owners of public and commercial motor vehicles belong to an economically lower stratum of society than the private car owner and the taxation is beyond their capacity to bear.

(4) The effect of the taxation will be either to raise the rates of transport or for many vehicles to go out of business making place for the slow and road-crashing bullock-cart—both ruinous alternatives.

(5) The remedy proposed is to adjust the taxes on private motor cars and utilize the revenue thus furnished for the reduction of the proposed taxation upon the public and commercial vehicles and omnibuses.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT ; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

SOUTH INDIA

SOUTH KANARA'S CLAIMS FOR RELIEF

The question of resettlement in South Kanara which was dealt with in these columns last week, has now come up before the Local Legislative Council. The motion protesting against the Government's action in this regard and calling on them to cancel the enhanced rates of assessment, was taken up on an adjournment motion which was passed in the local council by 38 votes to 32. The voting can hardly reflect the state of sentiment among the members of the council against the action of the Government for, in the present state of the constitution, there are always members who are pledged to support the Government through thick and thin. But the members who spoke on the adjournment motion gave adequate expression to the feelings in the country *prima facie* and it is incredible that, while the whole world as well as India is going through a depression of agricultural crisis, having seen but the barest degree of recovery, there can be one happy spot in India where the Government could, without compunction, raise the rates of landlords. We have it on the authorities of the representatives of South Kanara and the local council, that even the existing rates of land revenue have been paid by the ryots with the greatest difficulty and that many of them have run into debt during this period, and that it is by no means true that in South Kanara the agriculturists are having a greater share of their produce than their confreres in other parts of the Presidency. This, it will be remembered, is the principal contention of the Government. Both the revenue officers and the Government are of opinion that only with an enhanced rate of settlement will South Kanara be on a par with the rest of Madras. The representatives of South Kanara, on the other hand, contend that the calculations of the revenue officers were made on a wrong basis, and that the Government have not cared to verify the figures even in the face of the obvious impossibility of there being any area in the Presidency which can admit of enhanced rates of land revenue. The Government's reply to the debate was lacking in any new points. The Government's spokesmen were content to repeat the contention made in the Government's order. It was, however, mentioned that outside Madras there were only three districts which had lower rates of assessment than South Kanara and those in Malabar, the peculiarities of the land revenue system required that Government should take a smaller portion of the gross produce of land than in other districts.The Council has apparently been long inconvenienced by these arguments and the Government have had to face the censure implied in the passage of the motion for adjournment.

The Agrarian distress of which we spoke last week has during this period been on the increase. It is learnt from the South that a deputation waited on the Collector of Tinnevelly last week and represented to him that the drought has been the most severe since the great famine of 1866 and that the North-east monsoon has recorded since November 1, a total rainfall of 1½ inches as against the average of 13 inches during the past 60 years, that out of a total *Ryotwari* area of 1,83,000 acres a lac of acres has failed completely and the rest mostly and that of dryland over a million acres remain uncultivated with the exception of small plots which are irrigated by wells. In these circumstances, the deputation urged that the Government ought to attempt to relieve the economic distress by taking immediate measures. The deputation suggested to the Collector that the conditions are similar to the conditions of "widespread calamity", which, under the standing order of the Revenue Board, would make it necessary for the Collector to grant remission without waiting for conditions from the ryots themselves. The deputation also pointed out that remission for the failure of a single crop on double crop lands, could also be made under the standing order of the Revenue Board. The Collector agreed that the conditions of "widespread calamity" within the meaning of the Board's standing order are already present and that, he has, therefore, issued suitable instructions to the Tashildars to grant such remission. Similar relief will also have to be afforded to the drylands.

The Indian cocoanut industry has at last seen a break in the clouds which have been hanging over it for the last few years. It is a long time now since Indian cocoanut began to feel the competition of the Ceylonese product, while Indian states have been hit hard by Ceylon and other cocoanut growing parts of British India. It will be remembered that recently an enquiry into the position of the Indian cocoanut industry was carried out by Dr. Patel and that his report was placed before a committee of the Economic Council of Research. Though, at the time, the committee did not come to any specific conclusions, they took due note of the fact that the position of the Indian cocoanut industry was such as to call for definite action and that it was up to the committee and those interested in agriculture, to arrive at definite proposals. The deliberations of the committee held at Delhi met to consider the suggestion of protection to the Indian cocoanut industry are, therefore, watched with the greatest care and concern. In his report Dr. Patel attempted to estimate the comparative costs of the production of cocoanut in India and Ceylon and also the incidence of any protective measures which this country might adopt on those industries which have been using imported cocoanuts as their raw material. The conclusion of Dr. Patel were somewhat disquieting inasmuch as Dr. Patel found that the cost of production in Ceylon was much lower than in India. But we have arrived at the stage in which these differential costs of production can hardly detract from the importance of affording relief to the cocoanut industry.

Only last week Travancore witnessed the meeting of the producers of cocoanut who urged that it was high time that they formed themselves into a special organisation in order that their common grievances could be ventilated and redress secured from the authorities concerned. The Chairman of that meeting pointed to the instance of the rubber growers of South India who, by virtue of their joint action, have succeeded in having their claims to the revision of the rubber quota recognised by the rubber authorities. The committee in Delhi will have to reckon with a much more important industry in the future in examining this question for, there can be no doubt that a large class are dependent on the cocoanut growing for their living. The Government of South India, like the Government of Madras, Cochin and Travancore, depend a great deal on the revenue derived from the cocoanut industry. In these circumstances, the Government will have to face the problem by keeping the cocoanut industry alive and making the production of cocoanut remunerative to the producers. It must also be considered that the differential costs of production between Ceylon and India are not as great as they seem, for, the main reason why Ceylon is able to compete with the Indian producer so successfully is that the Ceylonese producer has artificial advantages which are denied to his competitor. It is significant that the competition of Ceylonese cocoanuts increased only after the Ceylonese Government abolished recently the export duty which had formerly been levied. On the other hand, Indian cocoanut producers are often subject to the customs duties within the borders

(*Continued on page 255*).

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THREE OF THE BIG FIVE

The annual reports of the Big Five are often a truer indication of the financial condition of the country than all the re-assuring assertions from the Treasury Benches. It is gratifying, therefore, to perceive that three of the Big Five recorded on the whole a better twelvemonth in 1934.

The Midland Bank made a profit, after providing for all bad and doubtful debts, of £2,292,217 as against £2,266,846 in 1933. A special feature on the debit side was an appropriation of £250,000 made for reduction of bank premises. As against this a smaller sum, *viz.*, £270,000 was reserved for future contingencies compared with £550,000 last year. The amount carried forward was slightly higher at £866,483.

The dividend was maintained at 16 per cent. less tax with a final payment of 8 per cent.

The profits of the National Provincial at £1,643,760 show an increase of £40,336 over 1933. This is after making the usual deductions for rebate of discount on current bills and for contingencies account which includes all bad and doubtful debts. Bank premises account was credited with £100,000 against nothing last year and the carry-forward was also higher at £878,881.

The dividend was maintained at 15 per cent. less tax with a final dividend of 7½ per cent.

The Westminster Bank showed even a higher increase in profits at £1,524,880 as against £1,464,955 in 1933. The £1,524,157 which was withdrawn in 1931 to meet depreciation on the Bank's investments has been restored to the reserve. The carry-forward is slightly higher at £481,084. The dividend on the £4 shares is maintained at 18 per cent. and the maximum 12½ per cent. is paid on the £1 shares.

I shall deal later with the orations of the Chairmen since, as clever readings of the financial barometer, these orations are of great value.

Lena Goldfields

The trouble in connection with the Lena Goldfields are not yet over. It may be recalled that the Soviet Government very handsomely offered to pay the Company the sum of £3 million in instalments spread over 20 years in return for the loss of property. This offer was to have been accepted or refused within six weeks. The Company called meetings of its creditors, its note-holders and its ordinary shareholders and put the proposal before them. While all classes of claimants are agreed that the offer of the Soviet Government should be accepted, trouble has now arisen over the distribution of the money. The Company proposed that the creditors and note-holders should receive two-thirds of the proceeds and that one-third should go to the ordinary shareholders. But, in point of time, all three classes should rank *pari passu*. The creditors and the ordinary shareholders have agreed to these terms, but the note-holders have demurred. They have stated that such a procedure involves a loss of priority in their case. And they are not prepared to forego what they consider to be a legal right.

Under the circumstances, the Company was perforce driven to ask the Soviet Government for more time, and an extension of four weeks was granted. But since the note-holders are rather obdurate, it has been decided to bring the matter to the Court. The note-holders also are bent on pressing their legal right to priority in defence. If that right should be upheld in a Court, the Company will have to prepare another scheme for the disbursement of the money received from the Soviet Government. It is, therefore, doubtful whether, in spite of the Soviet Government's readiness in indemnifying the Company, the claimants will receive their dues for a long time to come.

The Lancashire Cotton Corporation

The Lancashire Cotton Corporation have published their report for the year ended October 31, 1934, and for the first time in its history has earned a trading profit of £35,764. In the previous year there was a trading loss of £62,058. After adding dividend and other income and providing for charges and fees, a net figure of £31,179 is carried to the balance sheet. One of the main items of expenditure again was the cost of maintaining totally stopped mills in an efficient condition. 25 more mills were scrapped during the year, bringing the total up to 74 mills scrapped out of 140 acquired by the Corporation.

This statement of accounts need not, however, cause undue optimism in the cotton industry. It should be remembered that the Company have not yet charged any depreciation on its stocks. In the balance sheet dater October 31, 1930, land, buildings, plants etc. were shown under assets to the value of £5,896,124. This year this asset has risen to £9,020,940. No normal depreciation on these assets have been allowed in the balance sheets so far. And if we include these invisible debits, not a penny of the small trading profit remains. Further, the mills that were scrapped are stated to have a value of something like £3 million. Under these circumstances, too much importance should not be attached to the figures in the balance sheet. The share capital of £5,069,822 must be considered as slowly approaching a vanishing point. The only consolation is that the money has been lost in a gallant experiment made difficult by endless bickerings within the cotton industry. Should the experiment fail, more drastic reforms will be necessary to put the house of Lancashire in order.

Exchequer

The Treasury has started the New Year badly and things have to change rapidly for the better to revive the hopes of another rosy budget. For the first five days of the New Year total ordinary revenue amounted to £17,355,190 and ordinary total expenditure was £21,122,880. There was thus a deficit of £3,767,690. It is difficult to compare these figures with similar figures last year because last year the first week contained six working days. However, the revenue on that occasion was £21,131,210 and the expenditure £22,882,822. The difference in revenue is said to be due to a fall in income tax receipts which was nearly 2½ million less than a year ago, totalling £6,536,000. Surtax yielded £3,330,000 and the rest of the revenue was obtained from customs and excise receipts. The only big increase over last year was shown in the motor vehicle duties. Government's borrowings from the Bank of England also increased enormously over last year's figure and stood at £11,250,000 by the end of the week. The Government's early January commitments naturally require a great deal of money, but the public, who only understand the very broadest details of financial matters, cannot be blamed for growing a little suspicious about the possibility of another 6d. off the income tax.

U. S. A.

PRESIDENT'S MESSAGE TO THE CONGRESS

One of the certain annual events in American history has come to pass. Even before Monday last the public had gained a general idea of the nature of Mr. Roosevelt's proposals and purposes. It was known that the President had decided in favour of continuing on an even larger scale the programme of public works

Air Mail Week.

expenditure with a view to provide employment and remove destitution. This should be deemed surprising in view of the promise which Mr. Roosevelt held out a year ago that the budget would be balanced by the middle of 1936 which, according to him, would bring the third year of the recovery to its end. But the public have been prepared for this from a long time ahead and for another thing neither the progress of the recovery campaign nor the programme of public works expenditure had gone according to anticipations. And it must also be remembered that even if there were any inconsistency between the earlier announcements and actions and the later, Mr. Roosevelt is hardly the man to shirk the issue. He would be prepared to confess a change of opinion and methods. But in this instance, the President pointed out in his message to the Congress that capital cannot be made of his failure. To redeem his promise to balance the budget by the third year of recovery, he pointed out that the estimates balanced if the expenditure provided for the unemployed is omitted. So long as relief works are necessary, he added, a real balancing is not feasible. The detractors of the President might try as they might to make capital of this so-called failure to achieve the balancing of the budget. But the President has sufficiently explained his position. And all fair minded people will generally admit that if private business is not in a position to absorb the unemployed and if the Government find it necessary as a consequence to continue relief expenditure, the President can hardly be held responsible for it. But whatever the justification or the lack of it, the President is determined to go ahead.

He naturally prefaced his budget proposals with his usual remarks of a general nature on the existing economic system and the evils which cried aloud for redress. He again stresses the need for a new order in which the over-privileged will be weeded out and the under-privileged will be lifted up. But he was again in a position to hold out the assurance that it was not the policy of the administration to endanger the right of private property or to destroy altogether the method of private profit which no wise man intends to destroy. All that he urged was that the administration were not able to carry on the programme of public expenditure according to the plan originally laid down ; that private property is still unable to afford the necessary employment and that therefore it would be the duty of the Government to provide the necessary employment to the unemployed. But it will be sometime still before the Government's public expenditure will have come into its stride. And till such time direct relief will have to be continued. But the President admits that the Federal Government must, and shall, be quit of the business of relief which is a narcotic, a certain destroyer of the human spirit and a violator of the traditions of America. Even in the Public Works, the payments to the unemployed, the President also assured the Congress, will be above the relief level, but below that to be obtained from private employers. This may, however, prove to be a matter for discussion in Congress. For Senator La Frolette has announced his intention to fight for higher wage-rates in the Public Works employment on the ground that private industry in many districts is paying unduly low wages.

To turn to the Budget estimates, Expenditures are estimated at $ 8,520,413,609, and receipts at $ 3,991,904,639. The deficit of $ 4,528,508,970 will be financed by using $ 739,885,188 from the Treasury's working balance and by borrowing $ 3,788,623,782.

The public debt on June 30, 1936, will amount to $ 34,239,000,000, a new record high level.

In the current fiscal year expenditure is estimated at $ 8,581,069,026, and receipts at $ 3,711,650,688.

Relief and recovery expenditures alone are placed at $ 5,259,802,852 in the current year and at $ 4,582,011,475 in the coming year, against $ 4,283,315,473 in the year ended June 30, 1934.

A factor of no little importance in the deficit is the additional $ 180,000,000 which is to be spent on national defence in the fiscal year 1936.

It is significant that all this increased expenditure does not involve new taxes. The Government, it is said, will depend on an increased tax income in order to provide for the larger debt service. There are two interesting details of the Budget proposals which it is necessary to take note of. One is the absence of any reference to foreign debts and the other is that silver seignorage receipts in 1935-36 are estimated at only 25 million dollars, whereas it is 100 million dollars in the current year. The former hardly needs any explanation and the latter is obviously an indication that the silver purchase policy will be shortly curtailed. It is yet too early to determine clearly the reactions of public opinion on the market to this sensational budget. So far as the general public is concerned, it does not miss the fact that, though Mr. Roosevelt proposed to spend very large amounts, the Reconstruction Finance Corporation has spent only about 40 per cent. of its quota and the Civil Works Administration spent only a third, so that the deficit in 1934 only amounted to 3,989,500,000 dollars as against the budget deficit of 7,309,000,000 dollars in the financial year ended June 30, 1934 and 1,997,000,000 dollars in 1933.

Expenditure must, therefore, increase to $ 814,000,000 a month, while in the first calendar half of 1934 it averaged $ 780,000,000. The public debt, now about $ 27,500,000,000, will, by the end of June, have amounted to $31,000,000,000. Next year a deficit of $ 4,528,500,000 is expected.

Though the banks might look askance at the soaring national debt, the average man remembers only too keenly that even at the record figures of 1936, the American Debt compared favourably with the debt of the European countries and that compared to the national wealth it is not such as to cause even disquiet, not to speak of alarm.

But the Banks have given a somewhat cold reception to the Budget proposals. They cannot find any technical grounds for decrying the Government. Government bonds, though they have suffered a slight setback, are still giving a sufficient yield basis to suggest that the Government credit is unhampered. Nor can the Banks. The utmost that the Banks can do is pressure of money for investment is very high. Nevertheless, it is believed that the new budget proposals mark a break in the *rapproachement* which occured during the last few months between the President and the Banks. The utmost that the Banks can do is to decline to take any interest in Government's new loans. But it is well known that the banks cannot affect the Government's policy to any appreciable extent by a threat of that kind. For, they are already, most of them, under the heel of the Government on account of the relief which they have taken from the State as a result of the crisis of 1932.

FRANCE

MORE ABOUT THE 'NEW YEAR'

The new year has begun well for France. The Flandin Government have entered the New Year with a grim determination to fight the crisis with entirely new weapons and from new angles. The adverse effects of the trade depression have been felt for quite a long period in the country and the nation has become almost tired with the old policy followed by the previous governments. The example of the U.S.A. across the Atlantic and the headway made under the ægis of the New Administration have only served to prove the futility of clinging to the old monetary principles. Nor is the English method of combating the crisis less instruc-

Air Mail Week

tive. M. Flandin has fully realised that the policy of deflation has produced an intense gloom in the country and by way of lifting this gloom he has committed himself to the policy of credit expansion. The exit of M. Moret and the entry of M. Tannery at the helm of affairs of the Bank of France and other changes in the permanent staff of the Ministry form a noteworthy event in the history of the French crisis.

The advent of this cheap money regime is to be inaugurated by raising Treasury bills to the status of rediscountability by the Bank of France. There has also been an indication of a further attempt at modernisation of the Paris money market and to make it really attractive to both demestic and foreign clients. The roots of the disorganisation of the money market that has now brought about the necessity for a change may be traced to the experiments of the inflationary period. The increasing budget deficits, the gradual swelling of the floating debt, the downward swing of the franc exchange, have strongly imbued the French financiers with the firm determination never to indulge in unnecessary currency experiments and to bring about an order. When, therefore, the currency was stabilised shortly, thereafter, the most rigid restriction was imposed upon the floating debt. The Government was expressly forbidden to issue more than 10,000 million francs in Treasury bills. This limit was found to be quite adequate in prosperous years and every thing appeared to sail smoothly. With the appearance of the depression, however, and the consequent fall in revenue, budget deficits and high expenditure, the repercussions become really serious. The Bank of France refused to discount the Treasury Bills taken up by the banks. The result was that the Government was obliged to finance its deficits by long-term borrowing. Long-term interest rates thus stood at a high level despite the abundance of idle money and high rates of interests had their restrictive influence on commerce and industry. It was at this time that the Government was forced to approach the Dutch banker for accomodation though the Bank of France had in its coffers millions of francs of gold. It is this rigidity of the money market and the high interest rates that M. Flandin wishes to relax with the co-operation of the Bank of France.

More important than the re-organization of the money market is the proposal to balance budget deficits by short-term borrowing. It was the accepted theory of M. Germain Martin, the Finance Minister, that the first step towards recovery is to make money cheap. This he endeavoured to achieve by first making the budget balance thus relieving the long-term market from fresh offerings of Rentes and Treasury bonds. But with the belief in the rival principle, that sound finance also means consolidation of the floating debt, he was forced to clear off accumulated arrears of debt which necessitated a resort to the long-term borrowing. When fresh budget deficits appeared as a result of the deflationary policy, M. Martin had to choose between further appeals to the long-term market and medium-term market (*i.e.* Rantes and Treasury Bonds) and resort to the short-term market at the sacrifice of early prejudice against floating debt. In the case of the former, the hope of seeing the Rentes rise in the market cannot be fulfilled. Flandin's government have now decided to take the latter alternative of appealing to the short-term money market in case of necessity without caring for the floating debt. There will be an increase in the debt from 10,000 million francs to 15 or 20,000 million francs and theretically a simultaneous rise in the Rentes to at least a $4\frac{1}{2}$ per cent. basis.

With the rise of the Rentes, it is expected that a large quantity of hoarded money will be attracted to the money market and through the share market into industry and trade. Much will, however, depend upon how the French Banks and French hoarders react to this new change in the official palicy. The speculative demand for Rentes is due to the anticipation that there will be cheaper short-term money and if this does not materialise people cannot be expected to disgorge their hoards. Similarly if the resources of the money market are increased by inflationary borrowing by the Treasury from the Bank of France then also the demand for Rates will tend to fall. Will there be really cheap short-term money? This will depend on the amount of money that will flow into the market as a result of the rediscounting of the Treasury bills by the Bank of France and the amount of money coming out from the hoards. There will also be the psychological tendency to discourage entry of more money with a view to prevent a fall in the money rates. The only way by which the new policy will lead to a substantial and lasting demand for the Rentes is by the French Banks lending more freely as a result of the new facilities for rediscounting their Treasury bills which they will doubtless come to hold in their securities. If the Banks take up Treasury bills as they are offered without being liberal in their loans to merchants then capital will not flow into the market and interest rates will not be reduced. Much will, therefore, depend on the way the new policy operates.

There is also the other side of the picture. While it is reasonable to expect that the Banks will be more liberal in their loan policy and there can be hopes for a cheaper money, it cannot be denied that the summary dismissal of M. Moret is apt to give rise to a suspicion with regard to the peril of the franc in the minds of the people. M. Moret is known to be a staunch advocate of deflation and gold standard and there is no certainty that the franc will continue to be at its current parity, now that the Government have acquired a new influence over the Bank of France. It may be that the growth of the floating debt may reveal the weaknes of the national finances. More important than all, will the rise in prices, if the experiments now carried on, prove to be a success and thus increase the disparity between the internal prices and world prices. And who can say that if the experiments fail, the Government may not have to choose between two alternatives—devaluation and deflation? The nation is afraid of the evil potentialities of the one and are disgusted with the inefficacy of the other.

The public are anxiously expecting a reduction in the Bank rate for loans as one of the signs of the advent of cheap money. Contrary to expectations there has been no evidence of a reduction up to the time of writing and the Bourse on Thursday reflected its disappointment in a later decline. The Rentes however, kept steady and activity remained fairly constant while there was a strong belief that the Government will not spare any pains to raise the price of Government stocks and that the Bank will sooner or later reduce its loan rate. In well-informed circles the opinion is expressed that the development of a liberal rediscounting policy will be slow but steady. It also reported that an understanding has been reached between the Bank of France and the private banks, whereby the former relaxes its activity in direct discounting in Paris and the provinces, in return for which the latter will resume the practice of rediscounting which has been reduced to negligible proportion in the past few years.

The Government have also published to-day the text of the bill for facilitating the formation of regional and national industrial ententes. These cartels have been vested with powers by Ministerial decrees to coerce recalcitrant organisations of similar trade with a view to control long production, either by complete stoppage or by short-time. The Government, in commenting on the necessity for such powers for individual trade ententes, point out that this introduction of the corporative system is intended to prepare for a transition, by State intervention, from the existing system, which is unsystematised and haphazard to a restoration of liberty. In dealing with agriculture, M. Flandin has turned the nation in the right direction, *viz.;* under the wheat and wine laws, away from the reliance on State and towards control by the play of supply, demand and other economic forces. Now it is pointed out that the same policy is being applied to industry.

Air Mail Week

The out-look on the whole for the future appears to be optimistic and considering the past experience a certain amount of guarded optimism would also appear to be justified. Unlike M. Doumergue, M. Flandin has not attempted to solve economic crisis by political weapon of constitutional reforms. He has, for the moment at least given a hope that ere long the nation will once more be on its feet in matters economical, the hope that the nation was all along in search of. It only remains of the policy to be watched to see how far the optimistic note is justified.

JAPAN.

TRENDS OF TRADE

The department of Finance has published the monthly returns of exports and imports trade of Japan and this month's summary is a departure from others of its kind in that the figures given are classified under various economic heads, such as foodstuffs, raw materials, manufactured articles, etc. The figures also form very interesting reading. That the boom in Japanese industry is now on the wane has been evident for sometime past and the Japanese have to reckon with high duties, quota restrictions, and scores of similar impediments before they can land their commodities on foreign shores. If, in the face of these obstacles, the Japanese have managed to keep the balance of trade in their favour, it is something remarkable. The ten months' consolidated figures now available show a remarkable activity of trade and progress at a time when foreign trade throughout the world tends rather to contract than to expand.

Under "foodstuffs, drink and tobacco," exports during the past ten months amounted to £139,015,000, whereas imports totalled £138,609,000. Japan has on the whole just managed to keep the imports of some of the essential commodities to within reasonable limits. Separately, however, there are discrepancies. Exports of alcoholic drinks are considerably higher than imports and imports of tobacco are greater than exports. Exports of alcoholic drinks were 7½ million yens and of tobacco ½ million yens as against imports of alcoholic drinks of 1½ million yens and tobacco 7½ millions. Whether the Japanese smoke more and drink less, the net result from the point of view of national economy is much the same. Imports of raw materials—in which term is included semi-finished materials used for further manufacturing—amounted to 1478 million yens and exports to 488 million yens. Imports of wholly manufactured articles, on the other hand, were 215 million yens, while exports totalled 1090 million yens. Japan has thus kept down the imports of manufactured products to a very low level compared to her exports, though for the ten months the total imports, raw and manufactured, come to 1693 million yens as against a total export of 1578 million yens. Though this is not an achievement for a high industrialised country like Japan, we have to take into account the invisible income of the earnings of steamer companies, which will adjust the international account of payments and receipts.

Incidently the trade figures bring to the fore some of the conflicting conventions in the matter of foreign trade. Economists have always fixed the proportion between imports of raw materials and imports of manufactures as one of the tests for judging the economic soundness of any country. This may be easy of satisfaction as the total exports and imports, from and into a country, may be adjusted, within certain limits,to be favourable ; but when the question of making the export and import trade balance with each individual State with which commercial relations are entered into, the matter is not to easy. It is quite natural that all raw materials of a particular class should come from one country ; but it is not necessary that all finished products, made out of those raw materials, should be consumed by that country ; nor is it possible to expect that country to buy an equivalent amount of manufactured commodity, when its requirements may be something different. It is this fact that makes it difficult for Japan to keep herself as an industrialised State.

For instance, Japan is now in need of long staple cotton for her industry and she must get it in the best market she can without any regard to reciprocity. To balance her raw cotton purchases, Japan might buy more cotton from Egypt, but it will only widen the gulf in the trade between Japan, and India and Japan and United States of America. Similarly, if Japan were to buy more wool from South Africa in order to balance her export trade with that country, her balance of trade with Australia would be badly left unbalanced and there will probably be nothing else to buy from the Australian market. Much the same conditions prevail in the export side of the business. Exports to Central America, for example, have increased, for the ten-month period, to 35 million yen, but imports have not even touched a million yen. Australia, Europe and North America all export to Japan much more than what they import from this country.

The only remedy would appear to lie in the negotiations with individual countries, whereby an agreement is arrived at as regards the quantity of exports and imports into that country. From this aspect, the Japanese trade parleys with other countries acquire an added importance.

Speaking of commercial agreement, the negotiation with the Netherlandies Indies appear to be unduly protracted. According to the latest report available, the view is finding expression in Government quarters that an agreement is expected to be reached within two weeks, at least on the basic principles, though not in details. The bone of contention appears to centre round what quantity of sugar Japan is agreeable to buy from the Netherlands India. Netherlands India demand an annual purchase of 500,000 tons and have now reduced it to 300,000 tons. As far as Japan is concerned the point to which she attaches importance is the ratio of quotas to be granted to Japanese merchants in Java. Whereas Japan demands an equal ratio, *i.e.*, 50 to 50 per cent. The Netherlands India's delegation is offering only 15 per cent. to Japan with 20 per cent. to others. The Foreign Office in Japan is planning to hold a joint conference of Government Officials and private traders immediately after the close of the extraordinary session of the Diet and it is expected that the final view of the Japanese Delegation will be definitely known shortly.

(*Continued from page 251*).

of the States concerned and these differences have told heavily against the Indian producers. All these suggest that to adopt protective measures in regard to Indian cocoanut would not be so uneconomic as one might think at first sight. It might be asked whether protective duties, to the extent necessary, will not interfere with the prosperity of the industries which use cocoanut as a raw material. In the first place, cocoanut represents a small part of the total outlay of such industries, secondly, it is open to the producers to pass on the incidence of the protective duty to the consumer in the shape of a higher price. At any rate, here is a clear case for a careful enquiry and early action on the results of that enquiry.

JUTE AND JUTE GOODS

JUTE

January 24, 1935.

There has not been much change in the raw jute section during the current week though the price on the whole has been better than at the close of the previous week. The highest and lowest *quotations for* March Futures were Rs. 34-4 and Rs. 33-8 per bale respectively. The turnover was fairly large. Those who had bought at the top were nervous and liquidated their holdings at the decline, while on the other hand those who were shrewd enough to sell at the rise did come out buyers at the decline. The undertone of the market, therefore, remained fully steady; the paucity of contracts remained unchanged.

Business on the whole in spot goods was small. Shippers had already booked their requirements for the month of January and were not willing to follow the advance, while sellers due to steady Futures were fully reserved and were not in a mood to discount price. Mills were practically out of the market throughout the week and quotations for losse jute were more or less nominal. The goods market was fully steady throughout the week and outside markets were steady to firm. Jute in sympathy with them was steady though by itself there was little to support it.

JUTE MANUFACTURES

January 24, 1935.

The jute goods market was very steady throughout the week. Hessians touched Rs. 9-8, a level it it did not see for several months past. Heavy goods section was fully steady, prices in all cases showing a small advance. The rise in the market was due to big speculative interest and the general support of outside markets. Mills are well inclined to sell at this level and prices at the moment do not seem to go higher at the moment.

COTTON AND COTTON GOODS

COTTON.

Calcutta, January 24.

Preliminery reports of the damage to the cotton crop by the recent cold wave are responsible for extensive short sales by option dealers and these have to be covered within a short time. One of the factors influencing the market is the probability of shippers who have made forward engagements for the supply of Broach abroad entering the market to secure supplies. It is known that Bombay and Ahmedabad are carrying minimum stocks which they may augment by purchases of Broach delivery or of ready stuff on the spot market.

Statistically, the position of the raw material is sound. Bombay stocks, stood at about 599,000 bales on January 17, compared with 807,000 bales same date last year. Exports since September, 1934, to January 17, 1935, are 459,000 bales previous same period.

Tenders at the week-end against December-January Oomras and Bengals are nil for the former and 398,000 bales for the latter.

The Bank head ginning allotment for 1935 has been placed at 10,500,000 bales of 500 lbs. each, plus a carry over of 700,000 bales, making the total quota 11,700,000 bales.

The Department of Agriculture, D. S. A., estimates world production of all cotton at 23,000,000 bales of 478 lbs. each compared with 26,100,000 bales last year.

COTTON PIECEGOODS

Calcutta, January 24.

There was a small takeover in light whites and printed styles, Indian mills, at the week end after a fairly long spell of "no business." Enquiries from moffusil consuming centres are coming in, though the volume is nothing in the way of a feature. Demand is usually good at this season and local dealers are looking forward to at least normal business in the near future. Ready market values for this reason are steady. The forward position is dull.

A corresponding inactivity prevailed in the yarn section of the local market. Prices remain steady with 22's counts standing at a premium in excess of the usual margin over 20's.

There are rumours of substantial bookings by Calcutta interests of Manchester dhooties and fancy styles.

BANK OF BARODA,

LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

BULLION

GOLD

Calcutta, January 24.

London reports, dated January 17, confirm heavy dealings in gold due to possibility of revaluation of the dollar if the American Supreme Court decides abrogation of gold clause to be illegal and there are indications of large quantities of hoarded gold being shipped from Britain to America, specially as London prices temporarily represented discount of about 170 per ounce on American parity.

Total exports from the United Kingdom during the week ending January 11, amounted to £123,000 of which a major portion was shipped to Latin America. The total imports into the United Kingdom for the same week amounted to £3,975,000 of which India contributed £1,687,000.

The Bank of Japan purchased 29,575 kilograms for 80,720,000 yen since April 26 to December 1, 1934, under the law authorising the Bank to conduct gold purchases for Government. Calculated at the legal unit of gold value, the deal represents yen 89,430,000 in value.

TEA

Calcutta, January 24.

This week's offerings for internal consumption totalled about 6,400 packages of broken and leaf grades and 8,800 packages of dust. Both broken and leaf teas were in good demand. Dusts remained firm.

At the tea sales in London on January 22, Ceylon grades of good quality received considerable attention. Common teas were ¼d. per lb. dearer, while good and time teas were sold 3d. dearer.

The following are the full particulars of Sale No. 30.

Tea with Export Rights.	1935	1934
Offered	24,070	15,990
Sold	21,158	15,282

Java

At the London auctions on January 17, 7,500 packages of Java and other teas (including Sumatra) were submitted for sale. There was a stronger market with a keen bidding for Tippy teas.

The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe	9d.	8¾d.
Common Broken Pekoe	8⅞d.	8⅞d.
Common Orange Pekoe	9½d.	9¾d.
Common B. O. Pekoe	8¾d.	9d.
Common B. P. Souchong	9¼d.	9¼d.

The following are the value prices :—

Clean Common Pekoe	9d.	9¼d.
Clean C. B. Pekoe	9¼d.	9d.
Clean C. O. Pekoe	11d.	10⅝d.
Clean C. B. O. Pekoe	9½d.	9½d.
Clean C. B. P. Souchong	9⅝d.	9¼d.

Tea Average

The following were the average prices of tea in the London market during the week :—

	Last week.	This week.
Indian Tea (Northern)	11.31d.	11.65d.
Indian Tea (Southern)	11.42d.	11.76d.
Ceylon Tea	12.97d.	13.37d.
Java Tea	10.12d.	10.06d.
Sumatra Tea	9.15d.	9.26d.

Tea Exports

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quantity of tea entered for export to United Kingdom for the first half of January, 1935.

Calcutta.—Black 7,721,755 lbs.; Green nil.

Chittagong.—Black 2,182,865 lbs.; Green nil.

Quantity entered during the corresponding period last year.

Calcutta.—Black 4,375,648 lbs.; Green nil.

Chittagong.—Black 3,460,680 lbs.; Green nil.

Total from April 1, 1934 to January 15, 1935.

Calcutta.—Black 151,014,839 lbs.; Green nil.

Chittagong.—Black 73,087,622 lbs.; Green nil. Total 224,102,461 lbs.

Total from April 1, 1933 to January 15, 1934, 215,825,637 lbs.

India

At the London auctions on January 21, 25,200 packages of Indian tea were submitted for sale.

There was a good demand, generally at firm rates.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Orange Pekoe last auction 10⅜d., to-day's auction 10⅜d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 10¾d. lb.; Common Broken Pekoe Souchong last auction 10½d., to-day's auction 10½d. lb.

The following were the value prices :—

Clean Common Pekoe last auction 10⅝d., to-day's auction 10⅝d. lb.; Clean Common Broken Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Clean Common Orange Pekoe last auction 10¾d., to-day's auction 10¾d., to-day's auction 10¾d. lb.; Clean Common Broken Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Pekoe Souchong last auction 10¾d., to-day's auction 10¾d. lb.

SUGAR

Calcutta, January 24.

There was a poor demand for Java sugar at the week-end and as importers showed no signs of liquidating their low stocks no business was transacted. Indian sugars remained steady on a basis of buying to satisfy demand.

The Bombay Java sugar fluctuated within narrow limits, closing with a slightly easier tendency. For Forward position commitments covering about 5,000 tons are reported. Arrivals of Indian sugar are steadily increasing in Bombay.

The Karachi market for Java sugar was steadier during the week under review with a slight improvement in prices. Fairly good business was done during the week for both near and forward positions. Stocks were approximately 3,600 tons as against 3,500 tons reported last week while clearances show a falling off being only 1,200 tons as against 1,500 tons last week.

The Cawnpore condition of the market remained the same as reported last week and the small buying activity at current rates continued as dealers hope that the rumoured reduction in railway freights to ports may now take place from January 15. More interest is shown for forward positions such as March, April, May than for near deliveries but most factories are not interested so far ahead.

Inspite of drastic crop restrictions, Java stocks are still well over 2,000,000 tons and recent information shows that a percentage of these stocks are in very bad condition and that the "Nivas" are most alarmed lest they may not incur a total loss on such supplies.

The situation is not improved by details of exports, as whereas during the six months May to October, 1933, Java exported some 607,562 tons, this figure for the corresponding period in 1934 fell to 591,219 tons, a loss that can only help to embarrass the position.

As regards Indian sugars dealers are still awaiting some definite announcement with regard to the rumoured reduction in railway freights, and small quantities from factories whose sugars have not yet been introduced have already been purchased with a view to despatch to Karachi should such reductions come into force.

WORLD SUGAR MARKET REPORT.

Semarang, January 8.

In the interim fairly active markets have been reported, and sales by the NIVAS have been rather important, and although a fair quantity for the Indian markets in particular has been covering earlier commitments, there was experienced a renewal in demand especially for the earlier shipments. The demand for India developed later in the month, and as there were enquiries for sugar shipped under December bill of lading, after the close of the month, it was indicative of a short position to be covered for that shipment. Up to that time reports from India were that secondhand sellers were underquoting the Java parity prices, and fair business was being done by Bombay sellers to buyers in the Kathiawar and Malabar ports. On these sellers withdrawing, more interest was again taken in Java, and several important parcels were taken up for January shipment. The available freight space in the January steamers was promptly filled and later it was heard two charters have been made for sugar from Java to India (Kathiawar ports). The Far Eastern markets shew no interest in the interval. London reported no special features but Terminal Raws gained about 2d. per cwt. all round. New York market recovered considerably after the Christmas holidays, Futures market advancing 5 points on the 27th and 28th ulto., 3 points further on the 31st and 5 points on the 5th inst., closing at a gain of around 15 points since the middle of last month. Previous to that time Cubans have been selling on a combination basis i.e. for December use the fixed price was maintained at 2.18½ but if sugars were taken simultaneously for January use the price for the latter was at around 1.75 to 1.65 cents C & F New York. However this position was changed as later sales of Cubans also for January arrival were reported at 1.82 cents. New York reports that the 1934 Quota was filled by Cubans, so that a fairly large quantity of Cuban sugars are held in New York warehouses for disposal by the Sugar Institute later.

A fairly good demand was maintained for local consumption and Straits and Island trading.

The NIVAS sales lists disclosed the following business in the interval :—

Dec.	16th	3,000 tons	BROWNS to Japanse buyers
		700 ,,	WHITES to India
		750 ,,	RROWNS for China
,,	17th abt.	3,000 ,,	WHITES telquel quality for local etc.
		1,200 ,,	BROWNS do.
,,	18/26th abt.	5,000 ,,	WHITES do.
		900 ,,	WHITES for India
		550 ,,	WHITES for China
,,	29th	16,000 ,,	WHITES for India

Sales List on 2nd January 1935 reported sales of

8,000 tons	WHITES for India
63,810 ,,	BROWNS (new assortment)
999 ,,	MOLASSES.

The New Assortment Browns business is said to have been closed some time previous and is for export mainly to European refiners. The 999 tons Molasses was also an old sale for shipment to Shanghai. Including the above items the total sales at the end of the year were : 2,940,467 tons, comprising

WHITES	1,955,961 tons.
BROWNS	896,350 ,,
SOFTS	9,570 ,,
MOLASSES ...	78,586 ,,

Since the opening of the year further sales were :—

Jan. 2nd	4,000 tons	WHITES to India West Coast
	600 ,,	WHITES to India East Coast
	1,500 ,,	WHITES telquel terms
,, 3rd	4,500 ,,	WHITES for India
,, 4th	7,200 ,,	WHITES do.
	5,200 ,,	WHITES telquel for local and export Straits.

The total to date being :—

WHITES	...	1,983,105 tons.
BROWNS	...	897,447 ,,
SOFTS	...	9,570 ,,
MOLASSES	...	78,586 ,,
TOTAL	...	2,968,708 ,,

Prices.—The sales for shipment to India were reported to be at around F. 3.—per 100 kilos for delivery at out-ports, and later up to F. 3.10 for main ports and Coast ports combined, whilst a higher price was paid for special delivery at Soerabaya. No change was made in China limits owing to the lack of interest, but for local and inter-island trading price basis was raised by 10 cents per 100 kilos.

China Markets.—As far it can be traced no important business has been possible with China in the interval, the requirements being catered for by the shipments en route, (which include sugars from France 2,000 tons and America 5,500 tons) which were all discharged at Shanghai. Sellers have continued to quote a price below the Java parity in both Hongkong and Shanghai. To make further sales to these markets renewal of interest after the Chinese new year should be awaited.

British India.—As already mentioned in this report, resellers were always underquoting the Java price by about 2d. per cwt. The only interest in evidence has been from the West ports, and this mainly from Bombay. A fair amount of speculative business appears to have taken place in the Bombay market in respect to the January to March positions.

The reports to hand indicate that considerable progress is being made in regard to supporting the home industry. From Calcutta it is advised that the Port Charges for export have been heavily reduced. The Conference steamship lines have fixed special freight rates for sugar from Calcutta to all ports in India. The negotiations for reductions in the railway rates appear to be continued, and although a heavy reduction is said to be taken as on accepted fact, nothing definite was arranged so far.

The January steamers on the berth were promptly fully booked at the opening of the year, and two charters are to lift some 11,000 tons sugar due for January/early February loading. Although there is no direct information on the matter it is learnt that a change in conditions as regards duty is anticipated in the Kathiawar ports, which accounts for the demand for sugars to arrive before the

close of February. Shipments to Goa are estimated over 1,500 tons for January, which needs explanation, as that market can absorb about 150 to 200 tons monthly only.

Business has been reported in Whites from 5-2 to 5-4½ Cif Bombay basis for January shipment. Enquiries were received for further forward shipments such as September at 5-4½ with advice that business had been done at this figure. For February to May the demand has been less in evidence and there is no advice of business being done for this position. For the East Coast only small business has been reported; sugar going forward to this market is confined to the Indian houses who ship on consignment basis.

On present Java limits and exchange Whites Cif terms are quoted :—

For Calcutta, Rangoon, Madras—5-5½ per cwt. for Jan.-March.

For Colombo, Bombay, Karachi—5-5½ per cwt. for Feb.-May.

Stocks advised on the 6th instant were :—

CALCUTTA	...	not advised

Market tendency: Steady.

GROUNDNUTS

Calcutta, January 24.

Owing to the shortage of crops the Madras market has had a firm tendency, though actual bookings have not been extensive, as holders are not inclined to compromise on the question of prices which have risen sharply, London quotations having been £15-7-6 for February shipment. Advices from London raised the price at the week end of Machined to Rs. 35-40 and Rs. 30-12 for ordinary per french candy, ex-coast godowns.

At Vizagapatam the Kernel market has been rising, the latest quotation for Machined Kernels being Rs. 11-4 per bag of 164 lbs.

Arrivals of Groundnut Kernels into Madras during the week ended January 12, 1935, amounted to 28,297 bags or 2,228 tons against 22,457 bags or 1,768 tons in the preceding week and 31,730 bags or 2,498 tons at the corresponding week of last year.

HIDES AND SKINS

Calcutta, January 24.

The Calcutta raw hide market was chiefly interested in Dharbanghas and Purneas at Rs. 4-4 to Rs. 4-8 and Kishanganj at 5-8 to Rs. 6 per lbs. Raw skins values rose by Rs. 5 to Rs. 10 per 100 pieces.

Madras tanned cow hide market continued dull, prices receding by 3 pies per lb. all round, as London buyers are holding out lower prices on the quotations of a few shippers.

The following are the latest quotations in Madras: (Per 100 pieces) Goat Bangalores Rs. 87-8 to Rs. 105 and Bezwadas Rs. 85 to Rs. 95; Sheep, Bangalores Rs. 80 to Rs. 95 and Bazwadas Rs. 77-8 to Rs. 90.

Prices of tanned buffalo hides have sharply advanced by one anna per lb. and a strong demand for this type of hides continues. Supplies are on the short side. There is a good demand for tanned buff calf skins and values are dearer by 3 pies per lb. Tanned cow half skins remain steady. Clearances are satisfactory and demand is sustained.

In the tanned skins section, a feeling of optimism prevails and a fair amount of business is passing in both goat and sheep. Prices are steadily held. Dealers expect a strong demand from Germany at the next public sales and are confident of securing very good prices for their consignments.

The following shipments of Hides and Skins were made from Madras during the week ended January 10:—To the United Kingdom: 36 bales raw goat, 45 bales tanned buffalo, 1,101 bales tanned cow, 75 bales tanned buck calf, 99 bales tanned cow calf, 439 bales tanned goat and 351 bales tanned sheep. To Belgium: 10 bales raw goat. To Italy: 4 bales tanned goat. To France: 1 bale tanned sheep.

NOTICE

TENDERS FOR SAND AND CLAY CONTRACT

1. Tenders are invited by the Tata Iron and Steel Co., Ltd., Jamshedpur, for the haulage, delivery and loading into broad gauge wagons of all Sand, Clay and Bricks required in the Works for a period of two years commencing 1st March, 1935.

2. Conditions and details of the work required are contained in a draft form of contract, copy of which together with copy of tender form can be obtained from the undersigned on application and on payment of a sum of Rupee One to the Controller of Accounts, Tata Iron and Steel Co., Ltd., Jamshedpur.

3. Sealed Tenders must be submitted on or before the 10th February, 1935, addressed to the undersigned and marked on the envelop **"Tender for Sand and Clay Contract."** They will be opened on the 11th February, 1935, at 10 a.m. Each tender must be accompanied by a deposit of Rs. 200 as earnest money (which will be returned in case the tender is not accepted). The earnest money should be sent to the Controller of Accounts, Tata Iron and Steel Co., Ltd., Jamshedpur, at the time of submission of the tender and an intimation that this has been done attached to the tender.

4. The Contractor whose tender is accepted will be required to place a substantial security deposit with the Company.

5. The successful tenderer must be in a position to commence work on the 1st March, 1935.

6. The Company does not bind itself to accept the lowest or any tender.

(Sd.) J. L. KEENAN,
General Manager,
THE TATA IRON & STEEL C., LTD.
Jamshedpur.

STATISTICAL INFORMATION

CALCUTTA'S TRADE IN DECEMBER

The overseas import trade of Calcutta in private merchandise in December 1934 received a further set-back, the value receding from Rs. 3.05 crores to Rs. 2.47 crores against Rs. 2.35 crores in December, 1933. Exports also declined from Rs. 5.94 crores to Rs. 5.40 crores against Rs. 5.32 crores in December, 1933.

IMPORTS

A comparison of the values of the principal imports with the figures for December 1933 is given below, the figures in brackets representing the increase or decrease as the case may be :—

	In lakhs of rupees.
Machinery & millwork	36 (+ 4)
Cotton goods	32 (+12)
Oils, mineral	15 (+ 7)
Iron & Steel	13 (− 4)
Electric instruments	9 (+ 3)
Chemicals & chemical preparations (excluding chemical manure & medicines)	8 (− 1)
Hardware	7 (− 2)
Provisions & Oilman's stores ...	7 (− 2)
Liquors	6 (− 1)
Motor cars	5 (No change)
Wool	4 (+ 3)
Betelnuts	3 (− 4)
Rubber	3 (No change)
Paper & pasteboard	6 (− 2)
Drugs & medicines	4 (− 2)

The total yardage of cotton piecegoods increased from 8 to 13 millions and the value advanced from Rs. 13 lakhs to Rs. 23 lakhs.

EXPORTS

The variations in the values of the principal exports as compared with the trade of December 1933 are indicated below :—

	In lakhs of rupees.
Jute manufactures	189 (+ 7)
Jute raw	122 (+24)
Tea	119 (−23)
Lac	26 (+ 5)
Hides & skins	16 (− 3)
Oilseeds (non-essential)	9 (− 7)
Pig iron	7 (+ 1)
Grain, pulse & flour	6 (− 2)
Wool manufactures	6 (+ 2)

DIRECTION OF EXPORTS

Tea and raw jute were shipped mainly to the United Kingdom, lac, skins and gunny cloth to the United States of America, hides to Germany, pig iron to Japan, linseed to Egypt, rice to Ceylon and gunny bags to New Zealand.

BRITISH TRADE IN 1934

The full Board of Trade returns for 1934 are now available and reveal considerable expansion of Britain's overseas trade during the year. Imports were of the total value of £732,330,823, representing an increase of £57,314,704 over those of 1933. The value of exports in 1934 was £396,107,544, an increase of £28,198,492 over the previous year. Re-exports at £51,263,472 were £2,182,745 higher than 1933.

Trade figures for December have also been published. Imports for the month at £63,262,544 showed a decrease as compared with that of November (1,424,803), but an increase of £104,136 over the total of the corresponding month in 1933. December exports at £34,300,382 were lower than those of the previous month by £1,824,882, but represented an increase of £3,870,818 over the total for December 1933.

GREAT RECOVERY IN CEYLON TRADE

Ceylon's trade statistics for the past year afford a graphic illustration of the remarkable trade recovery which took place during 1934.

The value of exports totalled Rs. 24,10,00,000 compared with Rs. 18,00,00,000 last year and Rs. 16,70,00,000 in 1932. The value of imports also showed a substantial increase, totalling Rs. 21,70,00,000 compared with Rs. 17,70,00,000 last year and Rs. 19,60,00,000 in 1933.

Tea, rubber and copra exports showed substantial increases both in amount and value. Coconut oil and fresh coconut exports also accorded a slight improvement, though the former showed a decline in value.

Ceylon's domestic trade with the United Kingdom increased from Rs. 9,20,00,000 in 1933 to Rs. 12,40,00,000 last year, while that with other Empire countries increased from Rs. 12,60,00,000 to Rs. 16,30,00,000.

The balance of trade in Ceylon's favour last year totalled Rs. 4,68,000, which is more than double of the previous year's figure. In 1932, there was an adverse balance of Rs. 73,00,000.

INDIA'S SEA-BORNE TRADE IN DECEMBER

The following statement on India's Foreign sea-borne trade in December, 1934, has been issued by the Department of Commercial Intelligence and Statistics.

The total imports of private merchandise in December 1934, amounted to Rs. 10,35 lakhs, and total exports, including re-exports to Rs. 12,23 lakhs.

Net exports of private treasure during the month under report were Rs. 6,02 lakhs and total visible balance of trade in merchandise and treasure was Rs. 7,96 lakhs in favour of India. Balance of remittances of funds was minus Rs. 4,89 lakhs.

FRENCH TRADE

A large decrease in France's trade is shown by the official figures for 1934.

Imports during the year amounted to 23,060,000,000 francs and exports to 17,821,000,000 francs, being decreases of 5,370,000,000 francs and 652,000,000 francs, respectively as compared with 1933.

BRITISH SHIPPING

The quarterly return of the Lloyd's Register, issued to-day, shows that the construction of British merchant shipping was 80 per cent. greater at the end of December than a year previously. British total of new shipping in hand of 596,834 tons represents 47.7 per cent. of the world's total and exceeds the aggregate output of the seven leading countries abroad. Tonnage now of new building abroad of 654,888 tons is about 52,000 tons less than the total for the preceding quarter, but is 229,000 tons above the figure of a year ago. In British yards 93,428 tons were laid down during the last three months, showing an increase of 16,517 tons over the September quarter. In the same period 109.469 tons were begun abroad.

B. E. S. T. EARNINGS

The gross earnings of the B. E. S. T. Co., Ltd., was Rs. 8,92,022 from electric supply (excluding supply to tramways) and Rs. 5,82,329 from traction for the month of December, 1934, and Rs. 1,01,67,600 and Rs. 66,19,832 respectively for the period up to the end of December, 1934.

G. I. P. RAILWAY EARNINGS

The approximate traffic returns of the G. I. P. Railway during the week ending January 12 amounted to Rs. 26,36,400, a decrease of Rs. 2,12,645 compared with the corresponding week last year. The total earnings from April 1 last, amounting to Rs. 9,36,92,884, represent a decrease of Rs. 4,88,529 compared with the corresponding period last year.

S. I. RY EARNINGS

The following are the approximate traffic earnings of the S. I. Ry., for the week ended 12th January, 1935:— South Indian (Combined), Rs. 9,25,462; Shoranur-Nilambur Railway, Rs. 2,765; Salem-Mettur Dam Railway, Rs. 2,850; Travancore Railway, Rs. 32,958; Shoranur-Cochin Railway, Rs. 30,992; Podanur-Pollachi Railway, Rs. 4,549; Tinnevelly-Tiruchendur Railway, Rs. 5,780; Pondicherry Railway, Rs. 2,412; Peralam-Karaikkal Railway, Rs. 1,945 and total Rs. 10,09,713. The figures for the corresponding week of last year were Rs. 8,92,028; Rs. 2,708; Rs. 2,728; Rs. 32,379; Rs. 29,539; Rs. 4,648; Rs. 5,828; Rs. 2,330; Rs. 1,887 and total Rs. 9,74,075 respectively.

BAR GOLD EXPORTS FROM BOMBAY

Bar gold worth Rs. 70,16,807 was exported from Bombay to Europe and America during the week ended January 19.

The s.s. "Strathnaver", which sailed from Bombay for London on Saturday afternoon, carried gold worth Rs. 2,04,905 was for New York optional London; gold worth Rs. 6,36,958 was for New York optional London Amsterdam or Paris; gold worth Rs. 6,69,499 was for London optional Amsterdam, Faris or New York; gold worth Rs. 24,98,989 was for London optional New York, Paris or Amsterdam, and the rest was for London.

The total value of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 2,15,46,51,152.

P. O. CASH CERTIFICATES

During the month of December, 1934, Rs. 65,40,000 approximately were realized by the sale of 5-year Post Office Cash Certificates, as against Rs. 93,06,000 in December, 1933 and Rs. 1,32,45,000 in December, 1932.

INDUSTRY AND RURAL ECONOMY

It is doubtful if it is widely recognised that to consolidate the progress that has so far been attained in the industrialisation of this country, and for providing for further advance, it is necessary that steps should be taken to widen the basis of consumptive demand. It is not suggested that India has effected a sufficient increase in her productive equipment, or that the expansion of productive activity is altogether satisfactory. What we mean is, that, if industrial progress is to be kept up in the future, it would be as necessary to take care of the channels of consumption as of the sources of production. It is a mistake, only too common amongst economists as well as businessmen and governments, to look at economic progress only from the standpoint of increased production. It is readily assumed that, so long as internal production is sustained either by increased production or otherwise restricting the scope of the importer in the internal market, the soundness of the national economy can be secured. Protective measures necessarily involve an increase in the cost of living. Though this does not vitiate the validity of the protectionist argument, it does involve the necessity for taking measures to conserve consumptive demand. The economic prosperity of a nation will always have to advance on the basis of an equilibrium between production and consumption, or, if foreign imports are taken into account, supply and demand. Where a nation endeavours, on the ground of the amplitude of its naturarl resources, to plan its economy on the basis of national self-sufficiency, the need for looking to consumptive demand increases with every measure that is adopted to increase internal production.

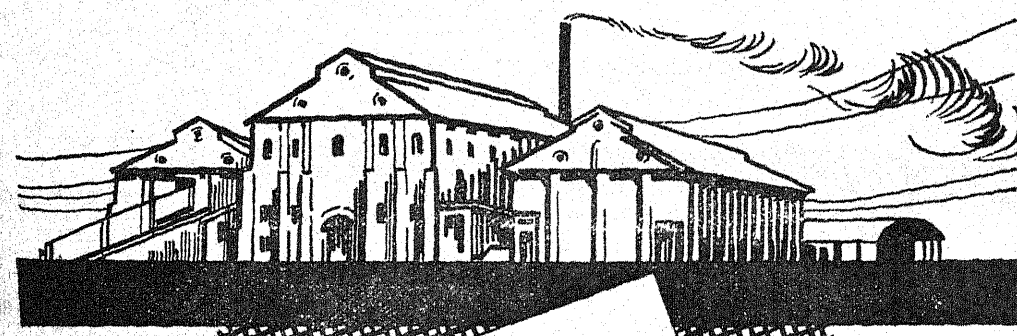
It is unfortunate that protectionism, though historically opposed to *laissez-faire* and free trade, bears traces of being infected by the systems it has opposed. Protectionists assume as easily as free traders do that, once internal production is increased by shutting out the foreign competitor more or less completely, the natural forces will bring about equilibrium. Such an assumption is not quite true even in ordinary conditions. But in India at present it is even more invalid in as much as the agricultural population, which must always be the market for the industrial products, whether indigenous or foreign, is very badly off owing to the slump in agricultural prices which has occurred in the depression and recovery from which in most cases has been, and is still, very difficult. It must also be remembered that the strength of the consuming demand from our agricultural population was never very great. The masses of cultivators in India have always been steeped in poverty, and though there has been no attempt during recent years to estimate the changes in national wealth, or in the economic conditions of the masses, it is certain that the per capita income has fallen considerably during the last few years. Such estimates as we can make of the consumption of cotton goods, sugar etc., show that there has been a falling off in the standard of living. As early as 1929 the Bengal Chamber of Commerce issued a pamphlet drawing attention to the fall in the annual consumption of such goods and drew the inference that what India needed was to strengthen the stamina of economic life amongst the masses and not merely to attempt an increase of production through the adoption of protective measures. Though the conclusion which the authors of that pamphlet drew were questionable, the facts throw a great deal of light on an important aspect of our economic life. And it is more necessary to-day than ever before that public attention and governmental policy should be directed to the toning up of economic life in the country.

It is fortunate that the recent changes in our political life are also helpful to the purpose of strengthening the economic life of the masses. For they are such as to turn the attention of Government and the Indian politicians alike to the conditions of the people. So far as the Congress is concerned, the severe check it had in the last two years to its activities, has made men like Mahatma Gandhi realise that progress is not possible in any sphere of our national life till the masses are able to take an intelligent interest. But such popular interest cannot be awakened, unless the Congress can command the allegiance and sympathy of the people by some manner of solid service. Whatever might have, in fact, impelled Gandhiji to form his Village Industries Association, there can be no doubt that he has shown a correct instinct in choosing the most proper sphere for his activities. Whether or not the Mahatma might try to enlist the support of the villages for any political plans of his own, there can be no gain saying that by the time he is in a position to enlist a rural following for his political programmes, he will have done much good to rural economy. The Government, too, are impelled by a variety of reasons to endeavour to reconstruct agriculture and rural economy generally. For one thing, there is the desire not to allow Gandhiji to outdo them in the matter of rural reconstruction. It is well-known that a circular purporting to emanate from the Government of India contains an exhortation to local officials to take greater interest in questions of rural economy. The competition between Congress and the Government in the matter

of service to rural economy, though regrettable in its suggestion of cleavage between the Government and a popular party, might well yield tangible results.

Apart from the political motive, the Government have come to a stage in which they will have to give more attention to national economy at its very base. The last one year and more has been significant for the progressive retreat from the policy of developing and expanding Indian industry through discriminating protection. It is not necessary at this stage to go into the cause of such a change. Suffice it that we have under the Ottawa and the Indo-Japanese Trade Pacts certain commitments in regard to our foreign rade. In matters concerning the staple industries, the Indian iron and steel industry has virtually ceased to be a protected one. In the cotton textile industry, we have assured Japan of a certain volume of imports in this country. There is also the Mody-Lees Pact, which has been lately strengthened by a more comprehensive Indo-British Trade Pact, and it is significant that this Pact contemplates the conclusion of more understandings between the Indian and the British industries on the lines of the Mody-Less Pact. There will also be the safeguards devised on the Joint Parliamentary Committee to protect trade between India and Great Britain. In spite of certain obvious exaggerations in the Indian press about the nature of the Indo-British Trade Pact, it is still largely true that in the last two years India has very nearly lost the fiscal autonomy which she enjoyed as a result of the convention between the Government of India and the Secretary of State. Before long we shall find ourselves altogether incapable of changing the tariffs to suit the requirements of indigenous industries.

Having signed away our fiscal autonomy the Government have need to make a bid for popularity by other means, and it is to be hoped that what we have lost in the larger sphere of foreign trade and industrial expansion we shall gain in part by a reorganisation of our rural economy. There is every reason, therefore, why Government should give their best attention to the economic life of the villages. The problem is usually thought to be very vast and it is even suggested sometimes that it will be a long time before definite results can be achieved. But we are optimistic enough to believe that if Governments' policy were sincerely directed towards the strengthening of Indian agriculture instead of merely using it as a pawn against Indian industry, much improvement could be effected before long. What is required that those departments of provincial Governments which are concerned with important aspects of economic life in rural areas should be encouraged and help to produce tangible results. Between the Department of Industries and the Department of agriculture much, indeed, can be done. We have had in Bengal the experience of what Government can do to agriculture once they impress the people with their sincerity. The problems of our staple agricultural products must be tackled without any further delay. Jute seems to have outlived its worst days. Sugarcane has the distinction of being the only agricultural commodity, whose production is definitely remunerative. But rice, groundnuts, cocoanuts and a number of others are still in doldrums. Not until the producers of these commodities regain some affluence can India hope to cover much ground. When the provincial departments which deal with agriculture, industry and co-operation get earnest about their work they will be in a position to bring pressure on Government and direct public policy along the most useful lines.



TEA IN INDIA

A MILLION WORKERS AND A MILLION ACRES

BY SIR ROBERT GRAHAM, CHAIRMAN INTERNATIONAL TEA COMMITTEE AND EMPIRE TEA-GROWERS

It is impossible in an article such as this to deal adequately with every aspect of a great industry. The tea industry of India, whose centenary is being celebrated this year, depends on the co-operation of *manifold* activities and trades in the long chain of operations that connects the distant planting of the tea-seed with the familiar functions of the homely teapot.

The history of tea-growing in India is a tale so interwoven with romance and the spirit of adventure as to invest this commercial enterprise with the glamour and dignity of a great national achievement. Tea was introduced from China into Assam in 1834 at the order of the East India Company, one of whose servants, a Captain Jenkins, was sent to bring plants from that country, until then the only tea-producing area in the world. That his mission was no mere matter of transport may be inferred from the fact that he adopted the disguise of a Chinaman. His mission was successful, but the venture was a failure ; the plants died. In that death, which might have been a tragedy, the industry was born, for its was simultaneously discovered that the tea-plant was indigenous to India and was growing wild in the very area where those pioneers had hoped, and hoped vainly, to acclimatise the plants brought from China.

From those small and speculative beginnings the industry grew. To-day there are some 5,000 tea gardens in India (about half of which are small, and many very small, holdings) covering 1,000,000 acres, and representing invested capital of not less than £75,000,000. There is no typical or standard size of tea garden: in Assam 998 gardens cover nearly 500,000 acres ; in the Punjab, on the other hand, 2,450 gardens cover barely 10,000 acres. In Bengal there are 345 gardens in 198,000 acres, while in Madras and Travancore State, the other big producing tracts, 923 gardens are spread over 147,000 acres. The other localities where tea is grown—the United Provinces, Chota Nagpur, Burma and Coorg in British India, and Tripura, Mysore and Cochin in the territory covered by native States—show a similar absence of standardisation of size. Nor is it possible to strike a final average, for, in addition to the million acres already planted with tea, existing tea gardens have in reserve almost as much virgin land available for clearance and cultivation as the area already planted.

In the year 1932-33 420,220,877 lb. of black tea were produced in India, and 3,448,412 lb. of green tea, giving an average yield per cultivated acre of approximately 420 lb. This vast production figure is the largest individual production in the world: and India's export figure for 1933—388,478,555 lb. of black tea—exceeded the export of the next greatest producing country by over 100,000,000 lb.

Some idea of the rapid growth of India's tea industry may be gathered, from a comparison of her exports at 20 year intervals over the last eighty years.

	Export in lb.
1853	235,000
1873	19,324,234
1893	126,332,475
1913	291,715,041
1933	388,478,555

Although it can be justly claimed that the initiation and the development of tea-growing in India were the achievement of the British, it is a mistake to-day to regard the tea industry of India as an exclusively British enterprise. As long ago as last century a few farseeing Indians began to interest themselves in tea cultivation. Their number has steadily risen until they now form an important section of the tea-growing community, a section whose influence is bound to increase not only by natural expansion of their activities but as a corollary of impending political changes. In the realisation by British and Indian producers that their interests and their difficulties are identical lies the real safeguard of the tea industry in India for the future. In this crisis through which tea is passing there exists to-day between Indian and British producers a bond of harmony and co-operation which inspires confidence in the ultimate solution of their common problems.

In another and wider sense the industry is an Indian industry. It gives direct employment to 1,000,000 workers, who, with their dependents, form a definite and far from negligible section of India's vast population. These labourers are recruited from the rural hinterland of India, where the normal conditions of life are a combination of dire poverty and a load of debt. For such people employment on a tea-garden means a fresh start free of indebtedness, a comfortable home, and permanent relief from that anxiety for the future which crushes the spirit of the small agriculturist throughout the length and breadth of India. For the tea-garden labourer famine, flood, unemployment and the money-lender cease to have terrors.

IN THE AUCTION-ROOM

Of great interest are the various processes whereby a tract of primeval forest becomes an orderly phalanx of trim bushes, and the young shoots plucked therefrom by the nimble fingers of the women workers are converted into Pekoes and Souchongs for the market. The business of tasting and valuing the innumerable and widely varying samples of manufactured tea has evolved a class—one might almost call them a sect—of experts possessing well-nigh uncanny powers of appreciation and discernment, some in the service of the producers, some in the stores and offices of the buyers, but principally a body of men called brokers through whose hands passes the vast bulk of the world's tea and by whose hammers it is knocked down to the highest bidder ; for tea, strangely enough, is marketed as if it belonged to the category of perishable merchandise like fruit, fish, or meat. It has always been so since the first shipment from India was auctioned in London in 1839 ; but the prices then realised, ranging from 20 s. to 30 s. a pound, justified this method of marketing. Practically all tea is blended before it is sold to the consumer ; the producer surrenders in the auction room all control over the final marketing of his produce.

The Indian tea industry has built up for itself an internal organisation which makes it easy for all but the more remote and insignificant plantations to keep in touch with each other and with a central body, the Indian Tea Association. This association, though it does not embrace all producing interests, includes in its membership such an overwhelming majority that it is in a position to speak and act for the industry

as a whole. Its policy and practice, however, are to invite and consider the views of all bodies representative of groups of non-members in connection with every matter of general interest and to enlist their co-operation; and it is hoped that in the not too distant future every local organisation in India will belong to, or be affiliated with, the Indian Tea Association.

Among the benefits derived from this solidarity in the industry may be mentioned the scientific department, with its headquarters and experimental grounds and laboratories at Tocklai, in Assam ; the Tea Districts Labour Association, which conducts the business of recruiting labour for Assam and Bengal estates ; the Indian Tea Cess Committee, which administers a fund raised under an Act of the Indian Legislature for promoting the sale and increasing the consumption of Indian tea in the world by such means as are deemed effective for these purposes. Last year the Indian tea industry itself became a member of an even wider association. The deplorable condition of the world's markets for tea brought about a rapproachment between the three big exporting countries—India, Ceylon, and the Netherlands East Indies. As a result of an agreement arrived at by representatives of these countries a scheme for the control of exports was drafted and submitted to their respective Governments for approval and legal ratification. This agreement was cemented by the formation of an international committee, whose principal function is to co-ordinate the working of the control scheme in the three countries and to advise their respective Governments of its annual requirements. The agreement further vested in the committee authority to consider, examine, and recommend ways and means whereby international co-operation may usefully be applied to the expansion of markets for tea throughout the world.

The tea industry of India cannot to-day be regarded as a separate entity. Its history may be treated in a spirit of detachment, but its fortunes are inextricably bound up with those of other tea-producing countries.

Tea has experienced in full measure the blighting effects of the regime of laissez-faire. The history of tea is not a record of steadily increasing or of steadily sustained prosperity. It is a story of ups and downs, each period of boom being invariably succeeded by years of depression. Prosperity has always seen a substantial expansion of the planted area, and the world has been ransacked in search of suitable lands for this form of cultivation.

Once planted, tea is permanently on the map ; the land cannot be used temporarily for any alternative crop, and so each increase in production remains as a fixed addition to the world's annual output. While consumption is rapidly expanding the regime of *laissez-faire* appears to be justified ; but the day of Nemesis comes, and in industries such as tea, rubber, and coffee, the only practicable devices for coping with the calamity of overproduction are regulation of output or resolute action to increase demand. Adaptation of the plant to other uses is out of the question. Tea has not yet felt the full effects of the stimulus to increased planting which the last period of prosperity gave, and it is estimated that the potential crop in 1938 from India, Ceylon, and the Netherlands East Indies will exceed by about 30 per cent. the present world consumption of these teas.

The principle of regulation has been accepted, and thanks to the sympathy and help of their respective Governments the agreement arrived at between the three big exporters of tea—India, Ceylon, and Java—has been ratified and legally implemented. This is not a final solution of the problem, and the three parties to the international agreement do not so regard it. Under the shelter afforded by Governmental regulation a programme of propaganda is being

rapidly drawn up whereby it is intended that the true solution of the problem—expansion of markets—shall be brought steadily nearer.

The situation, particularly in the United Kingdom, has been aggravated by a development of which the producers of tea have for some time been conscious without being in a position to combat it. There has been a definite deterioration in public taste which has rendered many tea-drinkers readily susceptible to the lures of other beverages. The vast tea business in this country was built up on teas possessing distinctive character, of which flavour, body, and aroma, were the principal elements. People took to tea drinking and adopted it as a standard constituent of their diet because these qualities, with the beneficial properties of the beverage appreciated equally by Confucius and Dr. Johnson, appealed to them ; and they bought their tea with discrimination. Cheapness combined with appearance has of recent years ousted the true criteria to such an extent that many tea lovers seriously believe that the tea of former days is no longer obtainable because the tea they buy is conspicuously lacking in the qualities they used to prize.

When tea is drunk merely because it is a habit and not because its inherent merits make irresistible appeal we arrive at a situation in which rival beverages begin to encroach. The producers of tea view this development with profound dismay, for it is not a fact that the sterling qualities of their product have deteriorated. Tea-drinkers with a palate for the beverage can still obtain the old satisfaction if they will voice their demand for it ; packers and distributors will readily respond to such a demand.

A CAMPAIGN

So deeply conscious have the producers become of the dangers inherent in a general deterioration of public taste in the matter of tea quality that a campaign is being launched with the object of informing tea-drinkers that the old qualities are still available, and of convincing them that a saving in initial cost does not represent a proportionate advantage in the price of a cup of tea or in the pleasure and benefit of drinking it. In pursuit of this common object the Ceylon Tea Propaganda Board has allied itself with the Indian Tea Cess Committee, and the campaign will be a joint undertaking carried out by the body which for the present is styled "The Empire Tea Growers."

Thirty years ago that wise and far-seeing statesman Lord Curzon emphasised the importance of the potential market in India and commended it to the attention of the tea industry. Since the passing into law of the Indian Tea Cess Act of 1903 propaganda in India has been steadily carried on. In 1913 the internal consumption of tea in India was estimated to be 15,000,000 lb. ; in 1933 the estimate was 63,000,000 lb. The Indian Tea Cess Committe has announced its intention of doing all in its power to develop this market which lies at its door, and a campaign has been inaugurated on intensive lines which will be expanded and developed until the point of maximum efficiency has been attained. The steady, if not rapid, expansion of tea-drinking in India in the past justifies a feeling of optimism about the results of these redoubled efforts. (*Reproduced from the* "Manchester Guardian," *Tea Supplement.*)

SUGAR MILL STRUCTURES AND CYCLONES

In view of the frequency of cyclones in most of the sugar manufacturing areas in India, the following points in regard to sugar mill construction, which have been stressed by a specialist in the International Sugar Journal are of considerable importance It is necessary in this view to consider each part of the mill structure from the standpoint of resistance to the pressure of wind blowing at a high velocity.

CHIMNEYS

Chimneys, due to their height and relatively small base, offer the greatest danger. It must be added that the higher areas of the wind, furtherest from the ground, which have encountered no obstacles, conserve all their force, and for this reason some authors consider the force of the wind at lower levels as less than that higher up. For sugar mill buildings located in the open fields, it is necessary to consider the force of the wind as uniform and make no deductions for the lower levels. There are four kinds of chimneys (1) brick, (2) reinforce concrete, (3) self-supporting steel stacks, and (4) sheet-iron or steel stacks, with guys.

Brick Chimneys:—The only resistance offered the wind, by a brick chimney, is that of its own weight. It is not advisable to attribute to the mortar which unites the bricks any adhesive power capable of resisting tensile stress.

Reinforced Concrete Chimneys:—It is evident that a concrete chimeny can be of much less weight than a brick chimney of the same interior dimensions, and that the steel rods of the reinforcing allow of considerable tensile stress, which shows that in general the concrete chimney offers much more resistance to cyclones as has been amply proven by experience.

INSURANCE OF SUGAR FACTORIES

THE LONDON & LANCASHIRE INSURANCE Co. Ltd.

Incorporated in England.

CONSULT THE

"LONDON AND LANCASHIRE"

REGARDING FIRE RATES FOR BUILDINGS, MACHINERY AND STOCKS.

Full particulars on application to:—

BRANCH OFFICE: 2, FAIRLIE PLACE, CALCUTTA

LIBERAL PROMPT SECURE

Self-Supporting Steel Stacks:—The resistance of these stacks depends on their anchorage, as the moment of weight only is opposed to the tipping moment of the wind, inasmuch as the relatively great weight of the foundation is the decisive factor in the resistance. The round sections should be of adequate thickness, ¼in. for the lower plates, 7/16 in. for the centre plates and 3/8 in. for the upper plates. The rivets should be carefully calculated and the stack should be reinforced with rings of angle-iron, rivetted inside and outside, to prevent collapsing, thereby maintaining the section modulus intact. Lining the stack with fire-brick, with close joints, increases the resistance against collapse of the round section.

Roofing Material:—Corrugated sheets are used almost exclusively, either of galvanized iron, or cement fibre composition. The first have the advantage of not breaking and the second can only be recommended when the thickest and most resistant grade is used. The thickness of the galvanized iron should be at least No. 22 BWG for the roofs and No. 24 BWG for the sides. The life of the galvanized iron is approximately 15 years, while the cement fibre composition is almost everlasting.

It should be mentioned that the roofing is more efficient when it is well fastened to the purlines. During a cyclone the force of the wind may be exerted on the under side of the sheets, it having entered the building through the windows or other openings.

Gable Ends and Sides:—The cyclone not only strikes the roof, but also the ends and sides of the building.

It is necessary to provide a horizontal bridge, or tie. A side reinforcement which can maintain the columns vertical and parallel, should also be provided. For winds in a diagonal direction the members offer resistance against the twisting of the structure. The lower chords of the trusses should be united by a combination of channels to resist the compression, the same as the stringers. Diagonals tie-rods turn-buckles should be installed between the upper chords of the trusses. With this reinforcement the building will be secured against collapse.

Elevated Water Tanks:—For water pressure, elevated tanks are used which are exposed to the action of the storm.

It is evident that, the more water it contains, the greater is the weight ; and for this reason the tank should be kept full of water during the cyclone season. The hydrostatic pressure on the inside of the tank also offers resistance against collapsing, inasmuch as the reinforcing rim is usually a light angle-iron which, by itself, does not offer sufficient resistance to the force of the wind against the side, or projection, of the empty tank. The roof should be strongly built with trusses well fastened to the tank, so that it will not be blown off, as has happened in a number of cases.

MOLASSES STORAGE TANKS

The same may be said of the molasses tanks, which are not so high as the water pressure tanks, regarding the equation of the tipping moment. The large exposure of the side, or projection, of the tank, is sufficient to cause its being tipped over by the wind. It is not always possible to have the tank full of molasses at cyclone time, and it is also difficult to fill it with water due to the large capacity of the tank and the scarcity of water and cost of pumping, etc. The corrosive action of the water mixed with a certain percentage of molasses is also a factor to anchor these tanks well and reinforce the sides and the upper rim.

CONDENSERS AND TOWERS

As a general rule, it can be said that condensers, because of their great weight, offer little danger. Condenser towers generally are not covered with siding, which means less surface exposed to the force of the wind. Nevertheless, care should be taken to see that the large pipes do not give rise to eccentric loads on the tower framing, nor that this serves as a support for roofs, etc., but that it carries only a centred load. taking this into consideration, and also providing adequate diagonal bracing for each length, there is no reason to fear that these towers will be blown down by cyclones.

CANE HOISTS

This equipment is usually blown down by cyclones. As it is mostly of wood framing which does not fulfill the requirements of storm-resisting construction, it is not surprising that it goes down before the wind. It is to be recommended that these hoists be built of structural steel, well calculated and designed to resist the maximum force of the wind, and above all, be self-supporting.

THE I. L. O. IN 1934.

REVIEW OF WORK ACCOMPLISHED

Steady Progress towards Universality.

The year 1934 was an important one in the history of the International Labour Organisation.

Entry of United States and Russia.—On 20th August, 1934, the United States officially accepted membership of the Organisation, and a month later the U. S. S. R. also acquired membership by virtue of its entry into the League of Nations. Afghanistan and Ecuador became members in September of the year. Thus, 62 nations now belong to the International Labour Organisation, which has therefore reached a decisive stage on its way to becoming definitely a universal institution.

Enlargement of Governing Body.—Its universal character has moreover been emphasised within the structure of the Organisation itself, as a result of the coming into force of the amendment of the Treaty of Peace—the application of which has remained in suspense for twelve years—allowing the election, for the first time, of an enlarged Governing Body. This new form assures a closer collaboration of the Governments, employers and workers of extra-European countries.

New Life Infused.—These developments will afford the Organisation greater possibilities of success in connection with the problems raised by the depression throughout the world, which, owing to their great and varying scope, can only be dealt with properly by an institution of world-wide extent. It is evident that the effective participation of the United States will, on the one hand, provide the Organisation with very valuable information on the great effort of economic reconstruction which is being carried on by President Roosevelt's Administration, and which interests all other countries, and, on the other hand, will bring new life and viewpoints into the international discussion of the steps to be taken to combat stagnation of economic life, and consequent unemployment.

Reduction of Hours of Work.—This will be particularly noticeable in dealing with the problem of hours of work, one of the chief tasks of the Organisation, and one in connection with which the United States has acquired most valuable first-hand experience. At its 1934 Session, the International Labour Conference took no definite decision on the question, but it was again placed on the agenda of the 1935 Session in a form which is somewhat analogous to the American system of codes, since it aims at the adoption of a Convention providing for the reduction of hours of work throughout the sphere of economic activity, but allowing the application of the reform industry by industry, with the adaptations appropriate to each case. At its 1934 Session, moreover, the International Labour Conference achieved definite progress in this field by adopting a Convention on the reduction of hours of work in automatic sheet glass works—to the same effect as the one it adopted in 1931, for the limitation of hours of work in coal mines. It is hoped to secure the partial revision of this latter Convention in order to facilitate its ratification.

Conventions adopted in 1934.—In another field, also equally allied to the social consequences of the depression, the Conference this year obtained an important success by adopting an international Convention on unemployment insurance and assistance for the unemployed. All the States which ratify the Convention are bound to set up a system which will ensure that persons involuntarily unemployed, shall have either a benefit (compulsory or voluntary insurance), an allowance (assistance), or a combination of the two. At the same Session, the Conference extended the scope of the 1925 Convention on compensation for occupational diseases so as to include additional processes, one of the diseases so added being silicosis; it also adopted a partial revision of the 1919 Convention prohibiting the night work of women which left the general lines of the Convention untouched, but made certain minor changes with a view to facilitating ratification by a large number of countries. The total number of Conventions adopted by this year's Conference was therefore four; it also accomplished the first stage in the preparation of two Draft Conventions to be submitted to the 1935 session for adoption. One of these concerns the conservation of pension rights of migrant workers, and is a question of particular interest for countries having a very complete system of social legislation. The other, aiming at the prohibition of the employment of women in underground work in mines, is, on the contrary, mainly important for countries which are yet only in the first stages of industrial development. The contrast presented by these two problems is characteristic of the wide field of action of the Organisation.

Agenda for 1935 Conference: Native Labour.—No less significant is the choice of the other questions which the Governing Body of the I. L. O. has decided to bring to the attention of the International Labour Conference for the first time in 1935; the agenda of the Session comprises, besides the problems of the unemployment of young persons and holidays with pay, the recruiting of native labour in colonies and in other territories where labour conditions are similar. The I. L. O. has drawn up carefully documented reports on these various problems to serve as a basis of discussion by the Conference. It has also made preliminary studies of general questions suitable to be brought before the Conference at a later date, such as safety of workers in the building industry, the employment of children in the cinematograph industry, the recruiting and placing of migrant workers, collective agreements, etc.

Studies and Reports: Public Works.—Also, entirely apart from any proposal for international regulations, the I. L. O. has investigated in the light of the experience already gained in many countries, the necessary lines of a rational public works policy, aimed at ameliorating unemployment and creating new economic activity. In this connection it may be recalled that this year's session of the conference adopted a resolution in favour of better co-operation in this field between States. The principal studies which the I. L. O. published during the year dealt with the organisation of "Social Services" in 24 countries, "Industrial Hygiene" (an account of the basic principles of general regulations for industrial health), "International Comparisons of Cost of Living," "International Standards of Labour Statistics," "Hours of Work in Postal, Telephone and Telegraphic Undertakings," etc. From the scientific standpoint, the I. L. O. continued to follow with the greatest attention the efforts at social and economic reconstruction in the United States and it published a new and particularly important study on this subject.

Extra-European Countries: Special Report on Japan.—Further, the report of one of the Assistant Directors of the Office, Mr. Fernand Maurette, on "Social Aspects of Industrial Development in Japan," aroused the greatest interest in all industrial, commercial and labour circles, the more so, as it was a first contribution towards the solution of the questions

of competition and standards of living which have arisen almost everywhere owing to the rapid industrial development of certain countries that, until recently, had remained outside the main currents of international competition. This question was frequently raised at the 1934 session of the International Labour Conference, and at meetings of the Governing Body, by delegates of all groups and from all parts of the world. The great progress achieved in 1934 by international social legislation in extra-European countries cannot be too greatly emphasised in this connection. Of 57 ratifications of Conventions which were registered during the year, 44 were by countries of Latin America and 3 by China.

Director's Missions.—If to these developments are added the visits of the Director of the International Labour Office, Mr. Harold Butler, in the spring to Rumania, Bulgaria and Yugoslavia and in the autumn to the United States and Mexico, the missions of Mr. Maurette to Japan and those made by various officials of the Office to South America, it will be found that a steady tendency towards universality stands out definitely as the leading feature of the activity of the I. L. O. in 1934.

OIL FROM COAL

Germany in her striving for economic self-sufficiency has formed a Company under the control of a Ministry with the object of producing petrol and lubricants by the hydrogenation of liquite (brown coal). Germany's output of mineral oil does not exceed 400,000 tons annually ; and the bigger part of the country's consumption of petrol, lubricating and gas oil is imported. The newly formed Company will, it is reported, set up a huge hydrogenation plant, the gradual expansion of which will enable Germany in a few year's time to cover her motor fuel supplies from domestic sources. According to a recent Decree, the Minister of Economy is authorised to link lignite producers together in a cartel for the purpose of financing the Company. When additional capital is required the Ministry will incorporate other producers into the cartel and the amount of their respective financial contributions will be fixed by Government. Altogether, the estimated capital expenditure will be about Rm. 200,250,000,000. The Board of the Company is not elected by share holders, but appointed by Government, thus eliminating the factor of majority decisions.

Recent developments both in Great Britain and Germany have stimulated the expansion of oil production from coal. Experiments on a large scale have been carried out which presage a new industry. Germany's coal industry differs from Britain's in that it is not based solely on the production of black coal, but to a large extent on that of the lignite. As early as the forties of last century attempts were made in Saxony to nobilitate lignite through low temperature carbonisation. In this way a kind of illuminating oil was produced; but with the introduction of cheap oils for lighting, as a result of the large scale production of petroleum in the United States, the economic basis of the low temperature carbonisation of brown coal in Germany was underlined.

A trade correspondent to the *Financial News* states that the continuous perfection, however, of methods of carbonisation, on the one hand, and the progress made in the use of oil for fuel and of the heavy oil engine, on the other, have opened up new possibilities for German lignite carbonisation. To-day, it is possible to extract from 100,000 tons of lignite tar, which is produced from between 1 to 1.5 million tons of coal according to quality, 38,000 tons of motor spirit, 10,000 tons of Diesel oil, 8,000 tons of fuel oil, and 2,000 tons of lubricating oil. In practice, the German brown coal carbonisers have placed the production of heavy oils in the forefront of their programme and concentrated on the output of gas and fuel oil.

In the second method of producing oil out of coal, by high pressure hydrogenation, Germany was also very early in the field. In 1910 the famous German chemist, Dr. Bergius, began the work which he completed in 1927, and which was then translated into practice by the German Chemical Trust at their Leuna works (situated south of Halle, Central Germany). In these Leuna works brown coal in its crude state as well as tar obtained by carbonisation is hydrogenated. The final product is mainly motor spirit. The head of the Institute for Coal Research in Muelheim (Ruhr), Professor Franz Fischer, has recently concluded experiments with a new process, which, in contrast to low temperature carbonisation and high pressure hydrogenation, is based not on coal but on coke.

The German Government is making a strong drive for an increase of oil production from coal. Recent developments have shown that in spite of increased borings there is no prospect of a notable increase in the German output of petroleum, which for three years has remained stable at about 230,000 tons. Of the total German requirements of fuel, amounting last year to 1.9 million tons, only 26.8 per cent. were produced at home. As regards motor spirit, the percentage was even less—about 20 per cent. During the first nine months of this year imports of benzine have been just 15 per cent. and of gas oil 40 per cent. higher than last year.

In Great Britain, which also stands on the threshold of a new phase in the production of oil from coal, conditions are very different. The British industry is of much more recent growth than the German. In 1927 only one commercial low-temperature carbonisation plant was in operation. By 1933 there were nine in existence. Now, in almost all the coal districts of the country, there are new plants under construction or in contemplation. The hydrogenation of black coal, which has not as yet been exploited to any great extent, will also shortly be introduced on a considerable scale. The hydrogenation plant of Imperial Chemicals in Billingham-on-Tees, with a capacity of 150,000 tons, will be opened early next year. If the experiment in Billingham proves successful, Imperial Chemical Industries, Ltd., is convicted, as Sir Harry McGowan announced in his recent presidential address to the Institute of Fuel Research, also the hydrogenation will be developed on a larger scale. Already a number of plans with this end in view are known to be under consideration.

The British production of oil from coal will no doubt lag somewhat behind the forced German tempo of advance. But the 1d. tax per gallon on imported heavy oils and 4d. preference guarantee of the British Hydrocarbon Oils Production Bill ensure sufficient profits to the manufacturers of oil to make possible a sound and steady progress.

Thus, at the moment, the production of oil from coal can look forward to a steady advance, the pace of which may be uneconomically forced, but which nevertheless offers an opportunity of making important technical experience in large scale production. Therewith, conditions are such that it should be possible to discover ways and means of gradually extending also the commercial basis of this very young industry. In this way a sound foundation may be laid for the future of this great achievement of modern chemistry.

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A Practical Guide to Current Problems.

The Joint authors of *Indian Finance Year-Book, 1934*, were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented depression has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book, 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

The Managing Editor,

DUTCH EAST INDIES-RUBBER.

PROSPECTS FOR 1935

A reasoned anticipation of the position of the rubber industry has encouraging elements, of which a recovery in the price of the raw material is the most re-assuring. Consumption has been good for the time and there is a probability of its reaching a high level during the year. With falling shipments and rising consumption, stocks should be reduced at a satisfactory rate. Another hopeful feature is that Dutch interests in the East Indies appear to be securing a very close control over their native producers. It may be some time before these factors exert a beneficial influence on the commodity price ; but that they will do so is the opinion of the industry, which attaches considerable importance to the native cultivation in the Dutch East Indies and to the consumption in the United States. It is reported that the Dutch East Indian Government have on December 26 reduced the basic duty on exports of native rubber from 20 cents a kilgramme to 16 cents.

In the early months of restriction native rubber shipments greatly exceeded the quota allotted, necessitating an advance in the export rate to a figure which substantially reduced the return to native growers, who have demanded a lower restriction rate for 1935 than the 30 per cent. rate contemplated by British interests. The rate was actually fixed at 25 per cent. ; but the Dutch would have preferred the still lower figure of 20 per cent., because of a doubt as to whether the Dutch, with a rate of 25 per cent., would be able to prevent a recurring of the difficulties experienced during the first months of the regulation scheme.

The recently announced reduction in the native export duty indicates that those fears are unfounded and it is safe to conclude that so long as the price does not rise to 8d. or 9d. a pound, the Dutch will have no difficulty in keeping native shipments within the 1935 quota, which is larger than last year's. The automatic increase in the exportable amount of native rubber in this year will probably bring about another decrease in the export tax. There has been so much anxiety about the native situation that these latest blends are distinctly encouraging, inducing a more confident commodity market.

On the American market a rising demand is statistically visible. American consumption of crude rubber in November last amounted to 34,842 tons compared to 31,347 tons in the month previous, though it was not thought that the November figure would exceed the October figures because normally in the United States, as in most other countries, absorption of rubber is at the lowest point in November and December. The variation was a remarkable index to prospects in the coming months. Equally remarkable were the comparative figures of consumption in the States during 1933 and 1934, which are respectively, on a conservative estimation 450,000 tons and 419,335 tons. Not only do these figures tell their own story, but a very high level of demand (near about 500,000 tons) is anticipated in 1935, on the present fairly good level. On the whole the beginning of 1935 indicates, on a review of all the circumstances, many favourable factors in the industry. It is not suggested that the commodity price will soar to dizzy heights: only that a break from low levels is maturing.

TIN INDUSTRY

World Position

The November Bulletin of the International Tin Research and Development Council, just issued by The Hague Statistical Office, gives the world's apparent consumption of tin for the twelve months ended September, 1934, as 118,700 tons, as compared with 121,100 tons in the preceding twelve months. The amount of tin used in manufacture is given as 134,500 tons for the year ended September, 1934, an increase of 6.9 per cent. over the quantity used in the previous year.

The consumption statistics for the two periods are tabulated below:—

	Year ended Sept., 1934	1933	% increase, over 1933
U. S. A.	46,786	54,699	−14.5
United Kingdom ...	20,746	18,894	+9.8
Germany ...	9,840	9,947	−10.7
France	9,322	9,886	−5.7
U. S. S. R.	4,913	4,209	+16.7
Other countries ...	25,093	23,465	+6.9
"Apparent" world consumption	118,700	121,100	−2.0
Estimated depletion of consummers' stocks ...	15,800	4,700	...
World consumption in manufacture ...	134,500	125,800	+6.9

Consumption

The present falling tendency of world tin consumption, although partly seasonal, is due to the downward trend in the U. S. A., Germany, and France. A marked upward tendency is shown in the case of Japan, and in most other countries the trend is upwards or approximately level.

World consumption for the month of September, 1934, is given as 8,997 tons, as compared with 10,283 tons in August, 1934, and with 11,913 tons in September, 1933.

Consumption in the U. S. A. was 3,928 tons in September, 1934, against 5,536 tons in September, 1933 ; in the United Kingdom 1,278 tons, against 1,761 tons ; and in other countries 3,791 tons, against 2,986 tons.

The world output of automobiles showed an increase of over 38 per cent. at 3,605,000 vehicles in the year ended September, 1934, as compared with 2,60,000 vehicles in the previous twelve months, while tinplate production increased by 6.8 per cent. to 3,039,000 tons, against 2,846,000 tons. Following is the world consumption by industries:—

	Year ended September. 1934 tons	1933 tons
Tin used in automobiles ...	12,310	9,380
Tin used in tinplate ...	49,000	46,800
Tin used in other industries ...	73,190	69,620
Total used in industry ...	134,500	125,800

Exports

The International Tin Committee's figures of tin exports in October are as follows:—

	Export from Jan. to June	July	Aug.	Sept.	Oct.
N. E. I. ...	9,093	1,667	1,629	1,705	1,149
Nigeria ...	2,288	450	727	309	428
Bolivia ...	9,466	1,703	1,891	1,910	1,919
Malaya ...	16,675	3,194	3,276	3,117	2,155
Siam ...	4,536	1,170	1,091	923	866

The monthly export permissible from January 1, 1934, to March 31, 1934, and from October 1 last to the end of this year, for N. E. I. is 1,364, for Nigeria 373, Bolivia 1,556, Malaya 2,552 and Siam 816; the amount in the period from April 1 to September 30 was, for the N. E. I. 1,667, Nigeria 464, Bolivia 1,943, Malaya 3,152 and Siam 816.

MANUFACTURED WEATHER

Technically, air-conditioning or manufactured weather is the science of mechanically controlling the temperature, humidity, purity and movements of the air within buildings and enclosed spaces— that is, controlling the effects of such air on individuals and materials exposed to it. An informing article in the *Financial News* states that its importance in industry, in places of entertainment and in the home is well-established in Europe and the United States. Air-conditioning experiments were first carried out in the United States in 1911, when Mr. Willis Carrier provided the basic data on which air-conditioning plant is designed. Those experiments proved that atmospheric conditions produced in certain New England textile mills were superior to those in Lancashire mills. From cotton to fresh industrial fields was a quick development and air-conditioning in the pre-war year was responsible for great operating efficiency in the chocolate, ceramic, banking, confectionary and artificial silk industries.

Many of the special industrial problems of the war were solved by the use of air-conditioning plant. In aeroplane depots, for instance, it was found that structural defects were developing from the irregular

Mohta House, Strand Road.

behaviour of wooden parts assembled from a variety of regions and climates. Air-conditioning brought about the necessary uniformity. The accuracy of time fuses was finally ensured by a pre-determined temperature and humidity, removing the fatal risk of wrong timing.

In the industrial world, air-conditioning has brought atmospheric conditions under human control. Roughly speaking, it may be said that where products undergoing manufacturing processes are affected by atmospheric temperature and humidity, air-conditioning can eliminate disadvantages of varying natural conditions, maintaining instead static ideal conditions. Air-conditioning service covers indoor conditions, processes involving hygroscopic materials and drying of non-hygroscopic materials. It is estimated that two hundred manufactured products are better turned out with the aid of manufactured weather ; and of these rayon is easily the first. In the printing business, some of the papers used are extremely sensitive to atmospheric variations which spoil fine colour process work. Air-conditioning has removed this disability, as it has the disabilities of impure atmosphere in large bakeries. In factories air control is important, not only for insuring perfect conditions for carrying out certain processes, but also for maintaining the productive capacity of workers. According to the British Industrial Fatigue Board output in the summer months fluctuates by as much as 30 per cent. below normal. Factory costs can be reduced by controlling air at the level of maximum operating efficiency.

For domestic and entertainment purposes air-conditioning is regarded as indispensable in the West where amenities of life are of a high standard. Public buildings, Council Chambers, cinemas, theatres, hotels and hospitals all manufacture their weather according to specifications. In large broadcasting establishments artificial means of ventilation are essential, and air-conditioning is necessary for maintaining specific conditions of temperature and humidity and preventing the transmission of sound from one studio to another.

The growth of national industries throughout the world finds in air-conditioning an invaluable element of success. A suitable atmosphere for each industry susceptible to weather is a practical proposition, eliminating natural adverse climatic conditions. In the textile industry alone, which is of vital importance to India, air-conditioning is bound to enter largely into productive capacity in the future. Several Japanese cotton and artificial silk mills have installed air-conditioning plant. Indian mills have not, had recourse to air-conditioning as part of their industrial equipment. In this country where industrial fatigue is climatically inevitable, the need for air-conditioning is obvious.

MADRAS INDUSTRIES

REVIEW OF 1933—34

The Government of Madras (Development Department), reviewing the Administration report for 1933-34 of the Industries Department, observe:—

In spite of the continued and general economic depression, the number of new industrial undertakings registered during the year was 167—the highest number recorded since the Indian Companies Act came into force—as against 152 in 1932-33. Of these, three were cotton mills, five ginning factories, four sugar factories, one steel rolling mill and three mining companies. The supply of electric energy from Pykara accounts probably for the floatation of the three cotton mills and five ginning factories with their head offices at Coimbatore. The industrial possibilities of the area adjacent to Mettur are under consideration. There was an increase in the output of manganese and barytes while that of magnesite and mica showed a reduction. Exports of manganese and mica rose, the value of exports of the former to the United Kingdom being more than double that of he previous year.

As a result of preferences granted by the Ottawa Trade Agreement, trade with the United Kingdom improved during the year, the total export to that country from this Presidency having increased by Rs. 100 lakhs. The products that chiefly contributed to the increase in the export trade were cow-hides, raw cotton, sheep-skin, tobacco, coir manufactured, castor-seed, groundnuts and rubber.

In order to take full advantage of the high tariff on sugar imports, the department assists the development of the sugar industry by demonstration of the methods of manufacture of white sugar by centrifugals, by getting trained sugar technologists to staff sugar factories, by the award of scholarships, by investigating schemes for starting sugar factories and by assisting in the selection, purchase and erection of machinery.

The Board of industries recommended to Government the grant of loans to three industrialists under the State-Aid to Industries Act. Two of them were rejected by Government, mainly for want of adequate security for the loan, and the third is under the consideration of the Government. The proposals to amend the State-Aid to Industries Act in order to supply electrical energy on favourable terms and to introduce a hire-purchase system for acquiring plant etc., are under the consideration of Government.

The question of finding foreign markets for the products of Madras cottage industries has been under consideration for some time and orders were issued during the year sanctioning an annual subsidy of Rs. 3,000 to the Victoria Technical Institute for three years, to enable them to appoint an agent in London for the sale of the products of Madras cottage industries. The Government of India have promised grants for schemes to market handloom products and to provide disease-free seeds to sericulturists. It is expected that the schemes will be in working order in 1935-36.

The Kerala Soap Institute, Calicut, continued to work at a profit in spite of various adverse circumstances, economic depression and competition, both internal and foreign.

The printing section in the Government School of Technology was reorganised and three different courses were introduced, one for compositors and proof-readers, one for machine-minders and the third a diploma course intended for those who have completed the first two courses. The strength of the school on 31st March, 1934, was 927, a sign of growing popularity of the courses provided in the school.

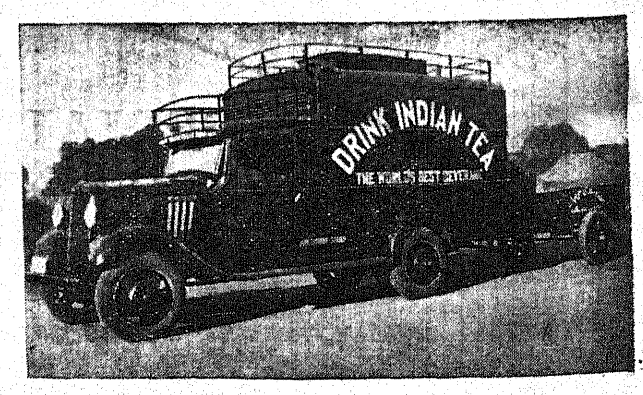
The Industrial Engineering section is maintained at a net cost of about Rs. 2,35,000. The boring sets maintained by the department bored 62,309 feet during the year, the greatest aggregate depth on record. The report on the working of the power drills raises the question whether the very large outlay on these drills and on their maintenance is justified. The expenditure in the section needs scrutiny with a view to economy.

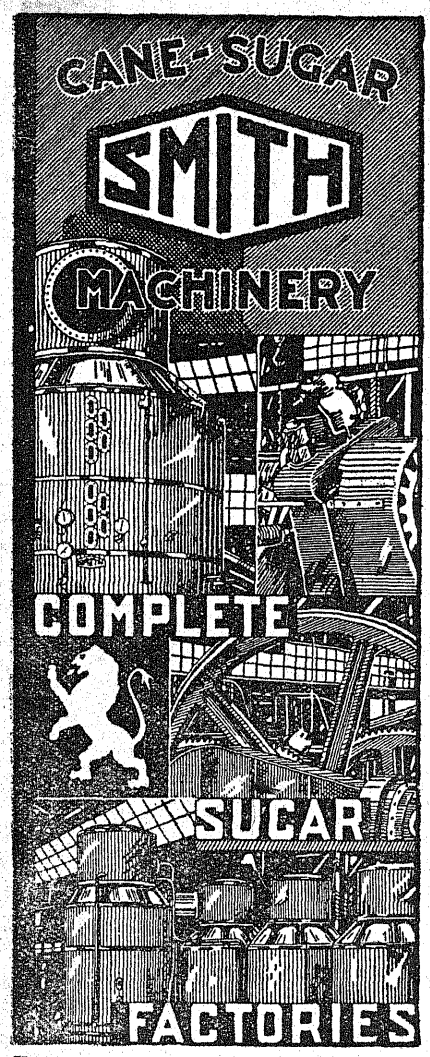
POPULARISING INDIA TEA

PROPAGANDA BY MOBILE TALKIE

The Indian Tea Cess Committee have recently acquired a travelling talkie cinema unit which will be used for the purpose of propagating Indian tea as a beverage amongst the population of India. Appropriate propaganda sound pictures will be shown, and the unit will form an addition to the Indian Tea Cess Committee's already large organization. The Committee already has a silent unit working in the United Provinces, and it is confidently expected that the addition of this more modern attraction will give added impetus to the campaigns which are now in progress in this area and elsewhere.

This travelling talkie outfit may be considered as the first of its kind to be utilised solely for mass propaganda in this country. The installation is a complete Theatre Model Talkie unit suitable for outdoor use, and the sound can be heard distinctly in the open air for a distance of 150 feet. One 6-cylinder truck with a special body has been constructed to carry the sound-recording apparatus, which includes a cinemaprojector, a loudspeaker and gramophone equipment. The loudspeaker is the latest model, and is suspended behind the screen, thereby giving a natural talkie reproduction in the open air. The current is supplied from a petrol run generating set installed on a trailer. A special feature is that whereas the provision of the generating set makes it independent of outside power-supply, current from local supply organizations can be used when necessary or desirable. The equipment has provision for showing silent pictures with music, and also for projecting slides. The unit is at present in operation in the United Provinces area.

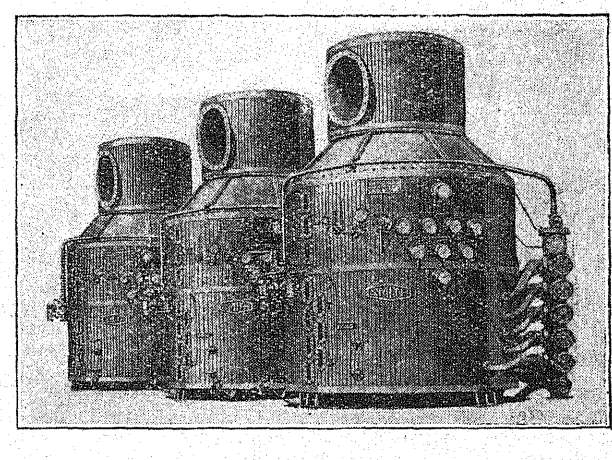




CANE SUGAR MACHINERY

of every description.

Steam
or Turbo-Electrically
Operated.



MODERN HIGH GRADE INSTALLATIONS

- Multiple Crushing Mills
- Horizontal and Vertical Juice Heaters
- Eliminators and Clarifiers
- Multiple Effect Evaporators
- Condensers and Duplex Pumps
- Centrifugals and Accessories
- Sugar Driers and Elevators
- Megasse Elevators
- Liming & Sulphuring Equipment
- Subsiders and Tanks
- Filter Presses and Bag Filters
- Coil and Calendria Vacuum Pans
- Crystallisers and Conveyors
- Steam Boilers

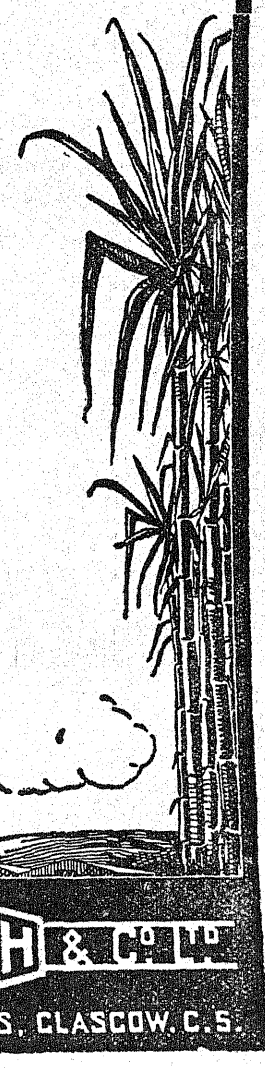
ALL SPECIALLY DESIGNED FOR INDIAN REQUIREMENTS.

We are in a position to submit comprehensive estimates with technological advice and other expert assistance for complete Sugar Factories following either the Double Sulphitation or Carbonatation Process with or without Suchar Bleaching Treatment, for lower grade Sugars.

Sole Agents in INDIA & BURMA:

BURN & CO., LTD.

SUGAR PLANT DEPTT., HOWRAH



A. & W. SMITH & Co LTD
ECLINTON ENGINE WORKS, CLASCOW, C.5.

EXTENSIONS TO

YOUR SUGAR MILLS

We specialise in the manufacture of:

GUR MELTERS
BAG FILTER TANKS
CRYSTALLIZERS
ELIMINATORS
SETTLING TANKS
ETC., ETC.

ALSO
COMPLETE SPRAY COOLING PLANTS
EMBODYING
PATENT NON-CLOGGING NOZZLES
GIVING
WHIRLING SPRAY
AND
MAXIMUM COOLING

INVESTMENT OUTLOOK IN 1935

CERTAIN CONTINUANCE OF CHEAP MONEY

INDUSTRIALS SOMEWHAT OVER DONE

By R. GORDON CUMMINGS.

By Air Mail

Special for "INDIAN FINANCE"

London, Jan. 15, 1935.

Although there was a small set-back in certain sections, stock markets maintained a very buoyant tone throughout the past week, thus continuing practically without interruption, the steady rises seen since the Christmas holidays. Industrials and gold shares have been prominent, while Gilt-edge have made a stormy showing. During the last few days there has been persistent buying of iron, coal and steel shares at steadily rising prices.

In many instances, the rise was overdue ; but in other cases I fail to see any reason for the present super-optimism, excepting that it may be attributed to New Year enthusiasm.

The weaker sections have been Brazilian stocks and oil shares, the former on fears that full remittances of interest payments will not be made, and the latter on unfavourable developments in America arising from the legal decision relating to restriction of crude oil output.

Not before time tin shares are showing increasing signs of activity, while rubber shares are steadily firming up.

The recent steady rise in the price of British funds has naturally led to many discussions as to the future possibilities of these stocks and the probability of the Government coming forward with a large conversion offer. In two instances record prices have been seen in the past week, 2½% *Consols* having gone over 94, and 3½% *War Loan* to over 110.

Outlook for Gilt-edged.

The future outlook of Gilt-edged stocks is worth analysing. Post-war investors and statisticians are in many cases apt to make comparison only with conditions since the end of the War. They fail, or do not wish, to take into account credit conditions prevailing prior to 1914. Many of us became accustomed to interest rates of 5% or even higher, so that in the last year or so it has been difficult to adjust ideas to the possibilities of a permanent yield of between 2½% and 3⅓%.

The position must, however, be faced that a new economic era is dawning. Compared with pre-war days the supply of credit in this country is now enormously greater, while savings are being bottled up internally owing to restrictions on foreign lending. The only outlet for these savings is in Home securities. While the new issue market is certainly expanding, the number and volume of new issues is not sufficient to absorb the surplus funds available. Hence, these surplus funds have to be invested in existing securities. While there are signs, as instanced by the issue last week of a substantial block of bonds on behalf of the Norwegian State Bank, that the ban on foreign lending is being lightened, this continued restriction is helping to increase an already difficult position.

There is no doubt that safety-first investment demand will continue, and it may be feasible for the present generation to accustom itself to a long term yield of 2½% or even less. Only on Friday last the Bristol Corporation made an issue of nearly £3,000,000 of 2¾% stock, redeemable between 1955 and 1965, at 99%, the list of applications being over-subscribed in a few minutes. This issue follows a series of loans on behalf of municipalities at steadily reduced interest rates.

One thing appears certain ; and that is that present low money rates will continue for a number of years. The problem of the holder of Gilt-edged stocks is thus difficult. On the one hand, it is impossible to invest surplus funds at a good rate of interest, while on the other hand, holders of stocks such as 5% Conversion Loan are faced with the problem of holding their stock and taking a good yield, or selling and accepting the substantial capital profits shown.

Profitable Exchanges.

For those, whose main concern is income, I advise retention of such issues. For those, however, who wish to take their profits the opportunity should be looked for of selling between now and the end of March. I fully expect that most Gilt-edged stocks will continue to rise until before the Budget.

While the difficulty of re-investment is great, there are still several Colonial stocks giving reasonable yields and definitely redeemable within the next 14 years. I particularly mention *Queensland* 3% 1922/47, *Jamaica* 3% 1922/44, and *Victoria* 3% 1929/49, all of which can be bought at a round par.

I see no reason why Indian Government stocks should not be standing at higher prices. For instance, *India* 3% can be bought at 95½, whereas 3% *Local Loans* are standing at 98. In effect both stocks have no fixed redemption date. Another instance is *India* 3½%, redeemable after 1931, at 101 as against 3½% *War Loan,* redeemable after 1952, which is now priced at a round 110. Profitable exchanges such as there should certainly be with making.

Future of Industrial Shares.

As I have pointed out above, industrial shares as a whole have been steadily rising since the beginning of the year. I think that in many instances this rise is being overdone, as results for 1934 due to be published during the next few months will not justify existing levels. I quite agree that something should be paid for future prospects; but many investors are overlooking the fact that trade recovery during the last 12 months was in excess of 1933, while present indications point to a definite slowing down in further expansion of trade activity during 1935. In some quarters it is argued that with gilt-edged stocks yielding only about 3%, first class industrial equities should be placed on a 3½% to 4% basis. This, I feel, is far too risky in most instances. If investors and speculators would only pause to consider what happened during the 1928 boom, they would not be quite so optimistic as regards future prospects.

During the last few days I have had a list submitted to me by a leading firm of stockbrokers showing the current yields on many of the leading industrial shares. Space does not permit of giving full details, but it is sufficient to point out that quite a number of issues yield only between 3½% and 4%, while in no instance is the yield over 4¾%. I advise all my readers to carefully weigh up prospects, not over the next 12 months, but over the next few years before they even think of buying high-priced industrial shares.

Outlook of Debentures.

It is only natural that fixed-interest securities, such as debentures and preference shares, have also been rising in price. Many debenture stocks cannot now be bought to yield much more than 3½%, while quite a number of preference shares are yielding less than 4%. Practically every day brings forth announcements that another company is about to redeem its existing high interest debenture stocks, and replace these with a lower rated stock. In certain cases debentures are being repaid out of surplus liquid resources without having recourse to additional borrowing while these financial savings are to the benefit of ordinary shareholders, they increase the difficulties of the debenture holders in finding another profitable avenue of investment.

Three instances recently announced, all dealing with the electrical equipment industry, are striking examples of the present trend. The *General Electric Company* has given notice to repay £3,482,000 4¼% debenture stock. It is not, however, to replace this stock with another issue, but the directors propose offering debenture holders ordinary shares at market price in exchange for their stock. *Associated Electrical Industries* is redeeming £1,036,000 4% debentures at 110% out of liquid resources, so that no new issue is involved. Finally, *Siemens Bros.* is paying off £490,000 4½% debenture stock.

Banking Profits in 1934.

A matter of great interest has been the publication of the British banking companies' profits for the past year. The "Big Five" banks all earned increased profits in 1934, the total after making all adjustments being £8,520,536, against £8,078,728 in 1933, and £7,932,157 in 1932. The increase in 1934 compared with 1933 is therefore over £441,000, and against 1932 an increase of over £588,000.

Figures of the individual banks, however, show decided fluctuations. The Midland profits, for instance, for 1934 being only £25,000 in excess of 1933, against an increase of £273,000 compared with 1932. At the other end of the table Lloyd's increase against 1933 is £212,700, but against 1932 it is only £100,1000. In all cases, dividends are maintained at the same rates as for 1932 and 1933, the payments being: Barclay's 14%, Lloyd's 12%, Midland 16%, National Provincial 15%, and Westminster 18%.

As regards the smaller banks larger profits are shown in each case, those of the District being £390,229, against £378,529 in 1933.

On these results bank shares have steadily risen, and I think that they still offer good investment possibilities.

The Outlook for 1935.

As we are still at the beginning of the new year I think it would be a good start in my first articles to review the possibilities of individual markets during the rest of the year. I admit that this is a difficult task, but I think it only fair to my readers that they should have something to work upon.

It is a well-known fact that markets tend to run in cycles. Given a steady rise in gilt-edged stocks, this will lead to improving prices in other fixed interest stocks, followed by investment buying of first class ordinary shares such as those of insurance and banking companies. Eventually, investment demand will spread to leading industrial equity shares with sooner or later an overflow into speculative markets.

Insurance Shares.

In view of the satisfactory banking profits, I repeat that bank shares are worth buying by lock-up investors. Over a period of years in the past insurance shares have registered steady capital appreciation, and I see no reason why this should not apply to the future. Investors in this country have always been accustomed to a low yield on insurance shares, but for those prepared to ignore immediate income, capital appreciation is almost certain to be seen in future years. Most of the British insurance companies have now announced the result of their Life business for 1934, and in practically every instance increases are shown over the figures for 1933.

My first selection is *Prudential Assurance* £1 fully paid A shares yielding £3/1/7% at 38½. This is the largest insurance company in the world, its assets at the end of 1933 exceeding £277,000,000. A new comer which I think favourably of is *Economic Insurance* £1 shares, 5/- paid up, yielding £3/12/9% at 44/3. Prior to May 1934 these shares were mostly held by Furness Withy, the shipping company. The Company transacts all classes of business and steadily expanding profits can be looked for. A rather more speculative issue are *Employers' Liability Insurance Corporation* £1 shares, 5/- paid up, which give the high yield of £5-6-8% at 75/-. Although this Company transacts a large proportion of its business in the U.S.A., I fully expect that the report for the year just ended will show a strong position, and that the dividend will be maintained at 80% tax free.

Electrical and Heavy Industries

Coming to the industrial and similar markets, I must repeat my previous warning of caution. Investors should not rush in to buy debentures, and preference and ordinary shares standing at fancy prices without careful consideration. My purpose, both now and in future, will be to select so far as possible stocks giving good yields and offering prospects of capital appreciation, together with improving security. This week I will only indicate shares worth buying, but as the opportunity arises I shall later deal more fully with certain of these.

Output of electricity has been expanding steadily and further increases should continue. A new comer to the market, *B. E. T. Electricity Supply* 4 per cent. debentures at 107, free of stamp, to yield 3¾ per cent., are worth buying as an investment. In the case of ordinary shares caution is necessary, as I feel that sooner or later legislation will be enacted to restrict the profits of electric supply companies. Attention should be confined to companies which are rapidly expanding their area of supply, such as *British Power and Light* £1 ordinary at 25/-, and *Scottish Power* £1 ordinary at 45/-.

Turning to the heavy industries, the past week has witnessed some very substantial rises in share prices. This should not deter investors as I fully expect the iron, coal and steel industries to show continuing expansion in 1935. *Amalgamated Anthracite* 5 per cent. debentures, which cannot be redeemed before 1938, and then only at 103½ per cent., yielding over 4¾ per cent. at 105 on my investment selection, while *Powell Duffryn* 5 per cent. £1 preferred ordinary shares at 22/6 are an attractive prior charge offering scope for appreciation as they can be exchanged during the next two years into ordinary shares at par. The best equity share is *Staveley Coal and Iron* £1 ordinary now at 41/-.

Beer and Chemicals.

Brewing companies have benefited recently from the reductcion in the beer duty in April, 1934, and also from increased spending power. Equities such as *Watney Combe Reid* £1 deferred ordinary stock units at 74/-, and Mitchell's and Butler's £1 ordinary at 87/- are both very promising purchases. It is fully expected that the interim dividend on Watneys, due shortly, will be increased. *Distillers,* the large whisky combine, £1 ordinary units are also a sound investment at 94/6. The interim dividend is maintained at 7½ per cent., and a final of more than 12½ per cent. can be looked for.

The chemical trades have benefited and will continue to benefit from better trade and an increase in Overseas business. *Imperial Chemical Industries* holds a predominant position in all branches of the business, and in view of the enterprising management profits for the past year should certainly set up a fresh high record. The £1 ordinary at 38/6 and the 10/- deferred shares at 10/9 are under-valued on prospects. *Salt Union* £1 ordinary are also a promising lock-up at anything round 39/-.

The building and kindred trades have been benefiting for some time from increased building activity. Judging by recent statistics I see no reason for this activity shewing any decline. The leading company in the brick trade is *London Brick Company and Forders.* Another prosperous company is *Eastwoods Limited,* whose £1 ordinary shares are worth more than their present price of 54/-.

Michael Nairn and Greenwich, the leading linoleum manufacturers, announce an increase of almost £39,000 in profits, the amount earned for 1934 being £230,291. Despite this increase the ordinary dividend is only maintained at 12½ per cent., as for a number of years past. Yielding almost 4 per cent. the £1 shares are a good purchase at 64/9. The paint industry is also profiting from the building activity, and in this direction I like *Pinchin, Johnson* 10/- ordinary shares at 43/6.

Woolworths and other Stores

Following greater spending power on the part of the public, luxury and similar trades, together with the retail store companies have enjoyed increasing prosperity. This is demonstrated by the large increase in the profits of *F. W. Woolworth & Co.,* which owns over 520 low-priced stores throughout the country. Profits for the year ended 31 December, 1934, set up a **fresh high record at** £3,792,278. This compares with £3,397,949 in 1933, and £3,521,057 in 1932. After paying preference dividends, earnings for 1934 on the £3,750,000 ordinary capital equalled 122.5 per cent. The dividend, however, is only made up to 80 per cent. as in the previous year, while the amount carried forward **is increased from £4,429,676 to** £5,614,454. Mere maintainance of the dividend caused disappointment and led to a sharp fall in the 5/- shares to 112/6. They have since recovered to round 115/-, but at this latter price I consider them to be fairly valued in view of the possibility of increasing competition.

I much prefer *Harrods* £1 ordinary at 80/-, or as a speculation, *Swears & Wells* £1 ordinary shares at 26/6. *Debenhams Limited* 7 per cent. 10/- third preference at 12/-, and 1/- ordinary shares at 4/- are also worth picking-up.

Tobacco and Textiles

It is fully expected that *Imperial Tobacco,* the large combine, will show a sharp increase in profits when the next report is published, and although the £1 ordinary units are 142/- they are still the best purchase in tobacco shares. *Godfrey Phillips* and *Gallahers* have been very active, but the only justification in the first instance for the rise is the possibility of the company being taken over by one of the other leading groups.

The rayon industry should continue its steady progress. Selections in this group are *British Celanese* 2nd preference at 15/6 as a speculation, and *Courtaulds* £1 ordinary at 50/- as an investment.

Signs of improvement in the Lancashire cotton industry are shown by the results of *Lancashire Cotton Corporation* which reports profits of £30,179 for the year to 31 October last, against a loss of almost £70,000 in the previous year. These figures are before providing for depreciation or debenture interest. Although recent negotiations for stabilising prices do not appear to have been successful, there is still hope in the trade that manufacturers will come to a profitable understanding. *Calico Printers* £1 5 per cent. preference shares at 19/- are one of the few preference issues on which dividends have been regularly paid. Ordinary shares worth buying are *English Sewing Cotton* at 45/6, and *J. & P. Coats* at 68/6.

Next week I propose dealing with certain other markets, particularly those connected with transport and base metals.

Market Pointers

After a long period of dullness Australian gold mining shares have suddenly burst into the limelight, and following considerable speculative activity many sharp rises have been seen. Shares which have not participated to a great extent so far, and which offer speculative possibilities, are *Gold Exploration and Finance of Australia* at 11/-, and in low priced issues, *Clutha River Gold Dredging* at 2/-.

It is now rapidly being recognised that a number of the West African gold mines are not so speculative as was previously thought. For lock-up purchases *Ariston Gold Mines* at 12/9, and *Gold Coast Selection Trust* at 45/-, are well worth the speculator's attention. *Atta Gold* 2/- shares at 7/3 are the best low-priced speculation.

Amalgamated Anthracite £1 ordinary have risen sharply from 3/9 to 5/- on belated recognition of the increasing business which this large South Wales combine is doing. I think they are still undervalued and worth buying.

Satisfaction has been expressed with the official decision to reduce the jute crop area in India during 1935. This should benefit *Jute Industries,* where 10/- preference shares have risen to 6/3. As profits for the past financial year shewed marked expansion, there shares are still not over-valued.

Announcement that *The London Passenger Transport Board* is to seek powers to borrow up to a further £10,000,000 led to a fall in the "C" stock to 97½. Around this level it is reasonably valued.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

Calcutta, January 25.

Normal trade was reported in the Stock Exchange during the period under review, and the recent hectic buying was not in evidence. Government Securities ruled fairly steady following the firmness of India Government's Sterling Securities in London. Jute Mills shares were rather irregular. Cottons remained dull and practically neglected. Coals, on the other hand, were very active during the early part of the session, but towards the close profit taking was in evidence. Among Miscellaneous Industrials a certain amount of interest was shown in Public Utility Concerns while certain Engineering Companys were also popular. Sugar and Shipping section accounted for a fair turnover. Teas continued dull and uninteresting.

Government Securities.—In sympathy with the strength of India Government's sterling securities in London, Gilt-edge section ruled steady although price movements were very small. 3½ per cent. Government Paper, after its recent fall was marked up at one time to Rs. 98-10 but at the time of writing the price is Rs. 98-6. Other terminables were more or less unchanged. 3½ per cent. Loan 1947-50 is now quoted at Rs. 102-5; 4 per cent. Loan 1960-70 at Rs. 110-7; and 5 per cent. Loan 1945-55 at Rs. 118-12. 3 per cent. Loan 1941 may be placed at Rs. 101 and 4 per cent. Loan 1943 at Rs. 106-2. Among medium dated issues 5 per cent. Loan 1940-43 was enquired for at Rs. 109-2 and 5 per cent. Loan 1939-44 at Rs. 108-1.

Money continued tight and the tone of this section towards the close was rather subdued. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—There has been a keen demand for Preference shares and more business was reported than of late. Among Jute Mills Alexandra Preference was marked at Rs. 136-8, Bally at Rs. 140; Birla changed hands at Rs. 118; Hukumchands at Rs. 119; Kamarhattys at Rs. 135-8; Kanknarrah at Rs. 136-8; Lansdowne at Rs. 132. Among others, business was reported in Darjeeling Himalayan Railway Pailway Preference at Rs. 105-8; Kesoram Cotton Preference at Rs. 133-8. There has been a good demand for Smith Stanistreet Preference and the rate was marked up sharply from Rs. 40 to Rs. 60. Bengal Telephone Preferences were also enquired for and changed hands at Rs. 16. Burn & Co. 6 per cent. Pref. was dealt in at Rs. 117 and 7 per cent. issues at Rs. 133. Kumardhubi Engineering Preference kept very steady at Rs. 85. B. I. Corporation Preference advanced to Rs. 155; Calcutta Tramways recorded a deal at Rs. 14-8; Titaghur Paper (Pref. of Rs. 100 paid) was marked at Rs. 160 and India General Navigation and Railway Preference at Rs. 131.

Enquiry for all sound Debenture continued as usual, but only a small business was reported owing to absence of sellers.

Other Investment Stocks.—The enquiry for Imperial Banks shares appears to have abated for the time being. The fully paid up issues are now quoted at Rs. 1,615 ex-dividend and Contributories at Rs. 405 ex-dividend. Central Bank's shares are quoted at Rs. 38-8. Among Insurances, Concord of India changed at Rs. 12-4 Prem. A fairly large business was reported in Light Railways' shares at steady rates. Government Guaranteed issues are quoted on the basis at Rs. 92 when available. Among shares enjoying District board subsidy, Arrah-Sasaram accounted for a deal at Rs. 65 and Buktiarpur Behar at Rs. 69. Hoshiarpur Doab changed hands at Rs. 95 and Sara Serajgunge at Rs. 93. Mymensingh Bhairab Bazar (rebate) was marked at Rs. 87-12 ex-dividend and Shahdera (Delhi) Saharanpore at Rs. 131 ex-dividend.

Among other Transport Companies' shares, Calcutta Tramways (ordy.) accounted for a deal at Rs. 20-4 and Walford Transport at Rs. 1-14. Calcutta Landing and Shipping improved to Rs. 15-8 on the issue of a satisfactory report. India General Navigation and Railway (ordy.) advanced to Rs. 128-8 on good enquiry, and Port Shipping to Rs. 16.

Cotton.—Dull conditions have obtained and only a small business was reported. Bengal Nagpur (ordy.) changed hands at Rs. 17-12; Kesoram (ordy.) at Rs. 4-6; Muir Mills recorded a deal at Rs. 340; and Mohini Mills changed hands at Rs. 11.

Coals.—The activity manifested in this section during the past few weeks has been maintained and a fairly large business was reported during the early part of the session. Latest report from coal fields indicates that the demand for steam coal has improved during the past week and the forward position looks more hopeful. Small coals are also in strong demand and most of the collieries are without stocks of this quality.

At the time when this industry, as a whole, is looking forward with great interest to the Government's announcement regarding the abolition or reduction of surcharge on long distance freight, the action of the Eastern Bengal Railway in abolishing the same, on coal despatched to stations on a certain section of this line, has certainly given an impetus to the industry and is regarded by many that the abolition of surcharge is, an accomplished fact.

On the re-opening of the market, on Monday, after the week end holiday a great activity prevailed in coal shares and certain popular stocks such as Bengal was marked up sharply to Rs. 305. Equitable advanced to Rs. 40; Hurriladih to Rs. 16-8; Mundulpore on the rumour that the colliery will be reopened shortly spurted upto Rs. 9; Rewa advanced to Rs. 14; Sendra to Rs. 17-6; Standard to Rs. 31-8 and Union to Rs. 18. As the session progressed profit-takers appeared and the rates now ruling are considerably below the best, although there was no selling pressure. Bansdeopur met with a strong enquiry from investors and the rate advanced to Rs. 9.

At the time of writing, Bengal is quoted at Rs. 285; Burrakur (ordy.) at Rs. 15-4; Equitable at Rs. 39; East Indian at Rs. 21; Hurriladih at Rs. 15-8; New Bheerbum (ordy.) at Rs. 15-10; Rewa at Rs. 14; Sendra at Rs. 15-12; and Standard at Rs. 31.

Jutes.—Jute Mills shares opened quiet on Monday in sympathy with easier commodity markets, but as the session progressed more buying power developed and prices appreciated considerably when it was known that there was no truth in the rumour of the possibility of a break away of certain important Jute interest from the Jute Mills Association. Howrah after opening at Rs. 64-9 sharply advanced to Rs. 65-8 and Kamarhatty from a quotation of Rs. 669 improved to Rs. 680. At the time of writing the prices are going below the best. Alliance was marked upto Rs. 478 on the rumour of better dividend. Anglo-India kept very steady round about Rs. 560; Bally at Rs. 270; and Barnagore at Rs. 230. Belvedere advanced to Rs. 495 but again came back to Rs. 485. Budge Budge kept steady round Rs. 405; Champdany advanced to Rs. 230; Cheviot to Rs. 262 and Lansdowne to Rs. 235.

There are sellers of Gourepore at Rs. 868 and India at Rs. 555; on the other hand Standard improved to Rs.430 and Union to Rs. 600.

Among Rupee 10 stocks, Clives and Nationals were bright features. The former advanced by Rs. 2 to Rs. 40-2 and the later improved by a Rupee and a half to Rs. 30 at one time during the week. At the time of writing Clive is quoted at Rs. 39-8 and Nationals at Rs. 29-10. It is rumoured that Kamashatty and Kanknarrah will pay the same dividend as that of the last half-year, that is Rs. 17-8 for the former and Rs. 15 for the later, while the market

expected increased dividends. The tone at the time of writing is quiet but steady with Howrahs at Rs. 64-14 and Kamarhattys at Rs. 668.

Electricals.—Enquiry on investment account was fairly in evidence in Public Utility companies' shares in anticipation of better return in future. Benares Electrics improved to Rs. 15; Barrackpore Electrics changed hands at Rs. 97; Jubbulpore kept steady at Rs. 13-4 and Upper Ganges Valley at the same figure. Patna Electrics accounted for a few deals round about Rs. 17-12; Cuttack Electrics were marked at Rs. 8-8 and Upper Jumna Valley at Rs. 13. There are sellers of Dacca and Muttra Electrics at last levels but no business was reported so far.

Engineering.—A fair business was reported in Engineering section although there was not much important price movement. Bengal Iron, improved to Rs. 5-4 on the news of the reopening of its furnace and a fair turnover resulted round about this figure.

Indian Iron and Steel also improved to Rs. 8-8 after their recent slump. Burn & Co. (Ordy.) kept steady round about Rs. 310 and Indian Galvanising at Rs. 11. Indian Standard Wagon (Ordy.) recorded a deal at Rs. 75.

Sugar.—Sugar shares have come in for increased attention and a fair amount of business was put through. Balarampur after changing hands up to Rs. 20-4 are now quoted again at Rs. 19-12. Cawnpore (Ordy.) was very popular and a fair business was reported up to Rs. 38. But the prices at the time of writing is Rs. 37-8, Champaran met with a good enquiry and changed hands up to Rs. 22-12. New Savan was marked at Rs. 14. Raza at Rs. 143. Ryam at Rs. 37 and Samastipur Central at Rs. 11-14.

Miscellaneous.—There was no feature of outstanding interest among Miscellaneous industries and only the usual business was put through. B. I. Corporation (Ordy.) advanced to Rs. 3 but eased off again to Rs. 2-14. Deferreds are quoted at Rs. 37-8. British Ceylon Corporation recorded a deal at Rs. 10-10 and Tide Water Oil at Rs. 8-12. Bengal Paper (Ordy.) was marked at Rs. 97 and Indian Paper Pulp at Rs. 154. Midnapore Zemindary (Ordy.) was quoted at Rs. 80 while Burma Corporations are still weaker at Rs. 6 on London advices.

Teas.—Interest has completely evaporated and dull conditions have obtained. Only four deals were reported up to the time of writing. Bishnauth are now quoted at Rs. 29-10 and Hattikhira at Rs. 27-8.

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent)

Bombay, Friday,

Bombay, January 24.

Money Market.—Money market was steady with interbank call quoting between 3 and 3½ per cent.

Exchange.—Exchange market remained steady with Banks selling T. T. at 1s. 6 7/64d. for near position; 1s. 6 3/32d. for February; 1s. 6 5/64d. for March; 1s. 6 1/16d. for April; 1s. 6 3/64d. for May-June; 1s. 6 1/32d. for July and 1s. 6d. till end of the year. Banks are buying 3 months bills at 1s. 6 3/16d.

Security Market.—The market ruled steady though the prices were slightly lower than the previous week. There are chances of Government taking recourse to expansion of currency. Rupee Security market is expected to move up gradually. 3½ per cent. Paper ruled steady around Rs. 98-5; 60-70 at Rs. 110-6; 55-60 at Rs. 117-4; 45-55 at Rs. 118-14; 1941 at Rs. 101; 47-50 at Rs. 102-4; 1943 at Rs. 106; 1935 at Rs. 101-4; 39-44 at Rs. 108; 40-43 at Rs. 109; 38-40 at Rs. 108-8; Bombay Development at Rs. 103-4.

Shares.—Steels influenced all sections of the market by ruling strong and active and at the close Textiles also firmed up on heavy speculative buying. There has been good turnover during this week. Inspite of the heavy liquidation in Steels and other scrips, offerings have been easily absorbed reflecting inherent strength.

Textiles.—Leading scrips have shown a remarkable rise at the close. On buying pressure especially Dyeings spurted and closed at Rs. 986-4 compared with Rs. 940 in beginning of the week. Central Indias also closed higher at Rs. 367-8. Centuries moved up to Rs. 334-8; Gokaks also firmed up by 7 points and closed at Rs. 333-12; Kohinoors were up by 10 Rupees at Rs. 234-6; New Greats better at Rs. 227-8. *Bombay Dyeings, Central Indias, Centuries, Gokaks and Kohinoors are likely to go still higher.*

Hydro Electrics.—This group moved with the market and Andhras have risen in a spectacular fashion from Rs. 1,750 to Rs. 1,810. Tata Powers after being done at Rs. 1,590 are now steady at Rs. 1,575. Hydros were quoted Rs. 182-8. *Andhra Valleys and Hydros seem attractive for investment at current levels.*

Iron and Steel.—As mentioned before, inspite of the long liquidation, Steels remained firm and active through the week with Ordinaries at Rs. 142-8 and Deferreds at Rs. 650 at the close. The future market in Steels seems to be bound for still higher levels. Ordinaries at current level seem promising lock-up. Second Preferences closed at Rs. 170.

Cements.—Cements were a little quiet on account of profit taking. Bundi closed at Rs. 37-12; Gwalior at Rs. 120-8; Indian at Rs. 376-12; Katni Deferred at Rs. 1,335; Ordinary at Rs. 377-8; Okha at Rs. 208-12; Punjab Ordinary at Rs. 26-6; Shahabad at Rs. 373-12; United at Rs. 78-8.

Miscellaneous.—Belapur Sugars were in keen demand and were done as high as Rs. 302-8 though closed at Rs. 291-14. Bombay Burmas were practically neglected, Old scrips quoting Rs. 402-8 and New at Rs. 131-4. Petrols had a sudden improvement to Rs. 4-5-0 at the close, but closed at Rs. 4-2-0. Tata Constructions were bidding around Rs. 91 at the time of writing. Telephones and Trams were steady at Rs. 119-4 and Rs. 166-8.

Banks and Insurance.—This section ruled steady with Bank of Baroda at Rs. 108; Central at Rs. 38-10; Imperial Fully paid at Rs. 1,615; Partly paid at Rs. 403-2 both ex-dividend; Bank of India at Rs. 123 and Union at Rs. 5-14.

New India Assurance closed at Rs. 45-10; Oriental Life at Rs. 4,600 and Vulcan at Rs. 8.

MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, January 23.

The securities market was comparatively dull except for profittaking deals in Paper and 4 per cent. 1960-70. There was little enquiry for short and medium dated loans. Mysore loans—old issues—were in persistent demand at full prices. Business was hampered in the absence of sellers.

The demand for other classes of fixed interest investments was good. No transactions were reported in Municipal or Port Trust issues owing to scarcity of scrip. Amongst joint stock company debentures business transpired in Cochin Malabars at Rs. 4 premium and Mysore Sugar at Rs. 7 premium. Spencer B. were popular at Rs. 13 x. d. whilst Vasantas were in request at Rs. 105. Tata Second preferences closed easy at Rs. 171 after being done up to Rs. 173.

Banks were dull. Imperial fully paids were done at 1615. Bank of Mysore at 277½ and Centrals at 38¼ C. D. Indian Banks and Indo-Commercial were wanted at quoted levels with sellers absent.

Public utilities attracted more attention. Ajmers were done at Rs. 11¼ and Vellores at Rs. 13¼. Madras Telephones improved to Rs. 21¼ whilst there were buyers for Rangoons at Rs. 13¾.

Mill shares were firm. Buckinghams and Gokaks were very active gaining two and ten points respectively. At the close Buckinghams were bid at Rs. 213 whilst Gokaks were strong at Rs. 231¼. Cambodias met with business at Rs. 13½ and Premier Hosiery Ordinary at par. Vasantas jumped to Rs. 114 cum div. buyers.

Cement shares were erratic and weak at the close. United Cements had a spectacular rise to Rs. 80 but lost Rs. 3 at the close. The market had been dominated by Bombay speculators but there was good investment realisation at higher levels especially in Bundis, Punjabs and Shahabads.

Sugar shares were firm, Deccan Old moved up to Rs. 290 and Mysore to Rs. 25 with several buyers over. India sugars continued steady at Rs. 10½. Amongst outside market shares in which local operators are interested Belapurs were considerably higher at Rs. 297½.

The Rubber share section continued featureless with the solitary exception of Malankaras which were absorbed at Rs. 45. Teas were slightly more active with hardly any changes of note. The market is full of sellers in several instances.

Sterling Kolar mines and oils were an active and rising market. Nundydroogs were higher at the close at 23-1-0 whilst Burma Oils and Shells noted a sharp improvement. B. B. Petrols were a disappointing feature at Rs. 3,150.

In the miscellaneous section local investors continued to absorb Burma Corporation around Rs. 6¼. The weight of London selling dumped local operators. At the close the local market showed considerable disinclination to operate further. Total steel issues monopolised attention again. This market has been consistently bull in these issues. The covering operations on the part of Bombay bears and bull buying accelerated a strong market. At one time the market in Bombay touched Rs. 136 for the ordinaries showing a rise of 22 points from the opening price of the year and 26 points from the lowest price in this month. On account of this there was heavy profit-taking leading to rapid downward fluctuations. The market closed steady in the ordinaries at Rs. 130. The deferred closed at Rs. 640.

The local market undertone is steady. Any falls are likely to ocur only in giltedged and teas.

LONDON STOCK EXCHANGE

On the Stock Exchange most sections were steady during the period under review. Last week there were some doubts about giltedged stocks pending the Government's announcement on Treasury and Imperial bonds. The non-appearance of any notification led to sales of British Loans, which were further depressed by exchange commotion, and by the large Australian Conversion Loan, but buyers came and a strong rally followed on Friday—there after it was steady. On Thursday an easier tone pervaded in giltedged and several issues including 2½ per cent. Consols, 3½ per cent. War Loan and Victory Bonds were quoted lower.

Among other sections, the week is noteworthy for the great strides that have taken place in Oil shares. There has been regular improvement throughout the week. On January 18, Burma Oil, Shell Transport and Royal Dutch shares were quoted 77-6, 50 and £19¾ respectively. On January 24, they were quoted at 82-6, 53-9 and £20 respectively. The improvement has been rather considerable. Excepting for the fact that during some part of the week Teas showed some sagging tendency, they were steady. Rubbers were unchanged. Tobaccos recorded some advances Among Home Rails Great Western and L. M. S. ordinary shares improved and on Thursday they were quoted at £54 and £21⅞ respectively. On January 18, they were quoted at £50½ and £19⅜. Other Industrials were steady and showed few price changes.

NEW YORK STOCK EXCHANGE

The market is already witnessing moderate gain in Industrial activity. There are signs of resumption of recovery in Steel. The operating capacity is on the increase. United States Steel are operating at 44 per cent. for this week. The price of scrap steel is improving. There is also good investment enquiry in Wall Street. Selected Equities like Chesapeake and Ohio, National Distillers, Bethleheim Steel General Motors, American Radiator, Bendix Aviation, Radio Preferred 'B', are recommended.

The market ruled quiet and stagnant on account of pending decision of the Gold Clause cases. Pennsylvania Rail road has declared a dividend of 50 cents. Radio Corporation are paying on the 28th January all arrears of Dividend amounting to Dollars 9.62 on 'A' Preferred stock, hence 5 dollar 'B' Preferred Stock at 42 seems to be attractive.

THE SHAJEHANPUR ELECTRIC SUPPLY CO., LTD.

Report of the directors for the year ended 30th September 1934:—

The Directors beg to submit their Report and the audited accounts for the year ended 30th September, 1934.

Accounts.—The revenue account shows a profit of Rs. 6,839-2-1 as compared with a loss of Rs. 952-8-7 for the previous year and after deducting from this amount the following items:—

	Rs.	A.	P.
Managing Agent's and Agents commission ...	683	14	6
Resident Engineer's Commission ...	273	9	0
Rebate payable to E. I. Railway	1,150	0	0
Total ...	2,107	7	6

there is a nett profit for the year of Rs. 4,731-10-7, which reduces to Rs. 41,428-1-5 the balance to be carried forward at debit of Profit and Loss Account.

Progress.—The Directors are pleased to report a definite improvement in the revenue figures for the year. In the early part of the period under review this was due in the main to the load provided by the sugar centrifugals installed in the town but from May onwards, the arrangements with the East Indian Railway referred to in the last report having been satisfactorily concluded, Shajehanpur Railway station and Rose Junction were chiefly responsible for the increased output shown by the figures given in this report. Whilst at the same time the number of consumers, both domestic and industrial continues to increase. It is feared that the application of the new Excise duty on Khandsari Sugar may adversely affect the prospects of developing the sugar centrifugal load.

SHAHJEHANPUR ELECTRIC SUPPLY CO., LTD.

The following figures show the number of units sold monthly during the last three years :—

	1931-32	1932-33	1933-34
October ...	58,338	34,812	33,541
November ...	53,169	28,774	30,467

INDIAN BANK LIMITED, MADRAS

The Indian Bank, Ltd., has made a Net Profit of Rs. 4,27,318-14-10 for the year ended 31st December, 1934, the Gross Profit and the Management Expenses, etc., (including depositors' interest) for the period being Rs. 13,86,535-2-7 and Rs. 9,59,216-3-9 respectively. The above Net Profit *which is the highest for the Bank* since its starting in 1907, together with the Balance of Rs. 57,409-4-6 from the last year's accounts, amounts to Rs. 4,84,728-3-4 out of which, a sum of Rs. 83,152-15-2 was paid as *ad-interim* dividend at 13% per annum for the first half-year ended 30th June, 1934. Thus, a sum of Rs. 4,01,575-4-2 will, subject to audit, be available for disposal.

AHMEDABAD ELECTRICITY CO., LD.

Report for the year ended 30th September, 1934.

The Authorised Capital of the Company was increased from Rs. 30 lacs to Rs. 75 lacs by the creation of 45,000 new Ordinary Shares of Rs. 100 each.

The Directors have issued Rs. 15 lacs of 5 per cent. Second Lien Debentures of 10 years' currency of which Rs. 7½ lacs were issued with effect from the 15th June, and the balance of Rs. 7½ lacs were issued on 15th October, 1934.

In accordance with the details of this issue given in the Board's Circular to Shareholders dated 26th September, 1934, these Second Lien Debentures will automatically become First Lien Debentures on repayment of the existing 7 per cent. First Debentures, which repayment will be made in terms of the Trust Deed on 31st August, 1935.

Further to this, 15,000 Ordinary Shares of Rs. 100 each were issued in terms of the Board Circular dated 26th September, 1934, and were offered at par to Shareholders in the proportion of one new Share in respect of every two Shares held by them on 18th September, 1934. The issue was substantially oversubscribed.

Production.—The number of units generated was 11.7 per cent. in excess of the figures of the previous year.

Accounts.—The Accounts show that after meeting all operating costs and charges and after setting aside the sums considered desirable by the Directors to provide for Depreciation, amounts written off and Reserves, the balance Sheet amounts to Rs. 1,61,021-14. By adding to this the sum of Rs. 22,243-15-6 brought forward from last year's Accounts, the sum of Rs. 1,83,265-13-6 is available for disposal, which the Directors propose to apply as follows :—To payment of a dividend at the rate of 6⅔ per cent. per annum on amounts as called on 30,000 Shares (now fully paid), payable free of Income-tax Rs. 1,77,883-4-9, balance to be carried forward Rs. 5,382-8-9, total Rs. 1,83,265-13-6.

G. C. Phillips, Chairman. Purshotamdas Thakurdas, Ambalal Sarabhai, C. N. Moberly, Frederic F. Stileman, Kikabhai Premchand, Chunilal V. Mehta, F. C. Annesley, Chamanlal G. Parekh—Directors.

Killick, Nixon & Co.—Agents.

The balance-sheet is as under :—

Liabilities—	Rs.	*Assets*—	Rs.

WORLD OF INDIAN FINANCE

Calcutta, Feb. 1.

After a slight interregnum of somewhat easy money midweek, credits closed firm, with interbank call quoting 3¼ per cent. Even at the latter rate, there were hardly any lenders. Business was also reported at 3½ per cent. for money fixed up to Monday. The present position in the money market is more than tantalising; it is positively annoying. One would have thought that with the greater efficiency and elasticity that is supposed to mark the market technique of the monetary authorities, any special demand for money should not be allowed to cause acute and continued pressure. Here in India we have had this phase of stringency for weeks on weeks and the authorities persist in the same old policy and the same old tactics as if the new situation does not call for action suited to the needs. The case for expansion of currency at this juncture is examined at length in the Editorial Section; and so far as *Indian Finance* is concerned, it holds strong views in this matter. In our opinion, expansion of currency ought to have taken place as early as the first week of January; and such delay as has taken place and is taking place, is a measure of the callousness of the Government to the interests of the money and trade markets. It is amazing that the Government should sit still while the call money rate has risen to, and been maintained at, the same level as the Bank rate. It was only the other day that the British Chancellor of the Exchequer stated, in categorical terms, that a cheap money policy continues to be the aim and objective of his Government; and that cheap money has played an important part in stimulating trade revival and will be allowed to play an increasingly fruitful part in this regard. The practice of the Indian monetary authorities is to force on the country tight money while it is entirely within their power to follow the same policy that is pursued by the British Treasury.

In this section, it is useful and necessary to assess the actual measure of currency expansion that is called for by the present situation. At the very commencement of this argument, we may re-state that we stand by the principle we have enunciated, namely, that remittances up to the limit of the budgetted programme must be deemed Treasury transactions while sterling purchases after that limit had been reached must be currency transactions, resulting in an automatic expansion of currency. When we demand that surplus remittances should be used as the base for further currency, we ask for nothing new or extraordinary. Our demand is nothing more than that the functioning of sterling exchange standard should be as automatic as is practicable. It is really the Government who are behaving in an extraordinary manner. It is for them to explain why they are preventing the automatic functioning of sterling exchange standard. The tap-rate for intermediate sterling has been fixed this week at 1s. 6 3/16d., which is the upper point. It is obvious that tenders of sterling at the upper point should be resulting in automatic expansion of currency if there were no manipulation in the working of the standard. Any exchange standard lends itself to manipulation; but manipulation should not be allowed to degenerate into abuse. If, then, remittances in excess of the original programme must be accounted as currency transactions, the ascertaining of the exact measure of currency expansion now needed or to be effected hereafter becomes easy. As at date, inclusive of the sterling purchases on the tender day and the intermediate sterling that should have been bought in these five days, total remittances might be in the neighbourhood of £30 million. At the budget time last year, the estimate of the remittance programme was £26.7 million. There has, therefore, been an excess remittance of £3½ million. There is an unanswerable case for an immediate expansion of Rs. 5 crores. It must be added that any further purchases of sterling must be accompanied by a corresponding expansion of currency. We estimate that February and March should yield to the Treasury anything like £12 million of sterling. This means that there should be expansion in these two months for Rs. 12 crores. There should, thus, be a minimum expansion of Rs. 20 crores in the remaining weeks of the current financial year.

The Government need have no fear that if currency were expanded by this sum, there will be any undue

setback in exchange. What is really taking place is an undue firming up of the rupee-rate. Such expansion as takes place will only have the effect of keeping exchange at a more normal level.

In this connection, it is interesting to speculate on the likely attitude of the monetary authorities after the Reserve Bank is seized of the responsibility for currency reserves and currency transactions. Does the Reserve Bank Act as it stands give full and final discretion to the Governor and Board of the Reserve Bank? Is there anything in the law which will enable the Government to "poke their nose" in currency management? Or even if according to the strict letter of the law they could not interfere, will the constant contact between the Reserve Bank authorities and the British authorities mean the catching of the deflationary infection by the former? We have hardly any materials on which we can answer our own questions. But with a Board in which we have men like Sir Purshottamdas Thakurdas, Mr. F. E. Dinshaw and Mr. Shri Ram and with a Governor like Sir Osborne Smith at the helm of affairs, we do hope that at the end of this financial year, we shall have seen the end of the deflationary craze.

We cannot, in fact, understand the persistence of the Government in this policy. While every interest in the country is suffering seriously, the Government themselves are seriously victimised. Is it at all advantageous to them if Treasury Bills borrowings are rendered more difficult? Does it profit them if the rate for short-term borrowings is rendered more and more onerous? Does it please their hearts to see giltedge suffer retrogression in prices? Does it facilitate future conversion programmes if, at a time when full confidence is reviving in this minds of investors, a rude shock is being administered? If the Government were well advised, they should be doing everything in their power to promote and accentuate the favourable influences that are now manifest in the giltedge market. We know that they have not promoted the favourable influences. On the other hand, they have, we know, done their best to cause a setback in giltedge prices by selling considerable parcels of securities both from the holdings of the Imperial Bank and the Controller of the Currency. We cannot appreciate these tactics because we believe that the time is most opportune for preparing the ground for brilliant and striking conversion plans. We would like, in the first place, the issue of a 2½ per cent. short-term loan at an yield of round-about 2.8 per cent. Such a loan should be made available for conversion to the holders of 5 per cent. 1935 bonds and 6½ per cent. 1935 bonds. Cash applications should also be invited for a sum of, say, Rs. 10 crores. The Reserve Bank will be coming into existence on April 1. It would be in receipt of Rs. 5 crores by way of share capital and, a few months after, of Rs. 6 crores to Rs. 7 crores by way of compulsory deposits from member banks. The bank would require, at the very start, a considerable portfolio of short-term giltedge securities. It is unthinkable that the Bank will be able to buy short-term securities from the open market for its full requirements. It is, therefore, quite on the cards that if the proposed 2½ per cent. loan were made available for cash subscriptions, the Reserve Bank will be taking up a big slice. If the loan is floated before the inauguration of the Reserve Bank, some arrangement could be made whereby the purchase is made by the Imperial Bank or some other authority, the same to be handed over to the Reserve Bank after commencement of business. The 3 per cent. 1941 loan has kept in good demand at over Rs. 101. The yield at this price is about 2.8 per cent. It is not possible to buy much of this scrip from the market. It shows that the 2½ per cent. short-dated issue will be assured of immediate success. If such a loan is advisable and possible, is the present dear money policy of the Government proper tactics?

After this loan and the issue of the Reserve Bank shares are out of the way, we would like the Government to tackle the problem of converting the 3½ per cent. Rupee Paper into a 3 per cent. loan. The best plan would be to give three alternatives to the holders of 3½ per cent. Paper, namely, a 2½ per cent. short-dated issue giving an yield of 2¾ per cent., a medium-dated 3 per cent. loan, and a long-term 3 per cent. loan, the latter two being at par. By this means the success of the conversion will be assured. At the same time, the Government will not find that the whole block of 3½ per cent. Rupee Paper is converted into a scrip in a single maturity. Most of the people who hold 3½ per cent. Rupee Paper are believers in long-term securities. But a good few, especially in view of the disastrous experiences of recent years, might go in for a medium-term security. Such portion of the 3½ per cent. Paper as is held in the money market circles may happen to be converted into the short-dated issue. Our own view is that the proportion among the short-dated, medium-dated and long-dated issues will be 1: 2: 3. If a result like this is achieved, it should be deemed a gorgeous plume in the Finance Member's cap. It is his for the taking. Why should he feel hesitant or diffident?

Tight money conditions depressed the giltedge market this mid-week. 3½ per cent. Rupee Paper sank to Rs. 97-6 but recovered, towards the finish, to Rs. 97-13 on more reassuring news from the London giltedge market. The operators in the market are quite bullish; but what is tarresting progress, and what, in fact, has caused a retrogression is the refusal of the Government to effect the expansion that is felt, on all hands, to be necessary and even unavoidable. There is really no reason why the rise in 3½ per cent. Rupee Paper should not be resumed at an early date; and, for our part, we should think that its intrinsic price is Rs. 100 in the near future, with higher levels when the Government realise the inevitability of conversion.

The exchange market has been fairly firm, though business that transpired has been on the small side. Clive Street has been entirely dominated by Bombay. Money tightness has supplied the main strength.

The closing rates are: 1s. 6 1/8d., for February-March 15 T.T.; and 1s. 6 3/32d., T.T. up to April.

Bills may be quoted: 1. 6 7/32d., for February; 1s. 6 3/16d., for March-April and 1s. 6 5/32d., for May-January.

Money has been in great demand, with practically none available. The rate for call money may be quoted 3¼ per cent. One month, two month and three month deposits may be quoted 1, 1¼ and 1½ per cent

Thursday evening.

The international exchanges have moved during the week within limits which must be considered narrow compared to the wide fluctuations of a fortnight ago. That was the time of narrowing uncertainty, when international finance was a prey to an orgy of rumours regarding the revaluation of the dollar or the stabilisation of the exchanges. Happily that orgy is gone ; and the uncertainties have abated. The epicentre of all these disturbances, *viz.*, the Supreme Court's decision on the validity of the gold clause, still continues, however, to record some tremors. But there is no longer the same panic ; and the earth crust seems to settle down. But the topography has changed not a little. There are new alignments of opinion on the question of stabilisation of the exchanges ; and from this viewpoint, the valuable contributions which *Indian Finance* started to publish as from last week from such renowned experts as Dr. Einzig and Mr. Francis Williams have been most opportune and not a moment too soon. The situation, that arose as a result of these rumours and uncertainties, provided an opportunity, which would have been otherwise unattainable, of testing the reactions of France, Britain and the United States to the approach of negotiations for stabilisation. Judging from Dr. Einzig's accounts, France almost meant to carry out such a test ; and if that was her intention, her statesmen must be congratulated on the intrepid tactics which they adopted towards that end.

The situation was, indeed, highly intriguing. The United States, reported to be considering a fresh dose of devaluation, though not as an immediate step, was face to face with the possible necessity of an overvaluation. Britain, secure in her haven of cheap and stable money, was confronted with an invitation into the storm-swept expanses of international finance. And France was represented as holding out the promise of accommodating the franc to the requirements of an international monetary standard. The circumstance that the United States is at the time engaged in the serious imbroglio of the Supreme Court decision has spared her the embrassment of having to make a pronouncement of policy. And France, if it is true that she purposely put out a feeler, was more the mistress of the situation. The result has been that Britain, alone of the three, has to come out and open out her mind.

What makes the last fortnight important is the recording of Britain's reactions to the imminence of stabilisation talks. It is clear from the writings in the British Press and the contributions of some of its important writers to *Indian Finance* of this week that Britain is far from prepared for stabilisation at the present moment. One might think that this is no revelation ; and one had never any reason to think otherwise. But the novelty of this arises from the fact that it was possible for Britain to contend that adherence to sterling was the only form of monetary internationism possible and that if Britain was not prepared to stabilise sterling in terms of gold, it was not because she was for monetary instability but because gold itself was intractably unstable. In other words, she found it possible all along to shove the responsibility for postponement of stabilisation on to other shoulders. Not that even now any blame can justly belong to Great Britain. But there is evidence of a nervousness at the approach of stabilisation which does not augur well for the early restoration of an international monetary standard.

There is, indeed, no reason why Britain should show such signs of nervousness. It was only the other day that Mr. Neville Chamberlain clearly stated the British attitude ; and a mere reiteration should have sufficed. The only change in the position is that France has officially signified her decision not to persist in a deflationary policy and that, like Britain and the U.S.A. and a host of others, she has decided to try a measure of reflation. This has only brought stabilisation lower down from the clouds of idealism into the lower plane of a realisable aspiration. But it is far from having come to earth. A great deal has to be done by France and the U.S.A. before Britain can at all be called upon to state her conditions. But hardly has the name of stabilisation been mentioned, than Britishers are seen to gather round in defence of their cheap money policy. But British apprehensions, one may be sure, are not confined to the continuance of cheap money, but also extend to the possible effects of a devalued franc or dollar on the export trade of Great Britain. At the moment emphasis is laid on the cheap money policy. And it is significant that there are now two potentially powerful movements in England led Mr. Lloyd George and Lord Beaverbrook respectively, both of which heighten the importance of the British monetary authorities continuing to provide the country with cheap and plentiful money.

URGENT NEED FOR REFLATION

Why are the Government fighting shy of expansion of currency while, from every point of view, there is the utmost need now for expansion? Why are the Government persisting in this wanton and callous use of the system of sterling purchases for enforcing a deflationary policy and emphasising the deflationary trend? How long will this fetish of exchange reign supreme over every other interest of the Indian money market? We may say, at the very outset, that there is, in our view, no excuse whatsoever for the present policy of the financial authorities. In fact, there ought to have been currency expansion at the very beginning of this month—an expansion for a considerable amount. For over two years, *Indian Finance* has been urging an examination of the problems raised in this regard by the special factors pertaining to the remittance programmes of recent years. Since the abandonment of gold standard by England in September 1931 and the simultaneous de-linking of the rupee from gold, the actual remittances to the Secretary of State have, year after year, exceeded the estimates made at the time of the budget. The issue which we emphasised in this connection was simple: remittances up to the limit of Government's requirements must be deemed Treasury transactions, and remittances beyond this limit must be treated as currency transactions. If this simple principle were not observed, it results in an unnecessary augumentation of the cash balance in the Home Treasury and an embarassing depletion of Government's cash balance in India. For replenishment of the treasury in India, borrowings in sundry ways have had to be resorted to. In other words, the Government have taken from the market, year in and year out, more money than they intended to at the time when budget estimates were framed. There has thus been a persistent deflationary trend, which has stood in the way of recovery in prices. Our authorities profess that the real salvation from economic depression lies in the materialising of higher prices for commodities. Yet, the exchange and ways and means policy has always tended to depress, and not to stimulate, prices. We wish it to be carefully understood that when we urge the plea for expansion of currency, we are not advocating any inflationary operation. What we ask for can more properly be described as "reflation." To refrain from reflation at the present moment is worse than a scandal ; it is sinful.

* * *

We propose to discuss this question in relation to (*a*) the remittance programme ; (*b*) the ways and means position of the Treasury ; (*c*) the giltedge market ; (*d*) prices of commodities ; and (*e*) the money market position in London. Viewed from any standpoint, there is urgent and imperative need for the Government heeding to the voice of public opinion and to give up their assumption of concentration of financial wisdom in themselves. When Sir George Schuster disclosed his budget estimates on February 28, 1934, he anticipated that the Government would need to remit £26.7 million to the India Office for the current requirements of the Home Treasury. The latest remittance *communique*, which is for the period ended February 26, 1935, discloses that £29.88 million represents the sterling purchases made in this financial year in India ; that, of this amount, £2.25 million was transferred to the Paper Currency Reserve against which expansion of currency was effected ; and that the net remittances to the Home Treasury up to January 26 have come to £27.64 million. Since the issue of the *communique*, the Government have purchased sterling on the weekly tender day. It is also possible that they have bought intermediates at the tap-rate, which, by the way, has now been raised to 1s. 6 3/16d., the upper point. It may, therefore, be said that in the first ten months of the fiscal year, the total remittances would be roundabout £30 million, that is, over £3 million in excess of the programme. Judging from the present temper and trend of the exchange market, it seems safe to assume that, during February and March, the Controller of the Currency would be able to buy anything like £12 million. In other words, the remittance programme as laid down in the budget would be exceeded by about £15 million in 1934-35. The Home Treasury would thus be richer by £15 million at the end of the financial year, while the coffers in India would be drained by Rs. 20 crores. If this surplus of £15 million were not deposited in the London branch of P.C.R. and utilised for issue of currency in India for the equivalent Rs. 20 crores, the shortage to the extent of the latter amount must necessarily be made up by increases in the Treasury Bills outstandings over the amount contemplated in the budget estimates and by larger borrowings from the Imperial Bank on ways and means account or otherwise. At a time when banks are faced with considerable demand for money on account of increased activity in the stocks, giltedge, bullion and commodity markets, the Government should not increase the difficulties by this drain of Rs. 20 crores.

* * *

Thanks to the continuance of gold exports from Bombay, and thanks to the absence in India of foreign short-term funds which can take wings and fly, it seems more or less certain that the actual sterling purchases of the Government would come to exceed the budget programme so long as gold shipments persist. Is it the intention of the Government that they should also persist in the present deflationary policy? A clear understanding of the position in this regard is overdue ; and no time should be lost in enunciating a clear-cut policy as to the distinction between currency transactions and Treasury transactions in relation to sterling purchases. The Government have every business to go to the market and buy sterling so long as they have need for sterling for the *bona fide* requirements of the Treasury. But the moment they have secured their requirements, they should step out of the market. It is the market that should go to the Government and sell sterling if it desires to transfer funds from London to India. And when sterling is thus tendered by the market to the Government, the proceeds thereof should be immediately deposited in the currency reserve and utilised as the basis for corresponding expansion of currency. Any other policy is opposed to scientific canons and detrimental to national interests.

* * *

It is obvious that, from the point of view of ways and means, the obstinacy of the Government becomes even more difficult to understand or explain. The present total of Treasury Bills outstandings with the public is more or less near the figure assumed in the budget, that is, Rs. 30 crores. Looking at the

maturities in February and March, and taking into account the present and prospective conditions of the money market, it seems doubtful if sales of Treasury Bills should prove adequate for taking care of the Maturities. In the last few weeks, intermediate treasuries have been fetching precious little though it should be added that, in the current week, sales at the tap-rate came to a considerable amount and would appear to be mainly due to a big slice taken up by the Imperial Bank. The futility of increasing the attractiveness of the return on Treasury Bills must now be clear to the authorities. The high and higher rates offered on Treasuries have failed to induce the market to take more kindly to short-term Bills. This means that, far from there being any hope of increasing the floating debt beyond the Rs. 30 crores assumed in the budget, the problem of balancing sales and maturities should prove onerous. While this is likely to be the case, how are the Government to make the rupee payments against their sterling purchases? It may be that a portion will be found from the excess of revenue over expenditure, which is usual in February. Even so, we do not see how the short-fall in Government's cash balance in India can be got over except by a substantial increase in the ways and means borrowings from the Imperial Bank. Let it not be forgotten that any large ways and means outstandings at a time when Government's financial operations will be transferred from the Imperial Bank to the Reserve Bank (which is to be effected on April 1), must prove extremely embarassing. For all these reasons, there is no justification for frequent and frantic recourse to borrowings from the Imperial Bank. The straightforward course is to utilise the surplus sterling balances for the creation of currency.

* * *

When we turn to the conditions in the giltedge market, we are altogether mystified at the Government's attitude. One would have thought that the rise in government securities to a level at which hopes were engendered of the conversion of 3½ per cent. irredeemable paper into a 3 per cent. loan would be greatly welcome to the Government. This does not seem to be the case. To our knowledge, sales of over Rs. 2 crores of 3½ per cent. Rupee Paper and other securities have been effected by the Government and the Imperial Bank in recent week. At a time when market circles were imbued with a new confidence, the Government are deliberately damping enthusiasm and forcing prices down by the twin deflationary process of sales of securities by the authorities and of the non-utilisation of surplus sterling assets for currency expansion. If anything can be called suicidal folly, it is this attitude of the Government and bank authorities to giltedge prices.

Prices of commodities are just now showing a tendency towards recovery. At this juncture, everything possible ought to be done to facilitate and stimulate this process. We should consider that the stringency of money is entirely artificial and that the sole responsibility for this tight money phase must be laid at the doors of the authorities. If this artificial squeeze for funds were not there, commodities would have shown better response. The index number of wholesale prices in Calcutta for December stood at 88 compared to 89 in the summer of 1934 and 90 in the spring. This fall in the composite index has taken place in spite of a rise of eight points in jute from the low record of 36 and a rise of 12 points in cotton since the low in April. It is time that the authorities pay some attention to a more detailed and more understanding study of the movement in prices. The first result of such a study would be the determination on the part of the authorities to rid their monetary operations of the deflationary bias.

Looking to the money market developments in Lodon, the authorities have every reason to feel ashamed of their exploits in India. Here is the latest bit of news about Treasury Bills in London :

> "On the London market during the past week there was a glut of money seeking employment. This was strikingly illustrated by the fresh low record established by the issue of Treasury Bills, which were allotted on an average rate of 3s. 11d., per cent. thus breaking the low level, reached last November, of 4s. 9d., per cent."

The British Treasury has established a record for the lowest borrowing rate on short-term bills. The Indian Treasury has, at the corresponding time, built a resplendent record for clumsy and bungling tactics. We are always asked to judge Government actions by British standards ; we are repeatedly told that what is good for India is the British example. Why should not the Indian Government copy the British example of cheap money and low borrowing rate? In Britain, too, the tendency of the official monetary policy used to be deflationary so long as the Bank of England had all the say in the matter. Over the past two years, Mr. Montagu Norman has been put on the shelf. The Treasury is now dominated by departmental officials who have imagination and daring and who have brought about a situation in which it is not the city that dictates to the Treasury but the Treasury which has the entire control of the money market. Conditions are even more propitious for similar policies and similar actions in India. Will India's Finance Minister show equal pluck and understanding?

THE ASSEMBLY AND THE TRADE PACT

The Assembly debate on the Indo-British Trade Agreement has few surprises, unless one was too much used to the ways of the last Assembly to be prepared

for a Government defeat. The debate did not bring out any new point either for or against the Pact. But this is not necessarily a reflection on the level of the debate or on the ability with which each side presented its case. From all accounts, both the Commerce Member and the leaders of the Opposition spoke well and to great effect, though Mr. Jinnah's accusation of ignorance against Sir James Grigg was an unfortunate betrayal of his own ; for to speak of tea when protective duties in Britain are in question is inexcusable even in a mere politician. Sir Joseph Bhore could naturally do no more than present succinctly certain obvious lines of reasoning. He stressed the point, which *Indian Finance* was almost alone among Indian journals to admit, that the Pact only laid down in black and white certain principles which the Government of India had always followed in their fiscal policy. But he overlooked what we pointed out at the same time, that the new innovations which made the Pact more unacceptable than even otherwise it would have been. Sir Joseph Bhore, judging from the press reports, made much of the former and drew a sponge over the latter. It is unfortunate that there was hardly any one in the Opposition to force a clear statement on the question whether the Government of India had in the past instituted Tariff Board enquiries at the instance of foreign industrialists who are interested in the Indian market. It might be that, thanks to the innumerable ways by which the Secretary of State might bring pressure to bear on the Government of India, some of our Tariff Board enquiries were inspired by the needs of foreigners. But it is quite a different thing if they are to acquire a right under treaty to set the Tariff Board machinery in action whenever they choose. India cannot be asked to incur the expense and trouble of a protective enquiry to suit the convenience of foreigners. And it is strange that this provision in the Pact should have been overlooked alike by the Treasury and the Opposition members.

* * *

This omission necessarily means that the debate should have been on lines which any one, who had read the Pact carefully, could have predicted. Sir Joseph's main arguments were that the Pact changed nothing and that it was necessary to further the goodwill between the two countries. Neither of these arguments possesses any appeal to the members of the Opposition. The argument that the Pact is only a re-iteration of established principles obviously cuts both ways. As one of the members aptly pointed out, a government communique should have sufficed to reassure the British ; and if the elaborate formalities of a treaty were found to be necessary, the nationalist opposition has a great deal in recent history to induce the suspicion that the objective is very much more than one can see on the surface. Nor is it easy to command faith in the theory that this Pact would promote goodwill between the two countries. Mr. F. E. James referred to the suspicions that in the past had poisoned the relations of the two countries. We trust we shall not be misunderstood if we point out that, thanks to the tortuous course of the reforms and the reactionary measures of the J. P. C. with their elaborate safeguards, there is now far more of mistrust and suspicion than there ever was in the past. We wish Sir Joseph Bhore could carry conviction to the country when he said that there is not one national industry whose growth would be jeopardised by this Pact. The Commerce Member and his supporters asserted that protective duties, safeguarding duties and revenue duties were left untouched by the Pact. It is true that under the Pact His Majesty's Government recognise the requirements of the Government of India in these respects. And yet it was only the other day that the Iron and Steel Duties Bill virtually did away with the revenue duties for reasons of ill-conceived solicitude for British industry. Not the most rabid supporter of the Government can deny that, set in the proper sequence of our economic and political history, the Indo-British Pact is calculated to arouse grave disquiet in the public mind. The Assembly

* * *

That the vote of the Assembly will not alter the fate of the Pact, no one can overlook. The value of the debate only lies in giving point to the protests which were made from various quarters during the last two months. The Government would be ill-advised to treat the Assembly vote as a harmless expression of opinion which leaves them untouched. If it is true that His Majesty's Government seek no more than the advantage of legitimate differential duties based on differential costs, they have nothing to lose by agreeing with the Government of India to treat the Pact as null and void. In fact, the two countries have a great deal to gain by the adoption of such a course. Britain would for once disarm the suspicion that His Majesty's Government always force on the Government of India whatever one-sided agreement they want and that they seek to manipulate India's fiscal policy to suit the interests of British industry. It is time that the tradition of indifference to the popular verdict is broken ; and a reversal where, admittedly, so little is involved, should be easy to carry out. It is to be hoped that the Government would agree to abide by the verdict of the Assembly.

THE INFECTIOUS NEW DEAL

Despite all our passionate clinging to the old, the infection of new ideas has always been hard to resist. Mr. Roosevelt inaugurated his New Deal not two years ago under the open jeering of his confreres in other nations ; and even today there are many in Britain who love to insist that recovery in Britain is a healthy and deep-rooted sapling compared to the hot house plants of Roosevelt's rearing. And yet before Mr. Roosevelt could celebrate the second anniversary of his recovery programme, Britain and France are laying at his feet the sincerest form of flattery. France and Britain are alike exercising their minds over the formulation of a New Deal specially suited to the circumstances of each country. The former, as readers of *Indian Finance* are well aware, has definitely turned her back on her deflationary policy—which, in the circumstances of her economy and that of the world at large, is the most diabolical form of *laissez faire* one can imagine—and has formulated a plan which reminds us of Mr. Roosevelt at every point. In Britain the National Government is still wedded to a policy which can be stated, if at all, only in the form of a number of isolated measures lacking in co-ordination or even the basis of a fundamental principle. But public opinion is being fast disillusioned about the efficacy of tariffs and trade pacts ; and there is a growing conviction that the health of the national economy cannot be assured by making money a perpetual drug in the market. The successive failures of the Government in the various bye elections are virtually a call to the opposition parties to get ready with rival plans and policies. Labour, by virtue of its representing an altogether different scheme of society and social relations, has always had its plan; and its task now is more to bring it in tune with the state of public opinion than to determine its underlying principles. It is, therefore, only to Liberalism that the present situation offers the wistful hope of impressing the public mind with a programme which will appeal to the disillusioned supporters of the National Government and the waverers amongst the Laborites. Mr. Lloyd George has, therefore, come out with his "New Deal" and one may be sure that he will succeed in rivetting public attention for some time at least on his campaign.

* * *

The outlines of Mr. Lloyd George's scheme are given in our Overseas Columns this week ; and it is significant that the details cannot be filled in, as Mr. Lloyd George himself has not furnished any and, apparently, cannot. His speech inaugurating the campaign lacks none of the qualities of his oratory, and not, at any rate, those remarkably well-aimed arrows before which his political adversaries have always quailed. The Bank of England is the unfortunate target on this ocasion ; and though one might regret the poisoned tip of Mr. Lloyd George's darts, few will demur to his accusation that the advice of the Bank has cost the nation a great deal in money and human suffering. But one wonders whether after all these forensic attacks on the Bank are not a mere stunt ; for Mr. Lloyd George's proposals for the re-organisation of the Bank do not touch the core of the problem. Nor would his scheme of public works and revision of tariffs suffice to recreate a new economy or bring back to the present the prosperity of former times. For there is almost a confession that the country must be content to regard a million unemployed as a permanent feature of the national economy. No one in Britain can be so sanguine as to believe that international trade, on which Britain is so much dependent, can expand to the point at which alone British industry can reabsorb all the unemployed. Nor can one believe that any national scheme of recovery can provide for full employment at the present standard of living. But the latter question must be faced, if it is to be answered. No scheme could properly be called a New Deal, which does not recognise the right of every worker to stable employment in place of either idle starvation or state-aid in any form.

* * *

Mr. Lloyd George has borrowed the terminology of the Roosevelt Revolution without seeking to understand its idealogy. The right to divide the available work and thus provide for its expansion through the stimulation of consumptive demand is the core and centre of the New Deal in America. The other measures are ancillary to this purpose of assuring the American citizen of this fundamental right. It was guaranteed by the American constitution which describes it as the right to life, liberty and the pursuit of happiness. And what life is it and what liberty and happiness can there be when millions are fed practically throughout life with doles from the State? The new deal is nothing if not a change of heart towards those sections of society which have not so far had a fair deal. Mr. Lloyd George has failed to catch the true meaning of the Roosevelt Revolution; and his failure will necessarily strengthen the cause of Labour in the country.

NEW TAXES FOR BENGAL

Compared to the Hallet Circular, the fact that the Bengal Government were considering several new taxation proposals was only a thinly concealed secret and the Government set all speculations and doubts at rest by issuing a *communique* on the subject on January 28. A certain leakage in the press probably cut short the period of incubation and forced the hands of Government. The first part of the *communique* is devoted to the reasons which led an unwilling and benevolent Government to the painful necessity of increasing the burden of taxation. It refers to the budget speech of the Finance Member of the Government of India, in which he grudgingly proposed the grant of 50 per cent. of the export duty on jute to Bengal under certain conditions. The condition was that the Bengal Government and Legislature should do all that is possible to help themselves. This, the Government *communique* claims, the Government have done. Between 1929-30 and 1933-34 a reduction of Rs. 94¾ lakhs was effected in the expenditure on revenue account; and "since then rules have been issued revising the scales of pay for the large majority of the services and posts under the rule-making power of the local Government, and their effect will be a saving eventually of approximately Rs. 45 lakhs per annum."

* * *

Still the budgetary position of the Bengal Government is as bad as ever; and the fateful 2 crore mark is looming large once more on the deficit side of the next budget. The Government, therefore, have felt constrained to propose that the following measures be placed before the Legislature for the purpose of increasing the provincial revenue.

	Estimated yield in a full year. Rs.
(*a*) The Bengal Electricity Duty Bills, 1935	10 lakhs.
(*b*) The Bengal Tobacco (Sales Licensing) Bill, 1935	5 ,,
(*c*) The Court Fees (Bengal Amendment) Bill, 1935	3½ ,,
(*d*) The Indian Stamp (Bengal Amendment) Bill, 1935	4 ,,
(*e*) The Bengal Amusements Tax (Amendment) Bill, 1935 ...	2 ,,
Total ...	24½ ,,

The Government have sought to justify the measures on the ground that similar taxes are in force in other provinces especially in Bombay and that they impose no further charge on the resources of the really poor man.

* * *

We concede that taxation, when every other resource fails, is a necessity to prevent the financial situation of a country from getting completely out of hand. And there can also be no doubt about the fact that the crescendo of deficits in Bengal's budget calls for immediate action. But we are by no means convinced that, while every ounce of blood has been drained from middle classes and from the poor, the axe has been sufficiently freely used on a top-heavy administration. Although the Government claims that the measures proposed will not further cripple the poor man, the incidence of some of these taxes, for instance the tax on electric energy, will be high in the case of the middle class householder, who is one of the most distressed in a province of distressed citizens. Compared to a citizen of Bengal his confrere in the same stratum of society in Bombay is affluent and what was not resented in Bombay may prove to be a serious burden in Bengal.

* * *

Besides, the total relief sought to be effected is only Rs. 24½ lakhs, a very small fraction of the total deficit. A five-barrelled engine that effects such a small gain can hardly be justified in a country where the people are notoriously over-taxed and where a hydra-headed monster of a 2-crore deficit refuses to be dislodged from the budget.

POSITION AND OUTLOOK OF JUTE INDUSTRY

Mr. H. H. Burns has fulfilled the hope, which he had encouraged in the past, that at the annual meeting of the Indian Jute Mills' Association he would afford the public a succinct survey of the affairs of the jute industry. In former years, his speeches evoked varying comments, as he had to deal with matters which were the centre of controversy. The jute industry has during the last few years been beset with many problems about the treatment of which no large measure of agreement had been secured. First, the question of restriction of production in the jute mills, then the reduction of the output of raw material, these have been a bone of contention successively. And there has been at the same time the vexed question of the futures market. It was, therefore, idle to expect any speech to meet with alround applause. But Mr. Burns has always scored in the ability with which he presents the facts relating to the jute industry; and on this occasion he must have felt happy to contemplate that the problems, which had either created dissensions among the jute mills or set the jute industry against certain sections of the jute trade or the public at large, have been settled. The restriction agreement between the Association and the non-Association mills has worked smoothly. The problem of the futures market has also been set at rest by the provision enabling the

various sections of the jute trade to have a measure of control over the East India Jute Association Ltd. Restriction of jute has gone far past the stage of controversy. The Government of Bengal have woke up to the importance of restriction to the economic welfare of the whole province and the financial stability of the Government itself. Though they have not seen their way to formulate a scheme of compulsory or quasi-compulsory restriction, they have successfully overcome the scepticism regarding the efficiency of voluntary restriction and raised popular enthusiasm in support of their scheme. And lastly they have demonstrated their *bona fides* by recommending a liberal measure of restriction which is even more than some of the representatives of the cultivators had asked for. The jute markets, too have of late worn a buoyant look; and the spokesman of the Indian jute mill industry has, therefore, no reason to look either depressed or aggressive.

* * *

While one can feel thankful for such improvement as there has been, one cannot absolve one's self of the duty of looking into the present for sources of dissatisfaction or to look ahead for those points which call for caution. Mr. Burns has done well to take upon himself the discharge of both these functions. In doing so he has to deal with the three principal problems, restriction of the mill output, restriction of the raw material, and the need for scientific investigation of potentialities. So far as the first is concerned, Mr. Burns stressed the need for regulating the activities of mills which are not parties to the Restriction Agreement, which was concluded at the instance of H. E. Sir John Anderson between the association and the non-Association mills. At first sight, it might seen that this plea of the Indian jute mills is unfair to new entrants; and, in a sense, it, no doubt, is. The idea of such regulation is also foreign to the traditions of the jute mill industry. But in the present times, it is futile to kick against the need for regulation. In former times it seemed quite fair that each industry should stand or fall by its own efforts, and that the door should be aways open for new entrants and that, if certain sections of industry wanted restriction, they ought to be prepared to pay the price for it. But the essential difference now is that restriction is wanted as much in the larger public interest as in the interest of the industry itself. The State takes such a large initiative in the formulation of restriction schemes that it ought to recognise its duty to guarantee to the industry the legitimate profits of such restriction. It would be illogical to deny the justice of the Indian Jute Mills' Association that, what time they are practising restriction, others should not be wholly free to add not only to the output but also to their productive capacity.

* * *

On the question of restriction of jute, Mr. Burns leaves some unfortunate traces of the instinctive opposition of jute mills to the reduction in acreage. He expresses the view that in deciding to recommend a 5 annas reduction Government have taken into account the necessity for some allowance for a margin of error. This is a naive expression of hope that the actual extent of reduction will prove to be appreciably less than 5 annas. There is no doubt that most of those, who have advocated a 30 per cent. reduction, wanted to provide for the possibility of evasion and for defections on the part of the other jute-growing provinces. While this is quite understandable, it seems unreasonable to suggest that a reduction of 30 per cent. involves the dangers of consumers turning to substitutes. Mr. Burns must know that this cry of "wolf" has been raised so often, and so many more times than in the old fable, that one feels that there is hardly any wolf at all in the neighbourhood. Even if the danger of substitution is real, it is distinctly remote; and the working of the present restriction scheme is well within the limits of safety.

Nevertheless, the jute industry can ill afford to lull itself into a false sense of security. Even in the present conditions the competition of foreign mills is far from inconsiderable. The question whether foreign mills have increased in number and capacity was some time ago a matter of doubt. But it is certain that raw jute has been exported in increasing quantities. A point which has some bearing on this is that hessian cloth has to bear export duties approximately Rs. 6-9 per ton higher than those borne by raw jute and that such a disparity between the rates of export tax on the raw material and the manufactured article lays a heavy burden on the industry. To this contention of the Jute Mills the Government reply that when the exports of sacking and hessian are approximately equal in tonnage the existing rates of export duty on on raw jute, hessians and sackings are such that the average rate of duty paid by manufactured jute goods would be approximately equal to the rate payable on raw jute. Government also pointed out that when, as had been the case in the last three years, the exports of sacking considerably exceed the exports of hessians, there is in fact a slight margin in favour of the manufactured goods in that the average rate of duty on the whole quantity of manufactured goods is then slightly below the rate payable on the raw material. The difference between the mills and the Government have not so far been narrowed; but it is necessary that the burden on the industry should be lightened.

* * *

The most important point in the long view is the institution of scientific research in matters of interest to the jute mills. Here the report of Dr. Barker who enquired into this question is of great importance. The principal difficulty is the peculiar isolation of the industry away from other great manufacturing industries, its unique concentration, and the distance existing between its consumers, as also technical and scientific bodies in allied pursuits, from Bengal. The resulting insularity demands a form of wider information and commercial and technical intelligence service than has hitherto been necessary. What is heartening is that Dr. Barker is convinced that jute presents a virgin field for the exploration of the industrial scientist, and for exploitation by the commercial man as the result of the former's work. It is to be hoped that the era of comparative prosperity, which, by all tokens, is now before the jute mill industry, will enable it to realise these potentialities.

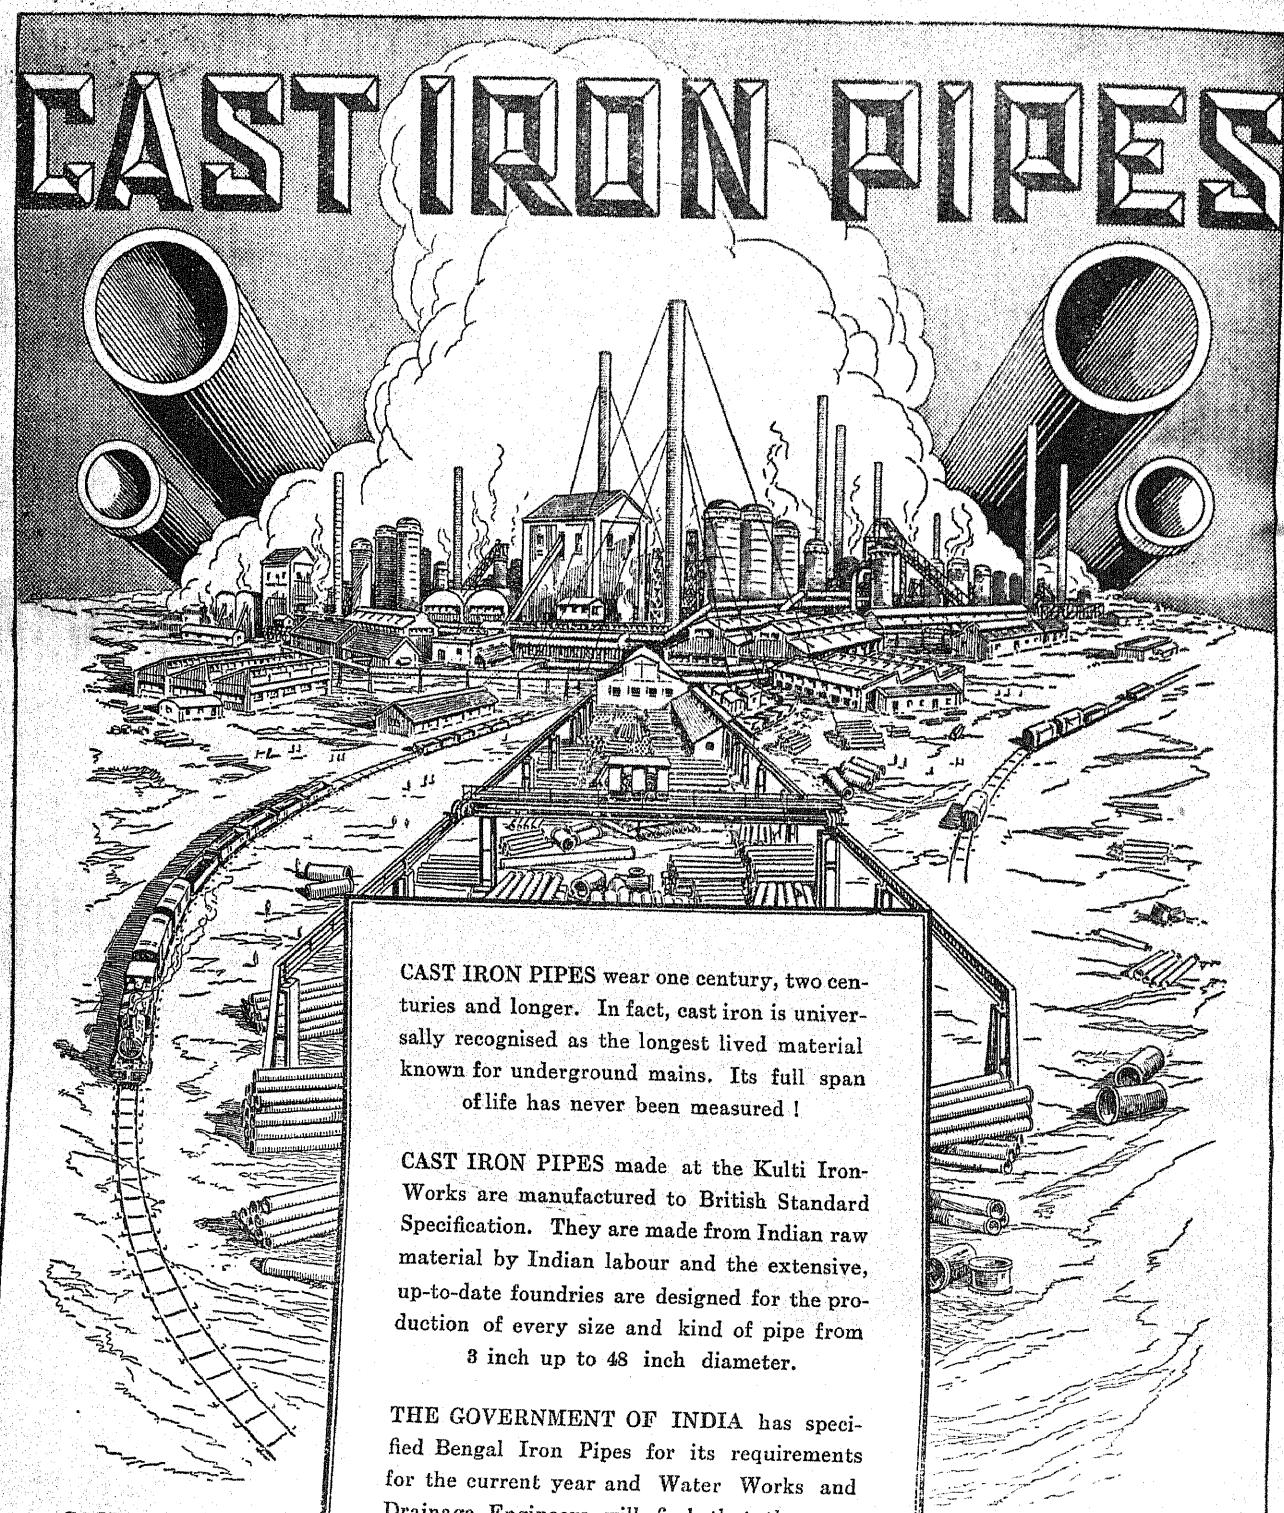
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they can obtain all their needs from the same source.

CAST IRON :
Manhole Covers ;
Surface Boxes ;
Sluice Gates ;
Gully Traps ;
Bollards ;
Sleepers ;
Culverts ;
Water Cranes ;
Chairs ,
Spur Wheels ;
Bearing Plates ;
Firebars ;

CAST IRON :
Fencing Posts ;
Lamp Posts ;

Indian Finance feels exultant, this week, on completing seven years and entering its eighth. And age has chid us to be restrained. But the poet does not record if the platitudes of Polonius did influence the life and conduct of young Laertes. May be, the birthday convivialities of advancing age must be marked by decorum. The older you are, the longer is your past; and the contemplation of the past suggests discreetness rather than fervour, caution more than zest. Few—oh, how few!—can afford to shout about their past from the house-tops. The reminiscent mood is, therefore, the restrained mood. *Indian Finance* has but a brief past, can hardly indulge in the luxury of reminiscences, and needs, therefore, feel no special urge for self-discipline. To us, it is not the past that matters; all the thrill and romance is in the future. We do not harp on the "good old days;" ours is the lyric on the brave world that is dawning. Not the spirit of Il Penseroso but the spirit of L'Allegro animates us. We are not wistful of yesterday but hopeful of to-morrow. Where there is hope, there is confidence; and where there is confidence, there is faith in one's mission, lustiness in one's expression and, yea, recklessness in one's resolves. Every birthday has, therefore, come to be associated, in our case, with mightier resolutions, more grandiose plans and more foolhardy aspirations. Every day, in every way, to be better and better has ever been our ambition. To be progressive all the time and from all view-points, and to fashion to-morrow's plans to-day and keep anticipating the morrow every day of one's life is a strain and a hazard which only the spirit of youngness will voluntarily and cheerfully court. Ours has been a strenuous and hazardous career; but we would not have it otherwise. The garrulity of old age may be boring; but the strident voice of young and restless ambition must find an echo in every heart that is not crabbed or knotted.

It has, therefore, been our constant aim and vigilant care to make *Indian Finance,* and keep it, a symbol of all that is vivacious, exultant, daring, versatile and lusty. Every other consideration has yielded place to this supreme objective. To our recurrent discomfort, we have scorned worldly gain. To the framers of our own little budget, we have been a perpetual embarassment and frequent agony. We have planned developments beyond our means. The new features of *Indian Finance*—and, every year, there have been new and newer features—have entailed expenditure long ahead of the revenue they might induce. But, as I said, the idea of wordly gain has been wholly foreign to its inception and in its growth. When we launched this venture,, the woful ignorance of our public on financial and economic questions and the sad lack of a healthy and well-informed public opinion on these matters furnished the urge and motive that *Indian Finance* should secure to men and women, the businessmen and the laymen, the means of knowledge in public finance and economics. We have felt this to be our mission; but we have not done so in any spirit of conceit or arrogance. We have never pretended that we are better than others; but we have been anxious to do our duty; and, if so, we think we have a right to call on others—whether government or governed, whether Indian or European, whether vested interests or otherwise—to do theirs. As I have stated on more than one occasion, while I cannot be sure if *Indian Finance* has educated its readers, the conducting of it has certainly educated us, its staff, so much so that I have often looked back on the poor equipment I had when I started it, and been amazed at my own conceit in behaving myself worthy of the mission I had undertaken. "He that is greatest amongst you, let him be your servant"—and we have worked in the belief that we have aught to learn from every "one of the least of these my little ones". *Indian Finance* has, thus, been a co-operative educational endeavour in which the producers and the consumers have together grown 'more and more'.

All of us have been keen learners. We have never, thank God, suffered from the complacency of the learned. In this reciprocal fervour, we, who are in charge of *Indian Finance,* have tried, might and main, to widen our knowledge, to expand the sources of information and to broaden the outlook; and you, who scan and study the weekly issues with care and love, have grown larger in number, surer in understanding and more eager in the quest for knowledge. Result? A happy Indian finance Family. An increasingly authoritative Indian Finance School of Thought.

Believe me, I say it in all sincerity and in profound gratefulness, it is the affection and regard of our readers which has made molehills of the mountains of difficulties we have encountered in our way, and which has, despite handicaps too numerous to mention, enabled us to plan progressive programmes in happy continuity and with gratifying results. The plans for the eighth year are even more ambitious than those of earlier years. During my recent and my first) stay in London, I was fortunate in securing the co-operation of some of the noted writers of international status; and there will be, as from this issue, four new features under the charge of four of the best known financial journalists of Fleet Street. Dr. Paul Einzig, author of over a dozen books which have won recognition all over the world, is now our Lombard Street Editor and will contribute a regular page on the outstanding international event of the week. Mr. Francis Williams, the youngest City Editor in London in charge of the financial page of the *Herald,* the daily with the biggest circulation

FOR CAPITALISTS
BIG AND SMALL

THE INDUSTRY WITH ASSURED PROFIT

Mr. G. S. BLACKBURN of the world-renowned Blackburn Hosiery Machines is on a visit to India.

He stays at 310 & 312, Great Eastern Hotel, Calcutta, till February 7.

Capitalists, big and small, desirous of setting up Hosiery Factories are invited to see him by appointment.

Here are five reasons why your choice should fall on Blackburn machines :—

(1) The largest hosiery plants in India are entirely equipped with Blackburn machines,

(2) Three-fourths of Indian-made under-wear are produced on Blackburn machines.

(3) Largest varieties of hosiery goods both for summer and winter can be produced on one and the same machine.

(4) Complete erection of Hosiery Factories is undertaken.

(5) Regular technical service after installation is offered.

H. G. MISRA,
(Sole Agent for India),
Civil Lines,
CAWNPORE.

(over two millions) in the United Kingdom, is our City Editor and his page will prove the tersest and most penetrating commentary on city trends and events. The London Stock Exchange affairs are in charge of Mr. R. Gordon Cummings of the *Daily Herald,* who, himself a chartered accountant, has the largest experience and most unbiassed judgment of British Joint stock enterprises. A New York Stock Exchange review will be contributed by Mr. F. Rocke, who has made this his speciality and who has trained himself to a calm appreciation of American events in a period marked by puzzling convulsions.

The articles of Dr. Einzig and Mr. Williams will appear in the main issue. Those of Mr. Cummings and Mr. F. Rocke are part of the plan to widen the scope of the *Investors Supplement* and make it more helpful to investors not only in India but in England and America.

At this stage, it is necessary to explain my intentions and plans regarding the *Investor's Supplement.* In my fitful London letters of somewhat thin substance, I had referred to the growing volume of mutual business between the London and the Indian Stock Exchanges. It was, at that time, a little seed sown by enterprising and far-seeing people like Mr. A. D. Shroff. It is now a healthy and rapidly growing plant. More than half a dozen brokers of leading and authority in London are now giving increasing prominence to Indian companies in their periodical circulars to their clients. I will go so far as to hazard a guess that, in the last few months, British investors and investment institutions have put out anything like £5 million in selected rupee securities and stocks. On this side, there is a growing vogue for investment in assorted British securities ; and the clients, who have had enterprise enough to turn their attention to overseas investments, have had luck enough to reap handsome profits. The revival of British interest in Indian securities and the inauguration of Indian interest in British securities have been under the most favourable auspices. By a curious coincidence, the stock exchanges in London and in India have been uniformly favourable to investors, especially in the past half year. Those who have already been wooed to this business are in the mood to go further with this interesting and fruitful experiment. Calcutta has sadly lagged behind in this movement. But Bombay is quite keen ; and firms like Messrs. Batlivala and Karani enjoy a considerable turnover in this kind of reciprocal business in Rupee, Sterling and Dollar stocks ; and they maintain an efficient staff and up-to-date intelligent service for the new task that they have undertaken. The Investment Trust Company sponsored by Sir Kikabhai Premchand has also played an important part in popularising transactions in rupee securities in London and in sterling securities at this end.

This interchange of business between London and India and between India and New York is, therefore, a definite fact of even greater promise for the future. The *Investor's Supplement* is designed, and is being expanded, to answer the needs of this new situation. Its aim will be to instruct overseas investors in the fortunes and doings of Indian companies , and to instruct Indian investors as regards worth-while investments in London and New York.

Towards this end, we shall present complete reviews of the three leading stock exchanges of India ; the accounts of rupee companies will be analysed in detail, comparative figures for three balance sheets being given as far as possible. The new feature, "Worth While Investments," will contain the study of one Indian company per week. So far as the London stock exchange is concerned, Mr. Cummings will furnish a weekly review ; he will also discuss "Worth While Investments" in relation to British companies ; he will, in a third article, deal with the affairs of sterling companies which have their operations in India. The New York Stock Exchange review should prove of special value as the biggest yield is available to-day on some of the dollar stocks of companies which have, even in these troublous times, maintained a good dividend record. It is our intention to add, as early as practicable, a Dollar "Worth While Investment."

A good few friends have been curious to know whether my mission to London has succeeded and what my achievement was during my foreign tour. My mission to London was to secure for *Indian Finance* a recognition even outside of India. This was my aim as I conceived it. And, on my return, I am happy to be able to report that my mission has been a hundred per cent. success. I can, I venture to think, claim that London now realises that India can produce a financial paper worthy of the best Fleet Street standard. I had no more aspiration. I had no less an aspiration either. As for my achievement, I secured contacts with reputed thinkers and writers, and with most men who count in the financial word. But no contracts from advertisers! (Cries of "shame" from *Indian Finance* management). The copy book maxim has taught us from early years that honesty pays. From the early years of *Indian Finance,* I have learnt to feel that contacts pay more than contracts. For my part, I am quite bucked up about my achievement in this regard.

Back at my old post and breathing the beloved Clive Street air, I may conclude to-day's gossip with the assurance that I am, once again, at your continued service.

FIFTY-SEVENTH REPORT.

To be submitted to the Shareholders at the Ordinary General Meeting to be held at the Registered Office of the Bank, Oriental Buildings, Bombay, on Thursday, the 14th February, 1935, at 3 o'clock p.m. (S. T.)

Directors' Report for the year ended 31st December, 1934.

The Directors beg to submit to the Shareholders the BALANCE SHEET and PROFIT and LOSS ACCOUNT for the year ended 31st December, 1934. The Auditors' Report is also annexed.

	Rs.	A.	P.
The transactions for the past year, including the balance brought forward from the previous year Rs. 4,32,014-6-11 have resulted in a profit of	21,96,674	3	2
An ad-interim dividend was paid for the half-year ended 30th June, 1934, at the rate of 10 per cent. per annum, which absorbed	5,00,000	0	0
Provision made for Income-Tax and Super-Tax for the year	2,00,000	0	0
Bonus to Staff	76,000	0	0
The Directors now propose :—			
To pay a final dividend for the half-year ended 31st December, 1934, at the rate of 10 per cent. per annum, on the Paid-up Capital of 100 lacs free of Income-Tax which will absorb	5,00,000	0	0
To place to Bank's Property account	1,50,000	0	0
To place to the Bank's Reserve Fund	2,50,000	0	0
To carry forward to the next account	5,20,674	3	2
Total	21,96,674	3	2

The business of the Bank during the year under review was satisfactory, the Bank's funds being well employed at reasonable rates of interest.

The Official Bank Rate remained unchanged during the year at 3½%.

A Branch of the Bank was opened at Hughes Road, Malabar Hill, on 4th November last, and new Branches will be opened in the near future at Nagpur and Kalbadevi Road, Bombay.

BALANCE SHEET as at 31st December, 1934.

CALCUTTA

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, Thursday, January 31.

The Delhi Agreement has failed to quell completely the trouble in the textile industry. This is an ominous sign, because in the past, Gandhiji's has always been the final word in any industrial dispute in Bombay. This recalcitrance has probably been fomented by the Socialist group which has, of late, come into prominence in Labour circles. The Socialists denounced the Delhi Agreement almost before the terms became public. And now they are trying to foment trouble within the industry on a large scale. Labourers in several mills have already downed tools as a protest against the terms of the Agreement, specially against the cut of 6¼ per cent. due to the reduction in the hours of work. The Labour Association at Ahmedabad, however, completely approved of the Delhi Agreement, and they have been trying to explain the true implications of the terms. In a statement issued by the Secretary of the Labour Association, Ahmedabad, it is stated that the settlement leaves the workers in Ahmedabad mills very considerably better off than similar workers in other centres of the industry in this country, which is in a way an indication of the serious set-back experienced in recent times by the workers in those places.

The fixation of a minimum below which the reduction will not apply to weavers is a step in the direction of a more equitable adjustment of wages, while the minimum of Rs. 41-4-0, taking the average earnings of the last six months on the ten hours' basis, compares favourably with the average earnings of weavers in other centres.

Notwithstanding such efforts on the part of the Labour Association, workers in several mills have already gone on strike. The Waste Cotton Mill, the Anand Mill, the Laxmi Mill, the Vijay Mill, and the Kalyan Mill are all in the list of the anti-Delhi-Agreement group, and there is a prospect of the strike spreading to the whole of the textile area. The Ashok, Govardhan, New Commercial, Hemabhapi. Marsden, Mongram, Ahmedabad Cotton Vivekanand and Lall Mills are all closed as a result of the unrest amongst the labourers. It has also been observed that labour disputes in the textile area have of late a tendency to develop an ugly phase in a short time. And there are already signs of rowdyism amongst the labourers. Stones and brickbats are so far the weapons used and the gates of some mills were smashed by the strikers. In fact, the situation was grave enough for the District Magistrate to issue an order banning assemblies within the Municipal limits of Ahmedabad. It is apparent from all this that the trouble is more deep-seated than one would suppose. And unless a complete change comes over either the millworkers on the millowners, a change of heart in the words of Gandhiji, the trouble will keep smouldering for a long time to come. Efforts are going on to make permanent arrangement for settling future disputes between capital and labour in Ahmedabad.

A joint committee consisting of representatives of millowners and labour, namely, Messrs. Chimanlal Parekh, Kasturbhai Lalbhai, Sakerlal Balabhai, Nursinghbhai Ansuyaben, Shankerlal Banker, Gulzarilal Nanda and Khandubhai Desai, has been appointed to deal with disputes arising out of the Delhi agreement.

A meeting of the Millowners' Association was held to-day when difficulties arising out of the working of the Delhi Agreement were discussed and solved.

Let us hope that a flourishing industry like the textile industry of Bombay will not be allowed to be attenuated owing to the ceaseless and often senseless disputes between capital and labour.

This state of affairs is all the more unfortunate because the outlook of the Bombay Cotton Mill industry for the year 1935 is distinctly bright. In fact, it may be said to be brighter than at any time during the post-war period. When in the latter part of 1933 a sequence of ruinous strikes led to a big drop in prices and an accumulation of stocks and eventually to the closing of the Currimbhoy group it was thought that the textile industry of Bombay was doomed. It it true that there has been a recrudescence of labour troubles from time to time ; but the improved demand brought about a complete change in the prospects.

Before the strike last year there were only 52 or 53 mills working, while to-day the number working is 60. Then, whereas last year the average number of operatives employed was 95,000, the number now is 130,000, and there is a prospect of further employment for it is at least possible that three of the closed mills may be re-opened for production.

At the same time the important fact is to be noted that cotton prices have advanced considerably. For instance, whereas last year the price per candy was about Rs. 200, to-day the figure is about Rs. 238 and the premium for staple cotton has also increased.

It is a pity that labour troubles should continue to be present when the prospects of a return to prosperity are by no means dim.

The other question which has been troubling the mill authorities of Bombay of late and to which I alluded last week, namely, the possibility of overproduction, is still a debatable point. While all are agreed that over-production is an evil to be avoided, opinion is divided as to the manner in which this is to be achieved. The question of double shifts, for instance, is not one regarding which there is a concensus of opinion. Mr. S. H. Batliwala thinks that the goal of textile industry should be a basis of permanent nightwork in the mills. Although his arguments are not unanswerable, there is yet a great deal of sense in what he says.

"The idea is that double shift operations by existing mills should as far as possible take the place of installation of new plants in the future, so that ultimately this industry will be established on a permanent night work basis. In higher production entailing lower manufacturing costs lies the salvation of each unit of the industry in the race for competition with the Far Eastern manufacturers who have flooded this country with cheap goods produced by day and night operations.

Neither rhyme nor reason can be assigned to the plea that in order to secure better prices through a smaller output our mills should on no account resort to working by double shifts. This method has perpetuated less profits and dearer level of prices to the detriment of both the manufacturer and the consumer.

No doubt, more wastage and a larger proportion of "seconds" have to be allowed for at night in the case of the more difficult and more complicated sorts woven on some of the looms. Still, had the great possibilities arising from double shift operations been systematically exploited years ago, this industry would now have been permanently well off. It is therefore imperative that through unity among millowners a gradually progressive scheme for double output should be initiated forthwith.

The future will show what turn for better or for worse the industry will take as a result of action on the part of the mill authorities.

Bombay has received a visit from a small party of industrialists from Central Europe, many of them well-known personalities in the commercial life of Austria and Czeckoslavakia. The party is trying to explore the possibilities of improving trade relations between India and Central Europe. They will stay in this country for four weeks altogether and visit several important centres of business and survey the present trade conditions in India. They intend also to go to Delhi and discuss certain trade problems with prominent officials. Strangely enough, an

PROSPECTUS

Objects.—This Bank is started with the object of carrying on Banking business of all kinds. It cannot be denied that in a vast country like India there is ample scope for many more banks of the right type to serve the needs of the industrial and commercial interests and the investing public. On the other hand, compared to the other advanced countries of the west it may be truly said that India is still in its infancy as regards full banking facilities and there is great necessity for several banks big and small. Though our country has had numerous individual and private banking enterprises, the need for joint stock banks controlled by the shareholding public and instilling trust and confidence by their public nature, is not only great but modern business conditions demand such institutions also. There is immense scope for more public banks of the right type, conducted on modern and scientific lines conducive to the growth and development of the industrial, agricultural and commercial interests of the country. It will readily be conceded that the present is a most opportune time to start a banking enterprise of this kind, for, money is lying idle for want of sound and safe opening. Further it is advantageous and better to start the bank now so that the foundations may be well laid for the future prosperous times. The country is just emerging from the throes of world economic depresson and signs of resuscitation are seen on all sides. Money is there in plenty bearing little fruit or interest and this is perhaps the best moment for reliable banks to be started which will mobilise the financial resources and turn them to fruitful channels of production and increase. This bank, though starting on a modest scale, proposes with the aid and co-operation of the investing public to slowly but surely extend its activities and usefulness to the country on all up-to-date lines of banking, besides, offering a safe investment to the public. The main guiding principle of this bank will be to make itself useful to trade, commerce, and industry and the public in general consistent with the highest degree of safety. There can be no surer guarantee of its success, safety and usefulness than its strong Board of Directors, composed of people of eminent reputation and its Managing Director, Mr. Narayandas Girdhardas (of the well-known Khoosaldas family of South India) whose name is familiar in South Indian business and commercial circles and who has had contact with and experience of Banking for a considerable time.

Capital.—The authorised capital of the Bank is Rs. 20,00,000 divided into 40,000 shares of Rs. 50/- each the whole of which are now offered for subscription.

Minimum Subscription.—The Minimum subscription upon which the Directors may proceed to allotment is one hundred shares. As more than that number of shares has already been subscribed for, the Directors will proceed to allotment immediately. Twenty thousand shares of the aggregate value of Rs. 10,00,000 have been underwritten by Mr. Narayandas Girdhardas, for a commission at the maximum rate of 2 per cent. on the face value of the shares as provided by the Articles of Association and such commission is payable by the Bank to the underwriter.

Allotment of Shares.—Where no allotment is made, the deposit will be returned in full. Where the number of shares allotted is less than the number applied for, the surplus will be credited in reduction of the amount payable on allotment and the balance, if any, will be returned to the applicant. The Directors reserve the right to refuse any application without assigning any reason.

Management.—Mr. Narayandas Girdhardas is appointed Managing Director of the Bank on terms and conditions set out in the agrement to be entered into betwen him and the Bank and referred to hereunder.

Agreements.—The following agreements will be entered into :—

Agreement referred to in Clause III (gg), and Clause VII of the Memorandum of Association of the Bank and identified by Mr. U. Ramachandran, Advocate, Madras, whereby Mr. Narayandas Girdhardas is appointed Managing Director of the Bank on the terms set out therein. Under the agreement the Managing Director shall not be entitled to any monthly allowance if the net profits earned by the Bank in any year fall below 6 per cent. on the paid-up capital. In addition to the allowance referred to in the agreement, the Managing Director is to be entitled to a commission on the net profits on a graded scale of from 5 per cent. to a maximum of 10 per cent. The Managing Director shall not be entitled to any commission if the net profits of the Bank in any year fall below Rs. 20,000.

Contract between the Bank and Mr. Narayandas Gidhardas whereby Mr. Narayandas Girdhardas has under-written 20,000 shares of the Bank out of the shares now offered for subscription and whereby Mr. Narayandas Girdhardas is entitled to the Commission thereon at 2 per cent. on the face value of the shares.

Full particulars regarding the remuneration of the Managing Director and other conditions of the draft agreement and of the underwriting contract are set forth in the draft agreement and in the underwriting contract which can be inspected at the Registered office of the Bank on any working day between 11 a.m. and 3 p.m.

Directors' Qualifications and Remuneration.—The Articles of Association provide that the qualification of a Director is to be the holding of 50 shares in the Company, and that each Director shall be entitled to a sitting fee not exceeding Rs. 25 for every meeting of the Board that he attends together with such travelling allowance and such further sum or remuneration as the Company in General meeting may grant and that such remuneration is to be divided among them in such proportions as the Directors may determine.

The remuneration of the Managing Director shall be as provided for in the agreement referred to supra.

Nature and Extent of Directors' Interest.—No Directors other than the Managing Director, Mr. Narayandas Girdhardas, are interested financially in any way whatsoever in the promotion of the Company except as holders of shares and to the extent to which they are entitled to remuneration as preovided for in the Articles of Association of the Bank.

Voting Rights.—On a show of hands every shareholder present in person and holding not less than 5 shares shall

have one vote and upon a poll every shareholder present in person or by proxy have votes as under:—

5 Shares to 10 Shares—One Vote.
10 Shares to 25 Shares—Two Votes.
25 Shares to 50 Shares—Three Votes.

Above 50 shares one vote for every 50 shares but no member shall have more than 50 votes in the maximum.

Preliminary Expenses.—Preliminary expenses are payable by the Bank and are inclusive of all expenses incidental to the formation, flotation, and incorporation of the Bank and also include the travelling and other expenses incurred for the promotion of the Bank (excluding all brokerage, commission, or under-writing charges payable to brokers, commission agents or underwriters for securing subscribers for shares of the Bank).

The preliminary expenses are fixed at Rs. 7,500-0-0 and are payable to Mr. Narayandas Girdhardas, the promoter and Managing Director of the Bank.

Commission and Brokerage.—The Articles provide for payment of commission not exceeding 2 per cent. on the face value of shares to be subscribed. The Company will pay a brokerage of annas 8 (Eight annas) per share on all allotements made in respect of application bearing recognised Brokers' stamps and on all allotments made as the result of canvassing by approved agents.

Issue of Certificates.—Share Certificates duly completed will be available for issue at the Registered Office of the Company three months after the date of allotment.

Applications for Shares.—Applications for shares should be made upon the form accompanying this prospects and should be forwarded with the application money at the rate of Rs. 5 per share to the Registred Office of the Bank or to its Bankers.

A copy of the Memorandum of Association is annexed to this prospectus and forms part of it.

The Memorandum and Articles of Association and the drafts of the agreemnet may be inspected at any time during the usual office hours, while the subscription list remains open, at the Registered Office of the Bank and every person subscribing for a share or shares in the Bank or to whom any shares shall be allotted will be deemed to have inspected and read the same and to have full knowledge and notice of the contents thereof and to be bound by the same.

A copy of the Memorandum and Articles of Association of the Company may be obtained at the Registered Office of the Company on payment of Re. 1 (Re. One only).

Copies of the Prospectus and forms of application for shares may be obtained at the Registered Office of the Company or from its Bankers.

Dated this 25th day of October, 1934.

OLYMPUS

(From Our Correspondent)

New Delhi, January 29.

I have just returned after hearing a debate on a first-class issue. It was not fair to the Assembly to give impressions about its speakers, without waiting for a real big occasion. The feeling I have is that even with the last Assembly, the present does not compare favourably. And, you can imagine, what a gulf between this and the Assembly of Pundit Motilal!

* * *

The only man who has made a great reputation so far is Mr. Bulabhai Desai. That, undoubtedly, means a great asset to the Congress Party. The speeches of all the others have fallen flat. Mr. Mathradas Vassanji is no substitute for Sir Purshotamdas Thakurdas. The former read out a carefully prepared speech on the Indo-British Agreement but its delivery hardly came up to the standard expected of the spokesman of the Indian Merchants' Chamber of Bombay, a body so vociferous in its declarations on commercial and political matters.

* * *

Again, Mr. Venkatachalam Chetty is not as clear and effective a speaker as Sir Shanmukham. There is no doubt that Mr. Venkatachalam is an able speaker and quite above the average of his Congress colleagues. Dr. Deshmukh is popular at a dinner table, but hardly fills the gap left by Mr. Jamnadas Mehta.

* * *

I do not know why. Somehow or other, I feel disappointed. The Gandhi-caped Members are not even demonstrative. They rarely cheer Members of their own group and hardly confound Government benches by interruptions or intelligent interrogations. The explanation, perhaps, is that the Congress Members have not yet got over the state of nervousness in which they find themselves amidst their new surroundings.

* * *

There is another reason, too, behind this weakness of the Opposition. The apple of discord has been the election of the President and the Deputy President. The effect of that conflict is already visible. Government cleverly out-manœuvred the Congress by offering solid support to any one whom the Muslim Members of the House put up. The Congress, on the other hand, was forced by Mr. Sherwani to back him. Enormous energy was wasted in canvassing; and the result was not affected.

* * *

And now the race for Deputy Presidentship is on. Nationalists want Mr. Akhil Chunder Dutt; Independents are undecided between Mr. Lahiri Chaudhry and Mr. Matin Chaudhry. The Congress Party is afraid of another defeat and is not yet clear in its mind as to whether it should put up a candidate. The Government is enjoying the fun, knowing well that its vote will prove decisive!

* * *

Government is prepared to oblige the Congress, if approached for the purpose. But Congressmen will not do so. In the meantime, the Independents and the "unattached" have allied themselves with the Government. Already, the effect of this alliance is noticeable. The Standing Finance Committee was to be elected. Government offered to back some of the Independents and the "unattached" and the result proved more effective for the Government than anything else. Of the 14 Members chosen, Congress was able to capture only 4 seats. And the other ten were Government 'nominees'! This gives government a stronger majority than it had, even in the last Assembly, on the most important Standing Committee.

However, I do not wish to be too critical. Perhaps the Opposition will realize its strength as time passes and the Government side will feel the weight of that opposition. For the moment, Mr. Jinnah is puzzled. He hardly knows which side to turn for alliance. He wishes to be in the lime light—as arbiter of India's destiny. But he finds it difficult at present even to be arbiter of his own fate and that of his party. It is his weakness and indecision that have cast a gloom over the Opposition. If he stands up for popular rights the Opposition will get vigor.

* * *

The Government strength never lies in the merits of its case. It hardly worries about that. Its spokesmen are no match for the Opposition, even as it is. But the Government patronage, which works through district sources, is very powerful,—almost deadly in its effect. The lesson learnt in the past Assembly will not be forgotten and Government will do its utmost to carry the Assembly with it.

* * *

Sir James Grigg was particularly interested in the debate on the Indo-British Pact. He wanted to take measure of those who may delve into financial and economic matters. He had, perhaps, an easy feeling that there are no giants on the Opposition benches. Anyway, the debate did give him some hints as to how to tune his first Budget speech.

* * *

Talking of Budget, I would like to say that in the Secretariat it is being taken for granted that the salary cut will be restored and also that some of the important surcharges will be removed. That means there is surplus which the Finance Member can dispose of. But speculation also indicates that some measures involving readjustment of taxation may be expected.

* * *

I wonder if Sir James Grigg is getting full help from his Department. He works hard himself; but I rather gather the impression that the recent changes in the personnel of the Department have not yielded the results he expected. It may be that some time will be required for the new officials to get firm on the saddle. Any way, this experience has strengthened Sir James in his belief that his Department needs permanent officials and should not be subject to the rule requiring change at the end of every three years.

* *

I am told that Sir James' Department did not give its full brief to the Viceroy on the occasion of His Excellency's address to the Assembly. The idea is that the Finance Member should be able to make his speech "newsy." The result was that the Education Department had its full say on the occasion.

* *

Unwanted rains have been spoiling social life here. And the first visit of the Maharaja of Nepal to the Imperial City has been robbed of a part of its spectacular effect. However, the Maharaja has realized during the Army manœuvres that air strength is the most potential weapon of warfare these days and that Nepal valley is within 3 hours of striking distance of Calcutta. And the fact that a most 'orthodox' Hindu ruler lived in the Nizam's Palace has its lesson in showing the way 'orthodoxy' is adjusting itself to the needs of the time.

"HILL-BIRD".

SOUTH INDIA

THE COUNCIL IN ACTION

(From Our Own Correspondent)

Madras, Jan. 29.

A week of the local Council, especially after a long recess and immediately before the Budget, yields a lot of points of interest to the local people but none that would interest those outside. This is perhaps true of all provinces, but of Madras more than any other. For one result of Madras being the best boy in the class-room of responsible Government provided by the Montague reforms is that almost every one of the local Council has mastered the rules and procedure relating to interpellations. And in these days of world-wide depression and acute agricultural suffering, there is hardly an area which does not afford its representatives a long list of grievances to ventilate on the floor of the house. But these interpellations, except in a few instances, hardly serve the public cause or even serve to throw any light on the questions which would not otherwise be available. The Government know only too well the motive and the purpose of these interpellations. Where they do not involve any serious trouble, there is a stock of stereo-typed answers ready to hand. And emergencies are best met by recognising them as such and asking for notice—a perfectly legitimate procedure from the standpoint of the rules, but one which, in most cases puts an end to enquiries which ought to take their course.

The attitude, with which the Government really regard the interpellations and the resoutions of the Council, was betrayed by the Revenue Member when he replied to a heckler who insisted on knowing whether the Government treat such resolutions as mere waste paper. The spirit of the wag, and a sense of veracity which is characteristic of the wag prompted the Revenue Member to blurt out the cryptic reply "Sometimes." It need hardly be said that he thereby raised a hornet's nest around him, and the apology which he tendered subsequently on the floor of the House apparently satisfied the outraged dignity of the House and the passions of its irate members. But all the same it served to rub into them the simple truth that their resolutions do not count for much in the eyes of the Government.

Nevertheless, this volubility of the local Council cannot altogether go in vain. At any rate, they cannot be overlooked in a weekly review like this. For one thing, these motions of the Council must acquire a significance when they have behind them a unanimity that is not ordinarily seen in our legislators either at the Centre or at the Provinces. The signs are that such unanimity will be more frequent in the future than it had been in the past. For there is one question which does not admit of a difference of opinion either of an honest or even of an interested kind. To give expression to the distress and the discontent of the agriculturists is the obvious duty of any one who has pretensions to representing any constituency in the Province. Even the members of the Chambers of Commerce who may be presumed to speak for particular interests, which are not agricultural, will have to voice the feelings of the agriculturists, for obvious reasons. And those amongst our legislators, who normally walk into the Government lobby, dare not do so, when the motion refers to the plight of cultivators in areas in which cultivation has been carried on, or in those in which cultivation has been frustrated by the cruel hand of the drought.

The famine which has left millions without food or clothing has also torn the lost shred of the mask from the toadies who have pretended that their support of the Government is in the interest of the poor. Thus, the unanimity which has been bought, so to say, at the price of incalculable suffering in the famine-stricken areas was evident in more than one context in the proceedings of the Council this week. When the motion asking for relief in the famine-stricken areas and for remission of land revenue were passed, there was an unprecedented majority in favour of the resolutions and all distinctions between the Opposition and the Treasury Benches were thrown to the wind. This is, perhaps, not the first time the council has recorded by an overwhelming majority its support for the case of the remission of land revenue by 33 1/3 per cent. But the repeated passage of motions like these with growing majorities in their favour shows that for the continuance of the inequitable system of land revenue the Government will be left even without its unthinking traditional supporters.

In other words, the Government will soon be left alone to face the unpopularity of their land revenue policy. This feeling is, perhaps, responsible for the somewhat stilted defence which the Government spokesmen put up in behalf of the present system. It is often said that the strength of a chain lies in its weakest link. So might it be said that the weakness of a case is seen in the strongest argument adduced in favour of it. The Government spokesmen seem to feel that the case for remission of land revenue is most effectively answered by the phenomenon of timely collection of land revenue to the extent of 98 per cent. How could it be maintained that the agriculturists are in distress and unable to pay their way when the Government have succeeded in realising their revenue to nearly the fullest extent? No one, who is acquainted with the conditions in the country, will ask for an explanation of this phenomenon. Surely, not the latest recruit to the bureaucracy could be blind to the ties which bind the cultivator to his holding or the pressure which the land revenue officials can bring to bear on him for payment of the revenue. If in conditions like these the Government have succeeded in collecting their revenue, the collections are rather a reflection on the relentless methods employed than on the capacity of the cultivator to pay up his dues. But the land revenue question is long past the stage of argument and counter-argument. It is now crystalised into whether the Government can possibly forego a big slice of land revenue and whether the people have any means of bringing pressure to bear upon the Government. But it is unfortunate that at this stage of the controversy, the Revenue Member should employ arguments which are a virtual invitation to a no-tax campaign.

To pass to less distressing topics, the Council was regaled the other day with the exposition of a new economic cult by Sir A. P. Patro. The separatism of the veteran non-Brahmin has now had a territorial application. As if India has not enough bother with the insoluble problems of Federal Finance, the allocations of land revenue between the centre and the Provinces, provincial contributions and subventions and state subsidies and the like, Sir Patro has now raised the question whether a provincial Government can incur expenditure on schemes which do not divide their benefits with a mathematical exactitude over all sections of the Province. It was, perhaps, a faint echo of the aspirations of the Andhra Desha to the status of a separate province. But it is to be wished that this echo had taken other forms than of an economic crudity without all precedent in history. It is one thing for Sir Patro to press the claims of the northern districts for such schemes as the Mettur Project in South India; it is quite another to promote discord in provinces which had so far had a good record of harmonious working. It is well that the unpleasant task of pointing out the crudities of Sir Patro's economics was accomplished by a European Member as any effective reply from any Member of the South Indian districts world be obviously exposed to insinuations.

REPORT OF

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet and Accounts of the Bank as at 31st December, 1934.

We have examined the above Balance Sheet with the books of the Central Office and of Local Head Offices and with the returns submitted and certified by the Branch Agents, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial

Calcutta, 29th January, 1935.

A "STABILISATION OFFENSIVE"

FRANCE'S BALLON D'ESSAI

FUTILITY OF PREMATURE ATTEMPTS

BY PAUL EINZIG

[The following article on the origin of the recent stabilisation rumours and the fate of any attempt in that direction in the present circumstances was received too late for publication in the last issue of Indian Finance. It has, therefore, to appear along with the subsequent contribution of Dr. Einzig on "The Dollar Scare," and the comedy of errors in international financial circles, as a result of which the exchanges were tossed about for over a week. The two articles are, infact, closely related ; and the delay in the publication of the earlier is not, perhaps, to be regretted.

A few days ago, rumours of an impending stabilisation talk between Great Britain and France found their way into the Press. It was reported that, on the occasion of his forthcoming London visit, M. Flandin will discuss with the British Government the question of the stabilisation of sterling and dollar. An emphatic denial was issued in Paris, but only three days after the first publication of the report. It appears as though the report was a *ballon d' essai* to sound the feelings of public opinion and official quarters on this side of the Channel towards the question of stabilisation. The response was, however, as unfavourable as possible. The British Press was unanimous in emphasising that a stabilisation talk at the present stage would be premature ; and it was pointed out in well-informed quarters that the official policy was defined a few weeks ago by a statement in the House of Commons made by the Chancellor of the Exchequer, and that nothing has happened since the statement to induce the Government to change its views. Thereupon followed the official French denial, which made up for its lack of promptitude by being over-emphatic.

It was stated that M. Flandin has no intention of discussing stabilisation in London, because, among other reasons, the rate of stability is the private affair of every country. This discovery must have been made quite recently in Paris, since on earlier occasions the French authorities did not hesitate to urge the British and American Governments to stabilise without delay. At the London Economic Conference the French delegates, together with those of the other countries of the Gold Bloc, insisted upon pre-stabilisation as the preliminary condition of continuing the negotiations. M. Flandin himself did not hesitate to advise the Britash Government on the question of stabilisation when, as Finance Minister in M. Laval's Government, he came over here on a private visit towards the end of 1931.

Nor does his present disclaimer carry more conviction than official statements of a similar kind usually do in similar circumstances. For, it is almost unthinkable that, when statesmen of two countries meet nowadays to discuss international problems, they should avoid the discussion of financial topics. There can be no doubt that, notwithstanding the denial, stabilisation will be discussed informally on the occasion of the impending London visit of the French Premier. But it is equally certain that the result will be merely for each to become acquainted with the other's point of view, without being able to achieve a *rapprochement*.

The British attitude was clearly defined in Mr. Chamberlain's recent statement. So long as there is a disequilibrium between French and British commodity prices on the one hand, and between British and American prices on the other, it is not considered safe to stabilise sterling. Since the statement was made, the outlook for the elimination of the dual disequilibrium has not improved. It is true that produce prices in the United States underwent a slight increase, and that President Roosevelt's ambitious public works programme carries the possibility of a further rise. On the other hand, the uncertainty created by the assertive attitude of the Supreme Court of Washington, which threatens to overthrow some of the most important pieces of legislation on economic and monetary matters since the advent of President Roosevelt, is decidedly a "bear point" for commodities in the United States ; and it may more than cancel out the favourable effect of inflationary expenditure. There is thus no reason to expect that prices in the United States will rise to the level of British prices in the near future.

A fall of French comodity prices to the level of British commodity prices is even less likely. In fact, the trend of developments points to the opposite direction. The French Government has officially declared its decision to abstain from deflating further. What is more, it has announced its intention of reflating by the adoption of a policy of cheap and plentiful money. It remains to be seen how the new monetary policy will work out. Should the French authorities succeed in making money cheap, then it will tend to cause a slow and moderate rising tendency of commodity prices. Should they fail in their object, and should the new policy lead to inflationary borrowing from the Bank of France for the Treasury's requirements, then the rise in commodity prices will be less moderate. In either case, the discrepancy between French and British prices is likely to widen, rather than contract, as a result of the new French monetary policy. In any case, it will take some months before the new policy can produce its effect. Meanwhile, the French outlook will remain as uncertain as the American outlook. In such circumstances a new "stabilisation offensive" would be as badly timed as the "stabilisation offensive" launched during the Economic Conference, when President Roosevelt was determined to depreciate the dollar before stabilising it.

No doubt, the stabilisation of sterling and dollar has become a matter of extreme urgency from the point of view of France and the Gold Bloc. For, it has been realised in each of these countries that any further deflation is out of the question. Any further depreciation of sterling and dollar could not be offset by another deflationary drive in the gold countries. It is, therefore, evidently to the interest of France and the other members of the Gold Bloc that the Governments of Great Britain and the United States should commit themselves against a further depreciation. But neither of the two Governments can do so at the present moment. President Roosevelt would not think of relinquishing his right to devalue the dollar to 50 cents, so long as the results of his public works policy are uncertain. After all, should that policy fail to raise

prices and revive trade to a sufficient extent, a fresh devaluation is the only remaining weapon he can apply effectively before the presidential election of 1936. The British Government is equally unwilling to link sterling to gold at the present moment. Apart altogether from the reasons given by Mr. Chamberlain, the gold standard is still sufficiently unpopular in Great Britain to make its restoration before the general election inexpedient. Nothing is likely to be decided upon either in Great Britain or in the United States before the end of 1936.

It would be well for the countries of the Gold Bloc to realise this. Their present policy is to maintain their parities without deflating further to that end, in the hope that a rise in world prices would restore equilibrium. Doubtless, some of the gold countries are technically in a position to wait another two years or so. But at least two of them are not in a position to resist the adverse trend for any considerable length of time. It is a foregone conclusion that, as soon as the definite rates of stabilisation of sterling and dollar become known, the countries of the Gold Bloc will devalue. They consider it worth their while to wait until Great Britain and the United States announce their decision. They would, doubtless, be right, if it could be reasonably expected that a decision will be arrived at in London and in Washington within the next few months. If, however, it takes years before sterling and dollar are stabilised, some of the gold countries may find it difficult to await the decision. While France can well afford to wait, possibly Belgium or Italy may come to the end of their resistance before very long. Their defection from the Gold Bloc would increase the difficulties the remaining members are confronted with. It is, therefore, obviously desirable from a French point of view that Great Britain and the United States should decide upon their rate of stabilisation in the near future.

When the official French statement pointed out that the rate of stabilisation is the private affair of every country, this was evidently not meant in the sense that the French Government disavow any desire of influencing the decision of the British and American Governments. What they meant was that they do not want any British or American interference with their own monetary plans. The statement was meant to be an answer to the suggestion that the Governments of London and Washington are prepared to stabilise if the countries of the Gold Bloc are prepared to devalue at the same time to a degree required to eliminate the existing disequilibrium. What the French Government want is evidently unconditional surrender on the part of the British and American Governments, leaving a free hand for the Governments of the Gold Bloc to decide upon their rate of stabilisation. This attitude is in itself sufficient to show how utterly futile would be any attempt at present to come to an agreement on stabilisation.

London, January, 15, 1935.

THE DOLLAR SCARE

A COMEDY OF ERRORS IN INTERNATIONAL FINANCE

By Paul Einzig.

In my last week's article, I dealt with the stabilisation rumours which got into circulation towards the end of December and during the first half of January. Rumours of impending stabilisation moves usually recur whenever the exchanges remain reasonably stable for a few weeks. In the absence of violent exchange movements, the market is usually inclined to assume that the authorities are preparing for a *de facto* stabilisation or, at any rate, for pre-stabilisation. During the past week, however, those concerned with foreign exchanges had once more a great deal to occupy their minds in the form of violent and most irregular exchange movements. There was time to think and talk about stabilisation, and there was ample evidence that exchanges are as unstable as ever.

What revived the dormant foreign exchange market was the scare caused by the notorious "gold clause" action brought before the Supreme Court of Washington. There appeared to be a fair chance that the supreme court might declare the Law of June 1933, suppressing the gold clause in Government and private bonds, to be unconstitutional. The view was held in some quarters that in that case the Administration would have no choice but to restore the dollar to its old parity. The idea was obviously absurd. Whether or not President Roosevelt was right in devaluing the dollar to 59 cents, the deed was done. Prices, wages etc. have, to a greater or lesser extent, adjusted themselves to the new level. To reverse all this with a stroke of the pen, merely because half a dozen lawyer-politicians decided that the gold clause act was unconstitutional, would be unthinkable as an attempt to unscramble the eggs. It would lead to a slump in commodity prices and in securities, an increase in the real burden of indebtedness, public and private, a series of bankruptcies and financial collapse. It was evident that the Administration would find some other solution if the ruling went against them. And yet many otherwise perfectly intelligent people seemed to believe that there was a possibility of revaluing the dollar at its old parity.

Consequently, there was a certain amount of speculative selling of foreign currencies in New York and some speculative buying of dollars in European markets. The dollar gradually appreciated and on January 15, it rose to its gold export point of 15.19 in Paris. In normal conditions, this should have led to gold shipments from Continental centres to New York; and this again would have checked the upward movement of the dollar. In the existing conditions, however, things did not develop so smoothly. The banks, which usually undertook gold *arbitrage* transactions, were rather worried about the possibility of a revaluation of the dollar. Doubts were entertained as to whether the American authorities would still be prepared to pay 35 dollars per ounce of gold when the consignments arrived in New York. Although most reasonable people admitted that the chances of a revaluation were infinitesimal, yet *arbitrageurs* hesitated to take advantage of the appreciation of the dollar, saying that, after all, if President Roosevelt did decide to restore the old parity, shippers of gold would suffer a loss of 41 per cent. of their capital, and it was not worth while to take such a risk for the sake of a profit amounting to a fraction of one per cent.

What happened on January 15 is worthy of the name of a "Comedy of Errors." The French banks, reluctant to take the risk, cabled to their New York

correspondents asking them to guarantee the buying price of 35 dollars. (The attempt to do business on joint account, with the other party taking the whole risk against half of the profits, is nothing if not typically French.) The New York banks replied that it was not their job to guarantee the gold buying price ; but they made enquiries at the Washington Treasury and attempted to obtain an official guarantee of 35 dollars being paid for future deliveries. The answer of the Treasury officials was what was to be expected ; they were prepared to pay 35 dollars per ounce of gold, but there was nothing in their regulations to authorise them to guarantee that rate for future delivery. By the time this perfectly natural and reasonable reply was cabled back to Paris, it was interpreted as a refusal on the part of the American authorities to guarantee the price of 35 dollars. Thereupon, the French banks refrained from shipping gold. Since the American bank branches in Paris had general instructions not to withdraw gold from the Bank of France if they could help it, no gold was taken for shipment ; and there was nothing to prevent an appreciation of the dollar in Paris far beyond gold export point. This exchange movement gave rise to rumours in New York that France and the other countries of the gold bloc were on the point of devaluing their currencies. Thereupon, there was heavy selling of these currencies in the New York market. This again was interpreted in Paris as an indication that the American authorities intended to revalue the dollar, and the buying pressure became accentuated.

Nor did London remain passive in this game. When dollars began to appreciate and francs began to depreciate, it was pointed out in some quarters that the movements were in accordance with the official policy expressed by the Chancellor of the Exchequer some weeks ago, namely, that sterling cannot be stabilised so long as it is over-valued in terms of dollars and under-valued in terms of francs. The depreciation of the franc and the appreciation of the dollar were, therefore, interpreted as an adjustment of the triangle to suit Mr. Chamberlain's conditions.

The worst of it was that all these fantastic rumours fitted in remarkably well with the exchange movements and sounded, therefore, extremely plausible.

The result was that the dollar rate dropped some five points in London, declining well below its old parity, while the franc rate advanced nearly one point to 75 to the £. The franc-dollar rate rose to 15.48, which is nearly 2 per cent. above gold export point. Notwithstanding this, only a few *arbitrageurs* were bold enough to take advantage of the big margin of profit.

What happened during all this time in the London gold market? In the morning, rumours of a possible revaluation of the dollar scared a number of speculative holders of gold to sell out, so that at the time of fixing, the amount dealt in was as high as £700,000. The sensitiveness of the gold market to rumours is explained by the fact that a very large percentage of the gold hoarded in London is held by speculators and not by investors. While the latter are only concerned with the value of gold in the long run, the former are affected by prospects of temporary fluctuations. For this reason, they hastened to realise their holdings for fear that the dollar scare might cause a temporary fall in the price. After the official fixing, the turnover in the gold market remained exceptionally large, since the depreciation of the franc frightened many holders into selling. Naturally enough, the London price of gold followed the franc, and not the dollar, since gold arbitrage with New York was paralysed by the uncertainty as to whether the buying price of 35 dollars would be maintained. The depreciation of th franc, together with heavy selling caused gold to decline to a wide discount against the dollar ; and its premium against the franc was also very small.

Intervention on the part of the American authorities after the closing of the European markets caused the dollar to relapse to its gold point of 15.19. Next day, however, the comedy repeated itself on a smaller scale. Reassured by official statements from Washington a number of banks took their courage in both hands, and shipped a certain amount of gold, but when it got round that one of the leading American banks abstained from shipping gold, the arbitrageurs lost their nerve once more. It was believed that the reason why the bank in question abstained from shipping gold was that it had some inside information about the Supreme Court's decision or its consequences. In reality, it kept away from the market on January 16th because it had shipped as much as it wanted on the 15th. The market did not know this, however ; and there was another dollar scare, as a result of which the London price of gold was officially fixed at a discount of 1s. 5d. against the dollar. Notwithstanding the reassuring statements, it was only with great reluctance that arbitrageurs committed themselves, and most banks only risked a limited amount. Towards the end of the week, confidence increased to some degree, and the dollar-franc rate was inclined to return to gold point, though this was due partly to frequent intervention on the part of the American and French monetary authorities. On Monday, January 21, there was yet another relapse into dollar scare, owing to the reports that the decision of the Supreme Court would be sooner available than was originally expected.

The experience of the past week discloses an amazing degree of inefficiency in the official control of exchanges by the authorities concerned. The American authorities are particularly to blame for having failed to take effective steps for preventing the abnormal movements which caused a great deal of uneasiness in the security and commodity markets. All they would have had to do was to alter their routine by accepting gold at 35 dollars delivered to approved banks in the leading foreign centres, or they might have changed their self-imposed regulations by accepting gold for future delivery. Such measures would have been more effective than the most emphatic officially reassuring statements. After all, President Roosevelt has changed his policy so frequently that arbitrageurs cannot be blamed if they regard any official pronouncement from Washington with a certain amount of reserve. In the absence of a change in the gold purchasing practice of the American authorities a more persistent intervention would have produced an equally satisfactory result.

The absence of a technical co-operation between the monetary authorities of the three leading countries was painfully evident. In the mornings the Bank of France usually intervened to support the franc, while in the afternoons and in the evenings the American Exchange Stabilisation Fund did its best to keep the dollar down. But between noon and 2 p.m., when the Bank of France was closed for lunch and New York was not yet open, the exchanges were allowed to take care of themselves. It would have been easy to make arrangements with the British authorities to look after the exchanges during that interval. In the absence of such arrangements, the exchanges were exposed to speculative attacks at that time of the day. The fact that it has not so far been possible to arrange an adequate technical collaboration gives some indication of the immense difficulties of coming to an agreement on fundamental principles of monetary policy.

London, January 22, 1935.

MORE LENDING IN LONDON

POSSIBLE RESULTS OF LLD. GEORGE & BEAVERBROOK CAMPAIGNS

GROWING OPINION AGAINST IMMEDIATE STABILISATION

BY FRANCIS WILLIAMS,

City Editor, The Daily Herald, London.

By Air Mail

Special for "INDIAN FINANCE"

Two political campaigns, the course of which should be carefully watched by investors, have been launched since my last notes.

The first is the Lloyd George campaign for a large measure of national planning under a "War" Cabinet, assisted by a National Economic Council, with a programme for larger public works expenditure and internal agricultural developments, assisted, if necessary, by a greater measure of Protection.

This campaign has been much more favourably received in Government circles than was expected. It is already clear indeed that Lloyd George's main supporters will be drawn from what remains of the Liberal Party, plus quite a considerable body of Left Wing Conservatives, rather than from the Labour Party, which prefers its own programme as more fundamental.

If Mr. Lloyd George obtains, as he appears likely to do, the backing of some of their own supporters, the Government will obviously find it necessary to take him more seriously than if he were simply regarded as a recruit to a modified form of Socialism.

The second political campaign is a re-launching of Lord Beaverbrook's programme of Empire Free Trade to be initiated by a Customs Union between Britain and the Crown Colonies.

Here again, although the "National" Government have no love for Lord Beaverbrook, they may be afraid to ignore him, particularly as I have it on good authority that Beaverbrook may decide once again to go to the constituencies and run candidates of his own as he did with devastating effect upon the Conservative Party before.

Moreover, he has definitely informed the Conservative leaders that, although he would like to support the National Government at the next election, he will not do so, unless they give him some promise of support for his own policy of a Customs Union with the Crown Colonies.

And the National Gvernment, which, a recent attempt to guage public opinion in the Provinces and particularly in the industrial areas shows, is getting steadily more unpopular, will not like to risk raging, tearing anti-campaign by the Beaverbrook Press, if it can possibly be avoided.

From the investor's point of view, the effect of these two campaigns may prove important.

The Government may be driven by Mr. Lloyd George to some measure of public works development. That means an increase in Government borrowing; and in order to facilitate this, money rates will be kept low.

Moreover, as part of his Empire Free Trade policy, Lord Beaverbrook wants cheaper borrowing facilities for the Colonies.

The Government may, therefore, try to placate him to some extent by facilitating Colonial conversion loans.

Apart from the possibility of fresh Government borrowing, Mr. Neville Chamberlain has now completely removed his ban on Trustee conversion operations ; and Municipal Authorities have been informed that the Treasury is in favour both of Municipal Conversion schemes and of new Municipal borrowings.

We may expect, therefore, a large number of Municipal conversion operations in the future. In addition, plans have already been prepared by a considerable number of Municipalities for the flotation of new loans.

There is likely, therefore, to be an increasing number of sound investments available shortly, though investors should not expect any substantial increase in the return they will get from investments.

It is probable also that the Chancellor will shortly follow his lifting of the bank on Trustee conversion by a partial removal of the ban on foreign lending.

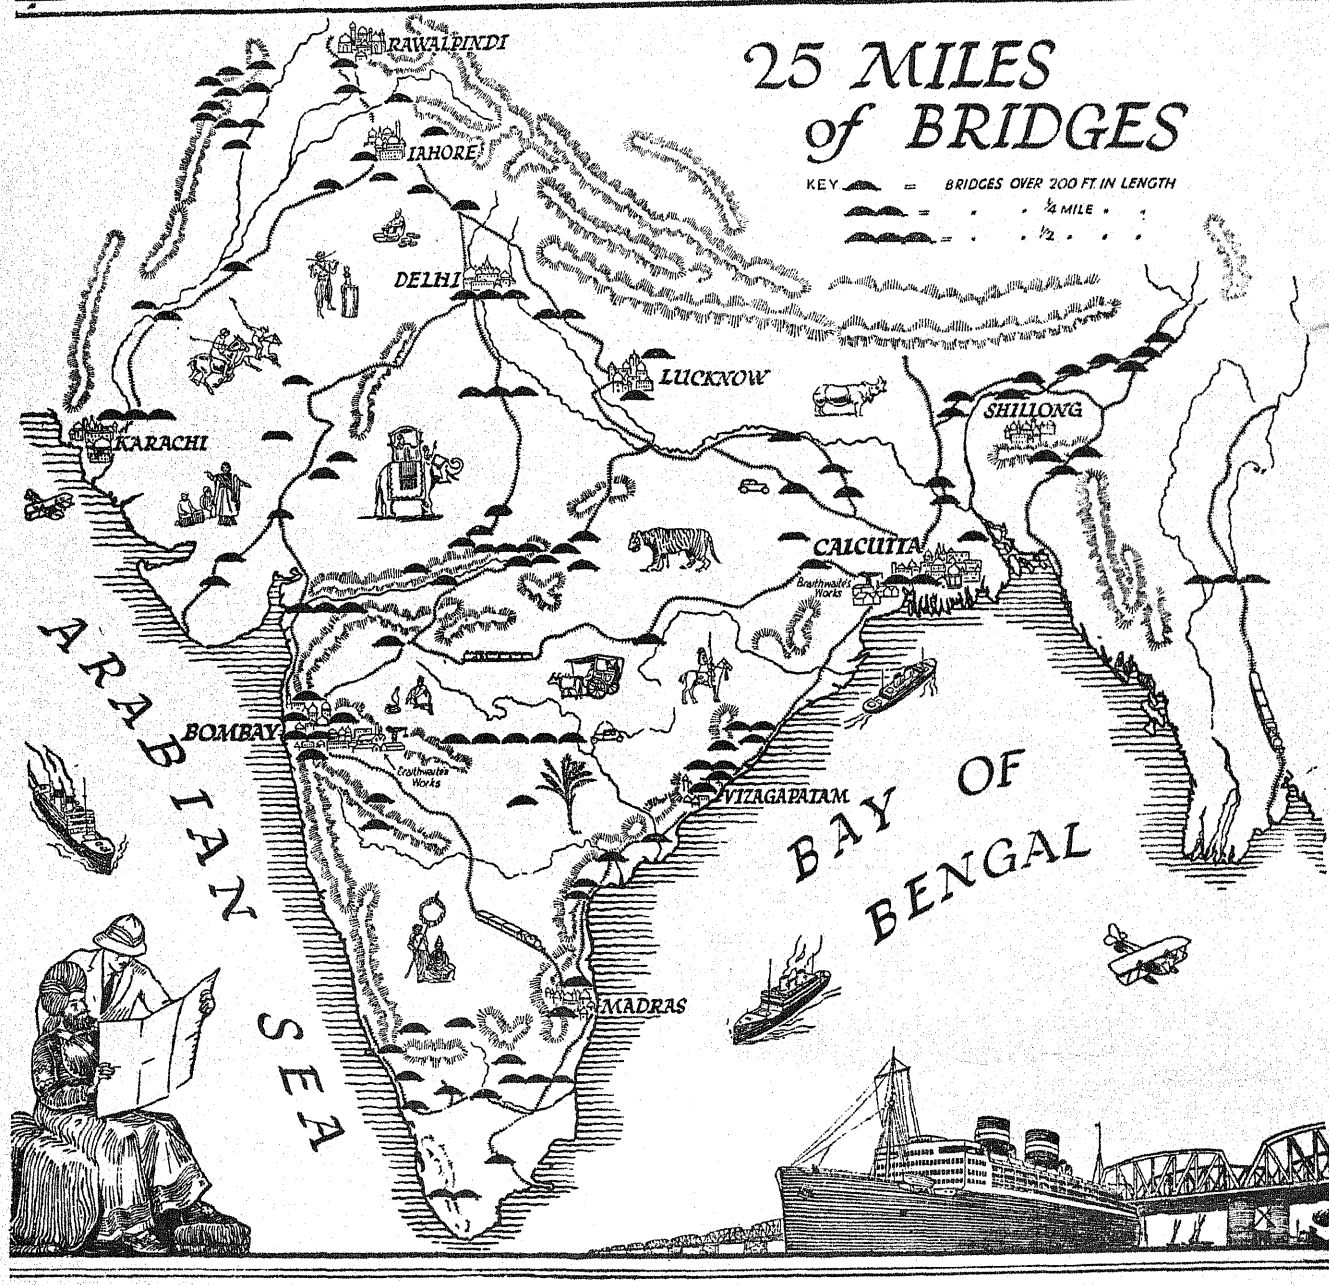
I have good grounds for believing that the Treasury is already examining the possibility of a considerable expansion of foreign lending in the sterling bloc. It is being urged to this course of action by the banks and by the big investment trusts. It also believes that by doing so it might increase orders for British manufactured goods, particularly heavy industrial plants and, therefore, meet the charge of doing nothing to help the great staple industries.

The arguments against any immediate attempt at exchange stabilisation, to which I referred last week, are, I am glad to see, gaining ground.

It is particularly interesting to note that even those of the Bank Chairmen, who are in favour of a return to the gold standard at the earliest possible time, are declaring in their annual speeches this year that it would, to quote one of them, "be a mistake of the first magnitude for this country to return to gold, until there is a reasonable probability that the system will be allowed to function normally."

Any idea of an early stabilisation agreement may, I think, be dismissed.

This makes it all the more likely that there will shortly be an attempt to increase trade within countries in the sterling bloc and that, in order to assist such an increase, facilities for raising loans in London will be given to the sterling countries.



On the map are shown the 116 most important bridges out of the 196 which Braithwaites have built in INDIA between 1923 and 1932.

CLIVE WORKS — CALCUTTA

MULUND WORKS, — BOMBAY

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

LLOYD GEORGE'S "NEW DEAL"

In the lingo of the makret place, a passion for New Deal is the latest in Western statesmanship. Mr. Roosevelt set the fashion; and it is perhaps with a twinkle in his eyes that the American President is watching developments in a country that openly professed a dislike for what it called "a dangerous speculation." Great Britain ,more than one speaker has said from public platforms, will never give up her conservative, if somewhat slow, methods in the industrial and financial sphere and will never try dubious experiments with her money or her resources. This innuendo has lost much of its sting, for it is just such an experiment that has produced undeniably good results in America. And Mr. Roosevelt's staggering scheme for removing unemployment from the country has at last made British statesmen think whether there is not something in the New Deal in Great Britain and thus paid a deserving tribute to the American President.

The scheme is still in a nebulous form, and it is doubtful whether L. G.'S rhetoric or his old fire will make a stolid and conservative cabinet try the experiment. Nearly everyone must agree with L. G. that the whole industrial and financial machinery of Great Britain needs thorough overhauling. But, opinions may differ as to the exact manner of doing it. Mr. Lloyd George's speech at Bangor, in which he outlined his New Deal policy, can hardly be termed a model of definite and constructive economic planning. But he gives the outlines along which, in his opinion, the task of overhauling should be commenced. A statutory body should be set up, he said, to make the recommendations for Government action in the organisation of industries and the financial resources of the nation should be used for development and to stimulate employment and to use all idle money. The Development Council, as he calls it, should have the following functions

> (a) To take a survey of the industrial, agricultural and financial resources and potentialities of this country with a view to reporting on practicable developments which would increase employment and enhance national prosperity, wealth and well-being.
>
> (b) To prepare and approve plans for industrial organisation, land development, improvement of the nation's services, amenities and cultural and recreational facilities, and the better utilisation of our resources, our credit and our man-power.
>
> (c) In viewing the possibilities of productive development, the council must take into account the immense opportunities afforded by our Colonial Empire.
>
> (d) It must consider the application of the national credit with a view to the proper financing of the programmes it decides to carry out and harness that credit to the enterprises it plans.

His suggestions about unemployment follow the lines of President Roosevelt's policy faithfully. He is for large public works which will provide work instead of dole for the vast army of the unemployed.

He achieved something of his former power of vituperation in criticising the policy of the Bank of England. The return to gold standard in 1925, for which Mr. Lloyd George holds the Bank of England responsible was, in his opinion, a costly blunder.

> "In the past, the advice and action of the Bank of England had been misleading, short-sighted, narrow and mischievous. Its cumulative blunders had cost the nation during the past twelve years more than would have sufficed to put through a gigantic scheme of industrial, agricultural and social reconstruction."

His financial proposals are, perhaps, the vaguest part of a rather vague scheme. "My financial proposals," he said, "would involve something in the nature of two budgets in each year, one budget dealing with the ordinary revenue and expenditure of the year, the other budget for capital expenditure. The amount spent in each year would be limited by the capital which could be raised without injury to the ordinary operations of trade. The enterprise, whatever they are, must be within our means at that time. I believe a Great Prosperity Loan would be subscribed and over-subscribed by an eager and enthusiastic public."

With all his sincerity of purpose and administrative talent, Mr. Lloyd George has not been able to avoid a few economic fallacies. For instance, referring to tariffs, he said "Now that we have got our tariff set up, I would use them rightly as a means of inducing a removal of, or at least a reduction in, difficulties of trading with other countries." He points to the very factor that has led to the shrivelling up of international trade as the panacea for the ills which international trade is heir to. It is by a removal of tariffs and a generous application of free trade principles that international trade can, if ever, be resuscitated. Every one in Great Britain, however, is waiting anxiously for Mr. Lloyd George to expound his scheme more fully in his subsequent speeches.

Another of the "Big Five"

The Barclay's Bank, one of the Big Five, has announced the results of the working of the previous year. The net profit for 1934 amounted to £1,708,174, an increase of £103,495 on 1933. The dividend on "B" and "C" shares was maintained at 14 per cent. The Bank encountered a heavy reduction in Bills discounted, the figure for 1934 being £47,572,778 against £59,953,329. Deposits were slightly up—£380,093,759 against £378,759,772. Advances also increased from £148,835,468 to £155,979,234 proving that there were more avenues of investment than in 1933. Investments themselves showed a considerable rise, from £104,849,868 to £110,463,839.

An otherwise favourable year for the Barclay's Bank was marred by the sad death of its able Chairman, Mr. Goodenough, towards the end of the year.

A year of Trade Expansion

With the publication of December Trade returns the totals for the year 1934 are available for British exports and imports for 1934.

British exports in 1934 totalled £396,107,544, an increase compared with 1933 of £28,198,492. Re-exports, at £51,263,472, showed an increase of £2,182,745. Imports were £57,314,704 higher at £732,330,823.

In December, exports amounted to £34,300,382, an increase of £3,870,818 compared with December, 1933, but a decrease of £1,824,882 compared with November. In both Decembers, however, there were only twenty-four working days, whereas in November there were twenty-six. Imports, at £63,262,544, were slightly higher than in December, 1933, but showed a decrease of £1,424,803 compared with November.

December, from the point of view of trade, is rather a slow month being full of holidays. It is a time when a tired business community loves to lay down the reins for a few days and troop to holiday resorts for a well-earned rest. Such an exodus is not without its effect on trade and industry, swelling as it does the railway revenue and the hotel and catering industries. But export and import trade on the whole slows down in the Christmas period. Nevertheless, December, 1934, recorded the highest level in daily exports since 1930. The daily import also was the highest in any month since February, 1932. But in February, 1932 there was considerable dumping of foreign goods on the British market in anticipation of the Import Duties act.

Taken as a whole, 1934 has proved a year in which the British export trade did take a definite stride forward, made up all the ground lost during

Air Mail Week.

the slump, and returned to a level slightly above that attained in 1931.

FOREIGN TRADE IN 1934, 1933, 1929

(In millions of £)

	British exports			Retained imports		
	1934	1933	1929	1934	1933	1929
Food, drink, tobacco—	30.5	27.8	55.6	334.7	327.7	509.5
Raw materials—	48.3	46.0	78.9	182.1	154.8	285.3
Manufactures—	304.9	281.7	573.8	160.7	139.9	305.5
Parcels post, &c.—	12.4	12.4	21.0	3.5	3.5	10.8
Total—	396.1	367.9	729.3	681.0	625.9	1,111.1

On the export side, a thirsty America taking to drink probably accounts for the increase in the food, drink and tobacco exports. The coal exports increased by 592,000 tons. But the Empire is not seen at a disadvantage in this category, owing chiefly to the reduced shipments to the Irish Free State. The exports to Norway, Sweden, Denmark, and Finland increased slightly from 6,300,000 to 7,900,000. But Polish competition was responsible for the decline of one million tons in shipments to France and for decreased sales to Belgium and Italy. The Iron and Steel exports are up by £5,250,692, light metal by £1,018,457, electric apparatus by £1,330,737, Machinery by £5,667,176 and vehicles by £2,116,907. Woolen textiles and artificial silk also show large increases. The Empire Countries accounted for no less than £11,800,000 of the increase in exports.

Cotton, however, made no progress in 1934. Exports have been nearly on the same level as in 1933 and markets both for yarns and piecegoods have been stationary. India took less yarn during the year and the German Restriction Scheme also affected exports of cotton goods.

U. S. A.

SUPREME COURT & GOLD CLAUSE

Though the history of the New Deal has afforded many a sensation, there has been none to beat tht one that was caused over the probable effects of the Supreme Court decision on the question of the Gold Clause. There were people who were prepared to believe the worst as well about the decision of the Supreme Court, as about its effects on the policy of the Administration regarding the New Deal. The Supreme Court, it was believed, would not be swayed in their interpretation of the law of the land by considerations of public policy, such as would appeal to the President and his secretaries. This is only natural, for in such a Constitution as America has, the Supreme Court is intended to ensure that the rights guaranteed by the Constitution to the States or to individual citizens are not overridden, except by legislation within the limits of the competence of the legislative authority. The Supreme Court is not to show any undue deference to administrative convenience. And if, according to these well-understood principles, the Supreme Court finds that the abrogation of the Gold Clause is not valid, it will not normally be dissuaded by any consideration for the Government. But it is more than doubtful whether the law is against the Government or, even if it were, an adverse decision by the Supreme Court would be followed by all the consequences which the public were prepared not only to imagine, but also to act on.

It must be confessed that the imagination of the public in this matter was stimulated by the defensive attitude taken by those who pleaded before the Supreme Court on behalf of the Government. Whether this was due to a consciousness that the law is against them, or to a belief that it should suffice to impress the Supreme Court with the gravity of the question before them, it is not clear. But it is certain that Mr. Cummings, the Attorney-General, laid stress only on the latter; and the judges too were less inclined to listen to arguments of this kind than to a mere interpretation of the law. Possibly, the judges were only too well aware of the complexity of the legal aspect of the question and its immense and incalculable importance to the national economic policy and business all over the world. Mr. Cummings referred to the fact that the abrogation of the Gold Clause was the basis of the stupendous efforts which the Government were making to lift the country out of the depression. He also drew the attention of the Supreme Court to the international importance of America refusing to respect the Gold Clause, inasmuch as the United States would, before long, have to engage in negotiations with Great Britain and other countries of Europe on the best means by which the international monetary standard could be restored. Obviously, if the Supreme Court were to declare that the abrogation of the Gold Clause was invalid, the economical and financial prospects of America and the world at large would be shattered almost beyond repair.

But as mentioned already, the judges were somewhat impatient of this line of reasoning which they could well do for themselves. And they were not satisfied with the stress which Mr. Cummings, the Attorney-General, laid on the powers of Congress under the "general welfare" Clause of the Constitution, which, he said, would be more applicable in the present case than the clause referring to the powers to establish a uniform currency. Chief Justice Hughes almost shouted at Mr. McLean, the Assistant Attorney-General: Here you have a U. S. Government bond which the Government promised to pay in a certain kind of money. Where do you find constitutional power to alter that bond or Congressionist power to change that promise?" If the Chief Justice wanted a particular section to show that a specific right is vested in Congress or in the Administration to alter the terms of a bond, the Attorney-General must confess to there being none of the kind. Inasmuch as the emergency, which arose in March 1933, could not have been foreseen in any accurate manner, the judges must be content to interpret the "General Welfare" Clause as covering the action taken by Congress and the Administration in regard to the Gold Clause in U.S. bonds. There was little indication of the readiness of the Supreme Court to put such an interpretation on the General Welfare Clause.

The end of the hearing, therefore, has been the signal for the rise of pessimism in the public mind in regard to the ultimate decision. The stocks were falling sharply, in some cases as much as four points, and those bonds which contained the Gold Clause were taken avidly in the hope that an adverse decision of the Court would invest them with their full value.

It might well be that, after all, the public is not prepared to believe that a revaluation of the dollar to its old level would be possible. For commonsense leaves no room for doubt that it is far too late in the day to undo the work of the last one and a half years. But there were speculators who were prepared to convince others, perhaps, more than they are convinced themselves, that the Supreme Court is capable of giving an adverse decision, that it is not inclined to consult the convenience of the Administration, and that, once the court gives an adverse

Air Mail Week

decision, the President would have no option but to restore the dollar to its old value. Such speculators have, apparently, reaped the fullest advantage of the gullibility of the public. And during this period, the unsettlement caused by these people extended from the bond market to the exchanges and, finally, ran through the whole gamut of international finance. Speculative interest in American bonds carrying in the Gold Clause was easily aroused in foreign countries also. And while within America it would have been a case of merely buying dollar bonds containing the clause, with foreigners it would suffice to buy dollars on the exchange market. The idea that the dollar was to be revalued to its old parity was also strengthened in an unexpected manner. The strength of the dollar following the buying of the currency on speculative account was naturally followed by the franc and the European currencies falling to below the gold export point. But attempts to restore equilibrium through movements of gold were frustrated by unexpected developments. It is learnt, for instance, that French banks wanted from New York a reassurance that the Treasury would pay at the rate of $35 to the pound for gold shipped from Europe. But the officials, little realising the importance of such enquiries, answered them in the usual official routine drawing attention to the absence of any provision under which the Treasury could either afford such a guarantee or conclude forward contracts. This was interpreted by foreigners as presaging the revaluation of the dollar; and for more than a day the international exchanges were experiencing the wildest fluctuations.

But they have calmed down again and though people have no clear idea of what the decision of the Supreme Court might be, they are prepared to believe that an adverse decision would not be immediately followed by a revaluation of the dollar. This is, undoubtedly, the best view to take of the present situation. For it is difficult to be optimistic about the decision of the Supreme Court. As pointed out already, the judges of the Supreme Court did not show themselves in favour of the Administration and a favourable decision is unlikely, unless the attitude of the judges was only the display of a judicial poise. At the same time, it is not to be supposed that the Administration will allow all their plans to be upset by such a decision. By all tokens, the Administration are preparing themselves vigorously for such an unwelcome eventuality. Prominent politicians are somewhat confident that, after all, the Supreme Court would not endanger the national economic policy by too close an adherence to the letter of the constitution. They believe, that, while the court would attempt to interpret the existing law without any bias for the Government, they would also give due weight to the responsibility of Congress for the general welfare of the country. But in Treasury circles, such confidence is conspicuous by its absence. Mr. H. Morgentheau seems to be the least optimistic; and he has given out in an interview that measures are being made ready for meeting the situation that will rise as soon as the Supreme Court gives its decision. It will be very difficult to indicate in the present state of the American constitutional law what measures the Government might take to preserve the work of the last one and a half years from the upsets that might be caused by the Supreme Court. But it ought to be possible for the President and Congress working in union to devise some such measure. Reference may, however, be made to the proposal that the Government should take powers to expand the Supreme Court in a manner that they would be sure of a favourable decision. But public opinion in America would be averse to any such interference of the executive in the functioning of the judiciary. Even if this crude suggestion were ruled out, America should find ways and means of getting out of the fix that is now threatened.

FRANCE

IN DEFENCE OF CARTELS

Along with the initiation of an era of cheap long-term money, the formation of Cartels for the control of large-scale production forms the chief feature of M. Fladin's new deal for the resuscitation of France from the economic depression. In our last issue were given the main outlines of the Bill introduced in the Chamber for this purpose. It was pointed out that the introduction of this corporative system is intended to pave the way for the transition of the industries from a state of dependence on State assistance to a state of liberty. This opinion of the Government has not received support from the people. The New Bill has met with mixed reception.

The *Journae Industrielle* regrets the insistence on liberty in all the speeches of the Minister, and expresses the opinion that the experts, who are to determine the new codes, do not have a very enviable task and that their decisions are not always likely to be above question. The very variety of the French products is cited as an obstacle to the success of the scheme; and M. Flandin has been accused of trying to apply American remedies to industries which have always refused to adopt American methods.

This has also developed into the wider question of a general condemnation of interference by the State in industrial affairs. In many quarters, where two or three years ago the quota system was regarded as an unavoidable defensive measure, it is now regarded as not conducive to national economic well-being. The increased use of the quota restrictions and the administration of the various exchange agreements have brought the Government more and more into the sphere of business.

The authorities on the other hand, have not left this criticism unanswered. M. Marchandeau, the Minister of Commerce, in a statement published in *L'Informatin* challenges the critics to lay before him an alternative proposal. In his view the continuance of the policy of *laissez faire* threatens to bring a deflationary crisis.

The shrinkage in purchasing power brought about thereby will be so much that no effective alternative could be found to an intensification of currency hoarding and the concentration of production in a few hands. The hoarding of money and the trade stagnation that the country has witnessed these years are directly traced to the trade policy followed in the past years. If the advent of cheap money contemplated in the new Treasury Bill legislation is to be a complete success and if the industry is to get the fullest benefit out of these measures, the Minister points out, the industries themselves should co-operate with the authorities in facilitating recovery. This, they can do only by restriction of production of all important commodities and regulating the output to the demands of the internal and external markets. The chief defect in the French national economic life is the gross overproduction in the exportable commodities and the prevention of the entry of the foreign materials thus keeping aloof the barrier between the internal and international price levels. By keeping down stocks and bringing down to the exportable level by judicious means, the natural advantages, that will be acruing to the French products by reason of their quality and variety, will be restored.

M. Marchandeau has denied that such cartels would mean a permanent restriction of output. The new measure is not intended to be effective indefinitely, and he maintains that action along such lines can also lead to development on a sound basis. He also points out the instance of Great Britain where similar reforms have been introduced, though Eng-

Air Mail Week

land has been known to be the classic defender of economic liberty. It is also pointed out that the new measure is intended to achieve a certain measure of discipline which is desired in general by all producers. Unlike the corporative systems imposed in other countries, it is pointed out that the cartels that will be formed in France will not be arbitrary. As regards the coercion provided for in the new Bill, it is explained that it will be necessary for this clause to be put into effect in cases where the industry is ripe for the formation of cartels. Where industries lack individual enterprise and initiative, recourse to new laws is inevitable ; and the Minister has taken the view that the committee of exports should be appointed to examine such cases and to submit proposals to the producers concerned. In conclusion, he has pointed out that what must be avoided is the danger that contempt of freedom may lead to a brutally centralised authority," and inasmuch as this is not likely to result, considering the temporary nature of these regulations, it is emphasized that there need be no fear.

GERMANY

AFTER THE PLEBISCITE

The Saar plebiscite has now come and gone. The Saarlanders have made clear their wishes in regard to their future government. There can be no doubt that the result of the plebiscite is the emergence of the general will of the people. By nine votes to one, they have declared in favour of a return to the fatherland. Fifteen years of disciplinary rule by an impartial international Commission and enormous quantity of propaganda literature on the horrors of Nazidom have not produced in the Saarlanders that dislike for the Reich and Reich methods whcih would have been so welcome to France. The decisiveness of the plebiscite has set at rest the anxious period of waiting and has rmoved what would otherwise have been a threat to world peace. The world has moved a step forward in over-coming the follies of Versailles, so jubilates one journal, over this result. The *Reichsfurher* says that one of the causes of German discontent will now have been removed. A very cordial welcome is given to the Saarlanders ; and the Nazi flags which were once forbidden are now flying with grand colours on all public buildings in the Saar region. March 1st has been provisionally fixed for the return of the territory to the German Government.

Of more immediate interest to this journal are the economic consequences of the plebiscite. The change over in administration will naturally result in a series of legislative enactments which will be extremely complicated, at any rate, for the next few months. The first and immediate change will be in the currency. The franc will no longer be legal tender. The Reichsmark will now enjoy this proud privilege, much to the chagrin of foreign merchants and exporters whose experiences with the various exchange regulations have been too vivid. The total amount of French francs in circulation in the Saar at the beginning of December last was estimated at about 2,000,000 fr. but there has been a considerable reduction since due to the flight of capital from the area and calling in of French credits etc. In order to prevent any serious dislocation of trade and industry the introduction of the Reichmark as the currency will be followed by the introduction of the various exchange restrictions. The total amount of francs that will be outstanding will be deposited as and when they are recovered, into a special account in the name of the Bank of International Settlements and will be devoted to the settlement of French claims.

Another immediate problem from the standpoint of Germany will be the payment to France of the purchase price of the mines and railways. Under the Rome Agreement of December 3, this amount has been fixed at 900,000,000 francs. This amount will be paid, according to one report, from the accumulated francs at the credit of the new special account to be opened and in coal deliveries. The surplus quantity of coal that Germany will now have at her command will thus be utilised for a period of five years in payment of the amount due to the French Government. The debts contracted by the Saar citizens in foreign countries are also protected by the change over and the foreign currency that will accumulate will be in part devoted towards the liquidation of these debts. At present the total amount of foreign indebtedness is estimated at 110,000,000 francs for France, £890,000 for the United Kingdom and 2,900,000 dollars for the U.S.A.

The most important industries that will be affected by this plebiscite and the resultant change in the governments will be the iron and coal industries. The total output of the Saar coal mines during 1933 amounted to approximately 10 million tons, of which about 9,000,000 tons were taken up by Germany, whereas 4 million tons represented France's consumption. The quantity used up in the Saar region itself amounted to only 3.3 million tons. It will thus be seen that France provides a very large market for the Saar coal. The large import of Saar coal by France for her iron and steel industry is attributable to political considerations more than the geographical nearness to the site of iron works With the reversion of the coal mines to Germany, France will no longer be influenced by political considerations. Nor can France expect the continuance any longer of the slight advantage in the price of the commodity which she was all along enjoying. It must also be noted that the quality of the Saar coal is not suitable for all purposes, as it is of very low coking quality.

Germany will therefore have to find new markets for about 4 million tons of coal. Of course, for a period of five years France will be obliged to accept deliveries of coal in payment of the purchase price for the railways etc. This will, therefore reduce to some extent the seriousness of the problem. There is also the necessity of the French iron and steel industry to be considered. It is reported that the Lorraine iron works consume more than 1 million tons of coal and that Saar coal is almost indispensable for these plants. With the conclusion of a mutual agreement, which Germany is contemplating with France, it is expected that France will be induced to accept not less than 2 million tons annually from the Saar.

This means that, assuming there is not much increase in the home production, Germany will have still left 2 million tons of coal for disposal. She will have to cut down her imports and find a field for the additional Saar coal in her own export market. Most of the coal that Germany consumes comes from Great Britain, with which an agreement has been entered into. Germany cannot, therefore, immediately terminate the agreement and curtail imports from Great Britain, however much she may like to do so. The only alternative left is to sell the surplus coal in the Mediterranaean countries, where German coal will come into direct competition with British coal. Will Britain enter into an agreement with Germany for the control or regulation of the export market as well ? Those, who have known the history of the Polish competition and the agreement between Poland and England a few years before, are inclined to believe that much the same policy will be followed now. But the increasing difficulties that Germany will be put to in marketting her coal will not tempt her into any agreement, unless substantial advantages are offered to her.

Even if Germany fails in all her attempts to market the additional quality of coal elsewhere, she need not feel anxious as she has found new uses for coal. The process of extraction of oil from coal has passed out of the experimental stage and is now a commercial possibility. The improved methods of carbonisation, and the increased use of oil for fuel for all purposes have opened up new possibilities.

Next to coal comes the iron industry. The position of the Saar iron mines under German control will be considerably different. The large amount of exports are expected to be curtailed by France. The chief features in the situation, however, prevent such a precipitate step in the matter. Firstly the French mines in the Lorraine and Luxemburg enjoy a quota agreement with Germany according to which a fixed tonnage of iron materials are imported. Secondly, Saar mines import the requirements of pig iron and iron ore from Lorraine. Thirdly, France has an interest in the working of the iron industry in the Saar ; and she is financially involved to the extent of nearly 40 per cent. of the capital of this industry. If France, therefore, threatens to curtail the normal consumption of iron materials from the Saar area, Germany may very well be expected to retaliate by refusing to import more from France than the bare minimum. And France cannot put a stop to the suplies of ore and other raw materials in view of the interest she has in the well being of the industry. Moreover, under the terms of the International Steel Cartel and under the terms of a direct agreement between the French and the German Steel industry, which is embedded in the International Agreement, France has pledged herself to import 500,000 tons of iron and steel from the Saar annually. This makes the position less sombre.

GATEWAY OF INDIA

(Continued from page 343)

Indian is the leader of the deputation. Dr. B. A. Agnihotri is a well-known economist of Central Europe and is a lecturer of repute in commercial and economic subjects in the University of Vienna and several other Universities. He is the editor of the *Indo Commercial Gazette* and a prominent member of the Austro-Indian Society in Vienna.

The other members of the party are Dr. Franz Nuchei, Dr. Jettmar, Dr. Krenmayer, Mr. Radolf Kisenstein, Mr. Husseri, Dr. Claudi, Countess E. Seefried, Mr. and Mrs. Riha-Hora. In a statement to the Press Dr. Agnihotri said : "we have come to India to sow the seed of what we hope will be a greater understanding and mutual co-operation between India and the countries of Europe." He assured the Press that the party had a strong backing in the countries from which they have come and the proposals that they would submit on their return are sure to be well received. Dr. Agnihotri stated that it would certainly be feasible to project, design and found in India plants to be equipped with Austrian machinery and managed by Austrian engineers. He stressed the fact that they were entirely a non-political group, an assurance which has become necessary under the present restless condition of the country.

Bombay has stolen a march on the other Universities of India in the matter of technological training. A textile instructional plant has recently been installed in the Royal Institute of Science Building for the newly constituted department of chemical technology of the University of Bombay. Dr. R. B. Foster, Ph.D. and D.Sc., Professor of Economic Technology, is in charge of this section. The students of this section will receive a thorough training in the conversion of woven fabrics into attractive saleable materials, and in the processes of bleaching, dyeing, printing and finishing. All these are of vital importance to the cotton textile industry of Bombay.

EDITORIAL COMMENTS (Continued)

THE INDO-CARNATIC BANK

Eavesdropper writes :

The Big Five amongst the Indian banks have their habitat in Northern India, otherwise known as the Hindusthan. The Small Ten, if I may coin the phrase, live and thrive in the Carnatic. The Indian Bank of Madras is the sturdiest and most flourishing amongst the medium-sized banking enterprises in this country. Mr. Narayandas Girdhardas has been associated with the Indian Bank for nearly two decades; he belongs to the well-known Khoosaldas family reputed for generations as bankers and merchants in South India. He has thus a unique blend of indgenous banking and modern banking. Mr. Narayandas, whom I know since the start of my business line, has now brought into being the Indo-Carnatic Bank with a natty capital plan and a distinguished directorate. He has also been fortunate in securing the services of Mr. Balaji Rao as Secretary. South India is eminently suited for banks of small size and of sound management. The population in that part of the world is essentially middle class ; and nationalist sentiment makes a great appeal. Public support for an indigenous bank is, therefore, assured. Branch banking is also one of the specialities for which Madras is noted. The staff available is competent and economical. The result is that a good many of the small-sized banks of South India have more branches than some of the big-sized banks of Northern India. Due to this speciality, due to the admitted experience and position of Mr. Narayandas, the Indo-Carnatic is bound to have a vigorous start and a heady growth.

NO RESTRICTION FOR COAL

The decision of the Government of India not to accept the scheme of coal restriction put forward by the coal owners' organisations will be regretted not only by the industry but by the business world in general. For months the Government have allowed a state of uncertainty to continue. Considering that the arguments in favour of restriction never had an appeal to Government and Government had more or less made up their minds that the restriction of coal was unnecessary, the delay should have been avoidable ; and the Government may justly be charged with leaving scope for false hopes. Such hopes are the more regrettable inasmuch as they enable speculators to spread rumours about the decision of the Government as it suits them. Those, who have followed the fortunes of coal shares in the Calcutta Stock Exchange, know that on more than one occasion coal shares were the sport of uncertainty. It would have been bare justice to the coal industry if Government had expedited the processes of consideration of the scheme.

The reasons which the Government of India have cited as having influenced their final decision in this matter are by no means new. They betray ways of economic thought which are more appropriate to a by-gone-age. The criteria to be applied to any scheme of regulation of competition is whether it would put more than the legitimate profits into the pockets of the owners and whether it involves any injustice to any section of the producers. So long as these conditions are satisfied, regulation should be preferred every time to wasteful competition or to the continuance in any form of unremunerative production. The reduction of the surcharge is a small money for which the industry might feel thankful.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

JUTE

Calcutta, January 31.

The raw jute market was active, the speculative interest buying on the assumption that a rise in the price would increase the value of stocks. A few bonafide investors induced quick selling at prices materially in advance than those of a week ago.

Exports of raw jute from Bengal during December, 1934, amounted to 499,778 bales of 400 lbs. each compared with 458,024 bales in December, 1933. Total exports for nine months April to December, 1934, were 539,147 tons compared with 565,498 tons for the same period in 1933.

JUTE MANUFACTURES

Calcutta, January 31.

Inspite of higher prices for kutcha bales for which mills paid, the jute goods market kept to the previous week's level. Hessian advanced with operators interested up to June, 1936, while speculators were not deterred by the extra production consequent on a further release of looms on May 1.

A fairly good business was done at the week-end in heavy goods as buyers entered into commitments extending till March, 1936.

During the eleven months ended November 30 last 388,563,500 yards of 9 porter and 524,969,600 yards of 11 porter hessian cloth were shipped from Calcutta to all foreign ports as compared with 406,267,700 yards and 508,411,100 yards, respectively, during the same period in 1933 and 379,041,400 yards and 480,050,200 yards, respectively, in 1932.

During the eleven months ended November 30 last 448,023,150 pieces of gunny bags were shipped from Calcutta to all places as compared with 426,160,900 pieces during the same period in 1933 and 439,730,450 pieces in 1932.

During the eleven months ended November 30 last 931,838,600 yards of gunny cloth were shipped from Calcutta to all places as compared with 923,389,600 yards during the same period in 1933 and 883,105,350 yards in 1932.

Total reported sales for the week ending Saturday, the 26th January, 1935 are:—

COTTON AND COTTON GOODS

COTTON.

Calcutta, January 31.

Confirmation of early reports of crop damage by frost has restored prices of cotton, which had sagged in reaction to the trend of overseas markets.

The strength at the week-end of the Bombay market on the technical situation was indicated by a decline of 5 points in the New York, May 1935 position, whereas the Bombay-Broach April-May, 1935, contract improved by Rs. 8½ per candy. Oomra contracts also moved up in sympathy with Broach and on paucity of tenders.

Bengal contracts are practically out of the picture in view of the plentiful supply of other tenderable cotton, the market's apathy being reflected in a decline of Rupee one in Bengal contract prices as against a rise of Rupees 8½ in respect of Broach April-May contract.

Total tenders against three contracts since December 1, 1934, to January 25, 1935, have been 3,450 bales in respect of the former and 40,600 bales in respect of the latter.

Export demand is on a decline owing to the disparity in rates. Bombay stocks of Indian raw cotton held on August 1, 1934, by mills and the trade were 4606,000 bales of 400 lbs. each compared with 1,246,000 bales on the same date in 1933.

Raw cotton markets in New York and Liverpool have quietened down again and spot American Middling at Liverpool has receded to 7.06d. as compared with 7.15d. a week ago.

Egyptian Middling Sakel also records a slight decline to close at 8.97d. The official estimate of the Egyptian crop is given as 7,640,000 canters which is considerably lower than the previous estimate in October.

COTTON PIECEGOODS

The expectation of the usual seasonal upcountry demand for light goods has not materialised and the market has done little business except in printed goods and fancies, dhoties being practcally neglected. The delay in absorption by the distributing centres in the moffusil is probably due to the prolongation of the cold weather. Now that conditions indicate a quick approach of the warm weather, the market holding stocks for the expected enquiries. There was very little demand at the week-end for Indian mill products. All clearances from stocks were poor. Prices, however, continued to be steady, in spite of the recent rapid advance in prices of the Indian raw cotton.

As compared with November, 1933, there was a marked falling off in the importation of cotton piecegoods into British India in November last. The total imports amounted to 79½ million yards, the drop in the case of grey goods being the heaviest.

The yarn section registered a noticeable improvement in sympathy with the raw material. Substantial enquiries were received from consuming centres with resulting clearances of stocks. A certain amount of speculative business was a feature of this section. Probably, this accounts for an advance of nearly 4 annas per bundle for 20's basis and 40's Indian spinnings. The finer counts of British yarns have not attracted any notice. Prices remain un-

changed. Imports of cotton yarn of all descriptions into British India amounted to 2.4 million lb. in November as compared with 2½ million lbs. in October. The share of the United Kingdom dropped from 1.1 million lbs. in October to 770,000 lbs. in November. But Japan increased her sendings, principally mercerised yarns by nearly 150,000 lbs. Imports from China were also higher by 70,000 lbs.

As regards artificial silk yarns imports for November were slightly lower than in October. Italy supplied 634,000 lbs. representing an increase of 130 lbs. over October. Japan suffered by comparison merely 100,000 lbs. and United Kingdom's sendings shrank from 170,000 lbs. to 30,000 lbs.

The following statistics show shipments of yarn during the last quarter:—

Exports from the United Kingdom have been on the decline, the figures for October to December being 441,372,259,303, and 231,472 lbs. respectively. In two-fold bleached yarns and sewings, however, the United Kingdom tops the list as usual, although the quantity shipped has decreased. Japan steadily improved her shipments, the totals for these months being about 739,000, 955,500, and 852,200 lbs. respectively. It must be noted that these high figures are largely due to her exports of mercerised yarns, which represent about 60 per cent. of her totals.

China exported 388,242, 376,000, and 476,800 lbs. respectively during the last quarter. Here too the big totals are largely due to that country's greatly improving shipments in double greys.

There has been a general fall in imports of single yarns, the total being about 109,000 lbs. in December, as against about 309,400 and 279,539 lbs. respectively in October and November. It may be noted that imports of single yarns from China have declined from 239,000 and 210,000 lbs. respectively in October and November to 76,000 lbs. in December.

In bleached yarns there is not much variation to report, though there has been a decline in the total. In grey yarns, on the contrary, an important rise has occurred, the totals being about 269,000, 241,500, and 438,800 lbs. respectively for the months of October, November and December. China has been mainly responsible for the rise, having shipped 400,800 lbs. in December, as against 148,200 and 166,000 lbs. in October and November.

In mercerised yarns Japan monopolises—the trade. Her import totals were 409,800, 581,6600 and 5866,500 lbs. during the three months of the last quarter, as against the total shipments of 421,200, 584,150, and 600,300 lbs. respectively.

The improved trade in art silk yarns during the last quarter, is worth noting, the figures being 2,594,000 lbs., as against 2,224,000 lbs. during the quarter of July-September. This improvement is due to the large imports from Italy. During the last quarter Japan's exports totalled the slightly decreased figure of 804,000 lbs. as against 880,000 pounds during the previous quarter. Syndicate yarns, on the contrary, largely improved, the total being 1,741,600 lbs. during the last three months as against 1,130,000 lbs. for the period for July to September.

BULLION

GOLD

Calcutta, January 31.

The conflicting views of experts on the world gold situation are re-acting on the market which was hit by the free selling of dollars by the Bank of France and by the operations of the American Equalisation Fund. In London the rate for ready gold after touching £7-2-1½d. declined to £7-1-4d, standing finally at £7-1-8½d.

European exports to America from January 15, to to January 24 are calculated at £25,400,000 sterling.

The following statement shows gold holdings in the United Kingdom since 1931, when she left the gold standard:—

	Imports.	Exports.	Excess of imports over exports.
	£	£	£
1934 (11 months) ...	251,880,422	126,464,024	128,416,398
1933	251,646,839	60,311,881	191,334,958
1932	152,176,201	134,318,565	17,857,636
1931	98,302,347	132,883,470	34,581,123

Total exports from the United Kingdom during week ending January 18, amounted to £6,953,000, of which £6,797,000 was shipped to the United States. Total imports into United Kingdom during the same week amounted to £3,535,000 to which Africa contributed £1,068,000 and India £1,809,000.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,302,099 on the 9th instant, showing no change as compared with the previous Wednesday.

During the week the Bank announced purchases of Bar Gold amounting to £101,594.

In the open market bar gold to the value of about £2,400,000 was disposed of during the week.

The market became extremely active yesterday, following wild movements in the exchanges due to rumours of the possibility of a revaluation of the dollar should the finding of the United States Supreme Court regarding the abrogation of the gold clause be adverse to the Government.

Although the Paris-New York cross rate fell below gold export point, operators were hesitant to ship gold to New York for fear the United States Treasury might reduce their buying price. In spite of official assurance that $35 per ounce would continue to be paid until further notice and that there had been no indication of any intention of an upward revaluation of the dollar, similar conditions prevailed to-day; the price of 141s. 6d. was based on franc parity, although it was about 1s. 6d. below that of the dollar. The dollar naturally strengthened against other currencies in the absence of correction by shipments of gold.

SILVER.

Calcutta, January, 31.

A rather nervous tone marked the silver section of the bullion market at the week-end. The market is awaiting developments in America. China has been recently buying heavily in London and she has almost covered her bear undertakings. America is also buying largely in London. Locally speculators have absorbed heavy retail selling which on a daily turnover in London has given them a good margin of profit.

Total exports from the United Kingdom during the week ended January 18, amounted to £873,000, of which £848,000 was shipped to the United states. Total imports into the United Kingdom during the same week amounted to £500,000, to which China contributed £149,000 and Soviet Union £57,000.

London Air Mail week:

The market has been very steady and prices have shown little variation. There have been no fresh features, but China selling has been less in evidence, the offerings again consisting largely of re-sales by the Indian Bazaars and speculators. There has also been some speculative support, but the chief demand has been for America, large amounts having been acquired for the American Government during the week.

TEA

Calcutta, January 31.

At this week's auction there was a good demand for tea of all descriptions at firm rates. Internal consumption was smaller, totalling about 13,000 packages, of which 6,000 were broken. Dusts ruled strong, prices going up by 3 pies.

At the London auctions on January 27, 25,000 packages of Indian tea were put up for sale, on a good demand for better qualities.

According to the Board of Trade, stocks at the end of December, 1934, in London were 308 million lbs. The following figures in millions of lbs. show imports into the United Kingdom for the period June to December in the last three years:—

	1933	1934	1934
Indian ...	201.8	198.1	238.8
Ceylon ...	91.8	74.3	98.7
Java etc. ...	27.3	27.8	33.5
China ...	19	7.2	4.4
Japan ...	4	1.6	.6

The following are full particulars of sale No. 31.

Tea with Export Rights.	1935	1934

Java

At the London auctions on January 24, 7,400 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a fair demand for all descriptions. Tippys and good mediums were well supported. The following were the lowest prices fetched during the day's auction:

Common Pekoe last auction 8¾d., to-day's auction 8¼d. lb.; Common Broken Pekoe last auction 8½d., to-day's auction 8⅜d. lb.; Common Orange Pekoe last auction 9¾d., to-day's auction 9¼d. lb.; Common Broken Orange Pekoe last auction 9d., to-day's auction 8⅝d. lb.; Common Broken Pekoe Souchong last auction 9¼d., to-day's auction 9d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 9¼d., to-day's auction 9⅛d. lb., Clean Common Broken Pekoe last auction 9d., to-day's auction 9d. lb.; Clean Common Orange Pekoe last auction 10⅜d., to-day's auction 10¼d. lb.; Clean Common Broken Orange Pekoe last auction 9¼d, to-day's auction 9¼d, lb.; Clean Common Broken Pekoe Souchong last auction 9⅜d., to-day's auction 9¼d. lb.

Tea Average

The following were the average prices of tea in the London market during the week:—

Indian Tea (Northern) last week 11.65d., this week 12.11d, lb.; do. (Southern) last week 11.76d., this week 11.71d, lb.; Ceylon Tea last week 13.37d., this week 13.88d. lb.; Java Tea last week 10.06d., this week 10.04d, lb.; Sumatra Tea last week 9.26dd., this week 9.25d. lb.

Tea Exports

The Export Sale on January 28, totalled about 16,000 packages, and the offerings were mainly end of season both in appearance and liquor.

Stalky and undesirable kinds were irregular and easier, but otherwise prices showed little change from last week's level, teas with black leaf being a good feature.

India

At the London auctions on January 28, 25,400 packages of Indian tea were submitted for sale.

There was a good demand. Better qualities were firm while other sorts were slightly easier. The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe ...	10½d.	10½d.
Common Broken Pekoe ...	10½d.	10½d.
Common Orange Pekoe ...	10½d.	10½d.
Common B. O. Pekoe ...	10¾d.	10¾d.
Common B. P. Souchong ...	10½d.	10½d.
The following were the value prices :—		
Clean Common Pekoe ...	10½d.	10½d.
Clean C. B. Pekoe ...	10⅝d.	10⅝d.
Clean C. O. Pekoe ...	10⅝d.	10⅝d.
Clean C. B. O. Pekoe ...	10½d.	10½d.
Clean C. B. P. Souchong ...	10½d.	10½d.

, Lon. Jan. 29.

Ceylon

At the London auctions on January 29, 19,000 packages of Ceylon tea were submitted for sale.

Commons and low mediums were slightly easier but the enquiry for better qualities was good.

The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe ...	10¾d.	10½d.
Common Broken Pekoe ...	11d.	10¾d.
Common Orange Pekoe ...	10½d.	10½d.
Common B. O. Pekoe ...	11d.	11d.
The following were the value prices :—		
Clean Common Pekoe ...	11d.	10⅞d.
Clean C. B. Pekoe ...	11¼d.	11d.
Clean C. O. Pekoe ...	11d.	10⅞d.
Clean C. B. O. Pekoe ...	11¼d.	11¼d.

The Exports of the Indian Tea from Northern India from 1st April to 29th January have been as below :—

Messrs. Bird & Co. in their review dated January 19, of the sugar market state :—

Calcutta.—The somewhat better feeling of the local Java sugar market reported last week continued during the week under review, and, with offtake improving, prices rose. This was mainly due to an increase in the prices for Indian sugars and further strong rumours regarding the possible increase in the import duty coupled with the low stock position. Importers show no inclination to reduce limits owing to the general belief that demand will gradually increase. As regards Indian sugars the market at the beginning of the week was steady but towards the close of the week there was a rush to buy due to rumours regarding the import duty and reports that the Indian sugar cane crop had been badly damaged by frost and insect pest. Most dealers endeavoured to purchase large quantities and fairly heavy sales were made by several factories at prices considerably in advance of those obtained previously.

Bombay.—The Java market during the week was the liveliest that has been seen for many months, prices for white rising by three to four annas, both for ready and distant positions. This sudden improvement is due to several important reasons, these being a revival of confidence amongst merchants and dealers, an improvement in demand from Kathiawar and out-ports, further very strong rumours of a possible increase in the import duty, and the report of the damage to the Indian sugarcane crop. Due to this better demand, "Nivas" raised their limits by 10 points for both ready and forward positions and during the week importers are reported to have sold between 25,000 tons to 30,000 tons of Java white for deliveries from January to September at prices showing a rise of anything upto As. 4 per cwt. above the previous rates. At the close of the week the market remained very steady with a firm undertone. The Indian sugar market was also very firm at the close of the week after rising rapidly by two to three annas, this rise being due to the causes mentioned above. Arrivals were estimated at 1,100 tons, while stocks at the end of the week were estimated at 1,300 tons, being a decrease of

approximately 500 tons as compared with the position last week thus showing that offtake was good.

Jamnagar and Bhavnagar.—The Jamnagar market showed signs of weakness during the early part of the week owing to a lack of demand from consuming centres, which had previously purchased heavily. Towards the end of the week, however, in sympathy with other centres and for the same reasons, conditions took a sudden turn for the better and the week closed was a firm undertone. The Bhavnagar market also opened with conditions similar to those ruling in Jamnagar, but a distinct improvement was noticeable during the middle of the week on account of encouraging reports from other centres. Arrivals during the week were approximately 33,000 bags by s.s. "Fusijama" and including these arrivals stocks were estimated to be 50,000 bags.

Delhi and the Punjab.—The steadier tendency reported last week continued until about the middle of the week when due to the reports of damage to the cane crop both by frost and insect pest, the buying activity increased with a consequent rise in prices. Due to the reported damage to the cane crop it is rumoured that factories in this part of India are not likely to work after the end of March and this has naturally had the effect of strengthening dealers' and speculators' ideas.

Karachi.—During the earlier part of the week the Java sugar market remained steady, but later rose sharply in sympathy with other centres. Speculative demand continued owing to increased rumours regarding the import duty with the result that prices increased by two to three annas per cwt. The Indian sugar market was similarly affected and in addition the full benefit of the reduced railway freight began to be felt, the market closing firm with a much healthier undertone.

Cawnpore.—The first part of the week while showing a steady tendency did not indicate in any way that there would be a sudden rush to buy as was the case in the middle of the week. Without warning the market suddenly jumped by two to four annas due to the various rumours and reports already alluded to and in sympathy with the general rise in commodity prices. Even traders who had probably never dealt with sugar before, were anxious to take part in this buying activity. A number of factories took advantage of this sudden rise to dispose of fairly heavy quantities of sugar for both near and forward positions and the market closed with a very firm undertone.

MISCELLANEOUS

WHEAT

Calcutta, January 31.

The Calcutta market was featureless at the week-end except for a little buying. The local feeling is conservative in regard to prices and on the whole a steady tone was maintained.

Reports from Karachi state that the market there is inclined to be unsettled, prices advancing by about 12 annas per candy, chiefly because of the reporter damage of the Punjab crop by frost. This advance was later checked by news of rain in Northern India, poor trade demand and liquidation by jobbers. July rate ranged from Rs. 26-7 to Rs. 25-10. Spot sales at Karachi during last week totalled about 25,000 bags dividend between Calcutta and Cawnpore dealers. The week's exports from Karachi were 62,977,990 bags for Bombay and 61,977 bags for Calcutta.

Punjab prices are firmer at two annas higher level. Okara ready was quoted at the week end at Rs. 2-7 which works out to about Rs. 25-8 per candy F.O.R. Karachi.

Government's first acreage report is anticipated to show a reduction of 10 to 15 per cent.

HIDES AND SKINS

Calcutta, January 31.

The local raw hide market remains firm on shipper's buying basis. Madras tanners are out of the raw hide market at present owing to the recent drop in prices for tanned skins.

A limited enquiry in tanned low hide is all that is reported from Madras where arrivals have been poor. Coast hides are offering at easier rates. Tanned are being taken up by American interests round about 8d., which is likely to harden as arrivals and stocks are poor. Much the same is the position in regard to tanned cow calf skins, London quotations at the week-end having been 10d. to 10½d. for tanned buffalo calf. 20d. for prime cow calf and 19d. for common cow calf skins.

STATISTICAL INFORMATION

FOREIGN TRADE OF BOMBAY

The aggregate value of the foreign trade of Bombay—imports and exports—for the month of December 1934, amounted to Rs. 13.76 crores, showing a rise of Rs. 5.21 crores, or 61 per cent. over the figures for December 1933 but a fall of Rs. 1.69 crores or nearly 11 per cent. from those for December 1932. The rise of Rs. 5.21 crores is attributable mainly to larger, shipments of treasure. Imports of merchandise and silver and exports of both Indian produce and foreign merchandise showed noticeable increases.

Imports of merchandise amounted to Rs. 4.36 crores, showing an increase of Rs. 43.11 lakhs or 11 per cent. and Rs. 13.02 lakhs or 3 per cent. respectively over the figures for December 1933 and December 1932. The increase of Rs. 43.11 lakhs is chiefly due to larger arrivals of motor cars, including motor cycles, wagons and parts thereof (plus Rs. 13.58 lakhs), cotton, raw (plus 1.148 tons and plus Rs. 11.61 lakhs), kerosene oil (plus over 2¼ million gallons and plus Rs. 10.21 lakhs), cotton coloured piecegoods (plus nearly 3½ million yards and plus Rs. 8.9 lakhs), metals and ores. Other than iron and steel—mainly copper (plus Rs. 5.91 lakhs), cotton twist and yarn (plus over ½ million lbs. and plus Rs. 5.6 lakhs), artificial silk piecegoods (plus over 1¾ million yards and plus Rs. 4.77 lakhs), and aniline dyes (plus Rs. 4.55 lakhs). On the other hand, arrivals of sugar were smaller by 7,055 tons in quantity and by Rs. 7.19 lakhs in value and those of machinery and millwork and silk, raw by Rs. 7.09 lakhs and 5.2 lakhs respectively in value. Imports of gold amounted to Rs. 2.51 lakhs as against Rs. 7.55 lakhs and Rs. 8.22 lakhs and those of silver to Rs. 45.66 lakhs against Rs. 3.14 lakhs and Rs. 4.01 lakhs respectively.

The total collection of import duty amounted to Rs. 1,36,29,316 (of which Rs. 9,19,230 represented duty on articles of luxury), as against Rs. 1,21,73,705 in December 1933 and Rs. 1,40,39,895 in November, 1934.

Exports of Indian produce amounted to Rs. 2.16 crores, showing an improvement of Rs. 27.22 lakhs, or over 14 per cent. and of Rs. 9.64 lakhs or over 4 per cent. respectively as compared with the figures for December 1932. The improvement of Rs. 27.22 lakhs is brought about chiefly by larger shipments of cotton, raw (plus 9,975 tons and plus Rs. 56.61 lakhs). Shipments of seeds, however, declined by 28,505 tons in quantity and by Rs. 33.46 lakhs in value. Exports of gold were valued at Rs. 6.21 crores as against Rs. 2.42 crores and Rs. 8.74 crores and those of silver at Rs. 22.82 lakhs against nil and Rs. 33,232 only respectively.

Re-exports of foreign merchandise amounted to Rs. 32.68 lakhs against Rs. 20.42 lakhs and Rs. 29.42 lakhs.

INDIAN COTTON

In view of the importance of ascertaining the nature and extent of the foreign demand for the various types of Indian cotton, the Indian cotton, the Indian Central Cotton Committee has been, for some time past, collecting the information by direct enquiries from exporters. Statistics for the cotton year ended August 31, 1934, just issued reveal that out of a total export of 3,118,000 bales, Bengals amounted to 803,000 bales; Oomras were as much as 1,168,000 bales; while Americans aggregated to 645,000 bales.

Any criticism of the accuracy of Government cotton forecasts to be valid must take into account the carryover of Indian cotton from season to season. In 1933 the Indian Central Cotton Committee decided to make a start in arranging for an annual census of stocks of Indian raw cotton held by thet rade and the mills throughout India. Figures just published show the total trade and mill stocks on August 31, 1934, at 1,66,000 bales of Indian cotton as compared with 1,246,000 bales in the previous year.

Returns made under the Indian Cotton Cess Act of 1923, do not furnish any information about the different varieties of Indian cotton consumed by the mills in India. As the nature and extent of such preference are matters of vital importance, the Indian Central Cotton Committee has been, for the past few years, collecting the relevant data from mills by direct enquiries. Receipts of raw cotton at mills in India for the year ended August 31, 1934, amounted to 2,463,000 bales including 297,000 of foreign cotton; 371,000 of Southers, 459,000 of Americans and 415,000 of Oomras.

GOLD FROM INDIA

Bar gold worth Rs. 20,154,466 has been exported from Bombay to Europe and Aerica this week.

The total value of gold exported from Bombay since England went off the gold standard is Rs. 2,174,805,618.—

FIRM STOCK MARKETS

DISTURBED BY EXCHANGE SCARE

NOTABLE CONVERSIONS & NEW ISSUES

By R. GORDON CUMMINGS.

By Air Mail

Special for "INDIAN FINANCE"

London, January 22, 1935.

Generally speaking, most markets have maintained a firm appearance during the past week, although several minor fluctuations have been seen in certain sections. Had it not been for the temporary upset on Tuesday afternoon and Wednesday morning, following doubts regarding the future gold content of the dollar, and the erratic and unnecessarily hasty tactics of French currency operators, a much firmer close would probably have been seen to the last account. Considering the damage, which might have arisen from the panicky action of French operators less than four days before the end of the account, it is a satisfactory indication of the underlying strength of markets that, where falls occurred, these were mostly only temporary and mainly of a precautionary nature.

Turning to individual markets, Brazilian bonds and Australian gold mining shares have provided the main features. Arising from the announcement that interest payments would be made when due on February 1, there has been a sharp recovery in Brazilian Government stocks, rises of up to 8 and 9 points being witnessed on the week. This recovery was further assisted by the transfer of a large weak bull position to stronger hands. German bonds have been stronger on the result of the Saar Plebiscite.

Following publication of exceptionally good development cables reporting rich finds on the new Yellowdine gold field, Australian mining shares have risen sharply in a number of instances, the chief rise being in *Commonwealth Mining and Finance* 5s. shares from 6s. 9d. a fortnight ago to 16s. 9d. These shares are talked still higher, but intending purchasers should adopt a cautious attitude.

Gilt-edged have been firm ; but no outstanding changes are to be reported. After weakness on the poor traffic results, Home railway stocks have recovered slightly on bear closing.

Industrials as a whole have shown little variation. Outstanding movements have been a rise of 2s. to 55s. in *Eastwoods* on the interim dividend having doubled at 5 per cent., while under the lead of *Unilevers*, Dutch industrial shares dealt in here spurted sharply on Friday. Several iron, coal and steel issues are somewhat lower, but *Bengal Iron* ordinary have been firmer on the announcement that the blast furnaces will be re-opened.

Oils have developed strength with *Royal Dutch* in the lead, but Rubber and Tea issues have been weak.

South African gold shares suffered most from the upset of Tuesday and Wednesday, but steady recovery is now taking place. West Africans are generally lower, as speculators have little to go for at the moment. Sooner or later, however, activity will return to this market.

On attention being drawn to the relative undervaluation of many issues, tin shares have been much firmer ; but coppers have been on the dull side, despite a rise in the price of the metal. There has been a revival of activity in diamond shares, *De Beers* preference rising sharply to around £12 on the improving sales of diamonds and prospects of dividend arrears being dealt with.

As shown by the ease with which the Contango has been carried through, markets are in a healthy state. Providing there are no adverse developments abroad, further advances can be looked for. The new account has started off in a promising fashion.

Gilt-Edged and Cheap Money

Last week I dealt with the outlook for Gilt-edged stocks, and in view of the persistent demand for investment stocks, further rises should shortly be seen. In certain quarters it was expected that the Government would announce a conversion offer last week in respect of Treasury 2 per cent. bonds. As no announcement was made, I think that the conversion offer will be made on 15 April next in respect of the £150,000,000 stock outstanding. Opinion inclines to the view that there will be a

set-back in Gilt-edged prior to the Budget. It is just possible, therefore, that the Treasury may announce the redemption of these 2 per cent. bonds just prior to Budget day in order to sustain the market. A lot will depend, however, on the date on which the Budget is to be presented.

In addition to the stocks recommended a week ago, I would draw investors' attention to the issues of certain of the Public Boards. Although these stocks are not trustee, they can be considered as almost equivalent to Government stocks. *Central Electricity Board* 3¼ per cent. 1974/94 can be bought at 98 to yield £3.6s. 0d. per cent., *London and Home Counties Electric* 3¼ per cent. 1955/75 offers almost 3¼ per cent. at 101¾, and *Mersey Docks and Harbour* 3½ per cent. 1975/85 is obtainable at 100¼ to yield £3.4s. 0d. per cent.

Amongst Overseas stocks *Canada* 3½ per cent. 1930/50 yields £3. 8s. 6d. per cent at 101¾, while *Australia* 3¼ per cent. 1964/74 can be obtained at 100, to yield 3¼ per cent. *New South Wales* 3½ per cent. 1930/50 is also attractive at 100¾.

New Issues and Conversions

An outstanding event has been the Australian Government conversion offer involving the issue of £22,384,000 3¼ per cent. stock. This is the biggest and cheapest refunding operation carried through by Australia, the stock to be converted being a 5 per cent. loan redeemable between 1935 and 1945. Since October, 1932 the Commonwealth Government has undertaken nine important conversion operations. Including the present operation stocks totalling almost £147,000,000 have now been converted at an annual saving in interest of £2,457,000 sterling. Further conversions can be expected before this year end.

The cash subscription lists opened on Friday, and there is no doubt that the whole issue will be heavily over-subscribed. In view of the relatively early redemption date between 1956 and 1961—the new stock should make a good investment if obtainable at anywhere round par.

Another interesting issue has been that of £350,000 3 per cent. stock at 100½ on behalf of the Bexhill Corporation. Subscriptions for this issue exceeded £10,000,000, thus showing the large quantity of money searching for investment. The scrip is now quoted at almost 2 premium. Loans are to be made this week on behalf of Blackburn, Aberdeen and Hull Corporations. The Aberdeen loan is to be one of £1,000,000 at 3 per cent. interest, the issue price being 101 per cent., with redumption between 1965 and 1986. This constitutes a record, as Aberdeen is the first Municipality to contract a maximum 50 year loan at 3 per cent. interest during this century.

Last week I referred to the interesting conversion offer to be made by the *General Electric Company* to its debenture holders. The terms now announced are 45 new £1 ordinary shares plus £3. 10s. in cash in exchange for each £100 of debenture stock, repayable at 110. This involves a moderate bonus based on the current price of the ordinary shares.

Whitehall Electric Investments is to redeem about £2,700,000 6 per cent. debenture stock on 30 March next, but the method of financing this operation has not yet been announced.

I hear rumours that *Birmingham and District Investment Trust* is to redeem its 6 per cent. £1 preference shares at 22s. each, and to replace this issue at a lower interest rate, possibly 4½ per cent. The capital involved is almost £1,120,000.

Foreign Bonds

I learn on good authority that the British Treasury may very soon consider the question of partially removing the present ban on the issue of foreign loans. If this does happen, it will certainly ease the investment position in this country, although borrowers will have to be very sound before much public support will be forthcoming.

As pointed out above, Brazilian bonds have made a remarkable recovery in the last few days: And for those investors prepared to hold for a few years, I consider that certain Brazilian stocks offer scope for good yields, together with capital appreciation. So far as I can gather, the internal position of Brazil is improving steadily; but unfortunately there may be still further difficulties in meeting foreign loan commitments, owing to exports not showing a sufficient surplus over imports. Sooner or later, however, this position should be righted.

Apart from the various funding loans, interest on other Brazilian Government and Provincial stocks is only being partially paid until 1938. When the arrangement was made, all the bonds were graded and different percentages of the total interest are paid each year, tht annual amount increasing between 1935 and 1938. Even on the reduced interest payment basis Brazilian 4½ per cent. 1888, 4 per cent. 1889, and 4 per cent. Railway Rescission stocks can be bought at around 17, to yield an average of about 7½ per cent. Actually, however, the 5 per cent. 20 year and 40 year funding loans of 1931 are the safer purchase, the respective prices being 69½ and 59½, to yield 7¼ per cent. and 8½ per cent.

Promising Debentures and Preference Shares

Continuing my policy as outlined a week ago of selecting promising debentures and preference shares, I now draw attention to *Borax Consolidated* 4½ per cent. second mortgage debentures yielding 4⅝ per cent. at 104. As these debentures cannot be redeemed below 103, there is very little likelihood of a loss on redemption. Interest requirements of £67,500 were covered in the last financial year with a surplus of £51,000. *British Ropes* 4½ per cent. first mortgage debentures also give a satisfactory yield of over 4¼ per cent. at 105, while they cannot be redeemed before July, 1944, and then only at 102½. Interest requirements of £38,250 have been covered almost four times by average profits of the last 4½ years. *Yorkshire Amalgamated Collieries* 4¼ per cent. first mortgage debentures also yield 4¼ per cent. at par. Over the last five years average profits of £133,000 have covered interest requirements of £53,125 about 2½ times.

Preference shares with prospects are *Barrow Hepburn and Gale* 6 per cent. £1 shares yielding 5¾ per cent. at 21s. 3d. While this leather manufacturing company has not done exceptionally well in recent years, its profits are now improving, and as the preference shares can participate with the ordinary for a further 3 per cent. dividend, they are a promising lock-up. Sooner or later the metal trades are bound to do better and in this connection *Imperial Smelting* 6½ per cent. £1 preference shares are under-valued on prospects at 23s. 9d. to yield 5½ per cent. Later on I give selections of shipping preference shares with possibilities.

Industrial Ordinary Shares

London Brick Company and Forders announced a reduction of 3s. per 1,000 in the price of its bricks. On this announcement the £1 ordinary units have fallen to 87s., but bearing in mind that the company anticipates recovering most of this reduction through decreased manufacturing costs, I consider it to be a bull point in the long run. Sooner or later this price reduction is bound to affect smaller brick companies.

Persistent buying in the tobacco group of *Gallahers*, *Godfrey Phillips* and *Imperial Tobaccos* has tended to dry up. I understand that the leading operators intend transferring their attention in the near future to *Carreras* ordinary shares, which have rather lagged behind in the upward movement of the last month or so. Carreras £1 A shares can now

be bought at £8⅛ and the 2s. 6d. B shares at 20s. 6d. Both issues rank equally and as the yield is 4⅜ per cent. on last year's dividend of 35 per cent., there is obvious scope for a sharp rise. It is generally understood that the company is benefiting from improving trade, and has now recovered from the set-back experienced after the coupon business was stopped.

Prospects for Transport Undertakings

Continuing my review of the outlook for various industries during the current year, I will first of all deal with the railway, motor and aeroplane manufacturing, and shipping industries.

For the last two months Home railway stocks have been weak, as previous optimistic estimates regarding the possible results for 1934 have had to be modified. Furthermore, recent weekly traffic returns have not been encouraging. The dividend announcements are due towards the middle of February, and I rather think these will be better than recently been expected. Traffics for 1934 showed an increase in the four main lines of over £5,000,000, but the whole of this amount cannot be taken as an increase in net revenue. On the whole, I should think that recent pessimism has been overdone and that the ordinary stocks of *London, Midland and Scottish,* and *Southern* Railways are worth buying for higher prices a year hence.

Judging by the sharp increase in profits from £139,335 in 1932/33 to £163,789 for the year to 31 October, 1934, *Scottish Motor Traction* has experienced a very good year. After placing £50,000 to reserves, the dividend is maintained at 10 per cent., and the carry forward increased by £2,684 to £60,080. The London Midland and Scottish, and London and North Eastern Railway Companies have a large interest in the company, which operates services throughout Scotland.

Turning to the motor industry, I have no hesitation in saying that the prices of practically all the leading shares are now too high despite recent satisfactory trade advices. In recent weeks speculative activity has been particularly strong, and I advise all readers to adopt a very cautious attitude. The safest investment is *Rolls-Royce* ordinary stock, but as the yield at £6 per £1 unit is under 3 per cent. on last year's distribution of 17 per cent., there will have to be a sharp increase in profits to justify existing levels. The most interesting speculation is *Ford Motor* £1 ordinary 34s.

In recent months we have seen a large increase in the number of publicly-owned aeroplane manufacturing companies, while additional issues of capital have lately been made on the part of some of the older concerns. One of the leading companies, *De Havilland Aircraft,* reports a reduction of £9,500 in trading profits for the year to 30 September, 1934. Net profits of £50,994 compare with £63,440 in 1932-33, but the dividend is maintained at 7½ per cent. This, in view of increasing competition, is what can be expected in the case of many of the aircraft manufacturing companies.

As a speculation the most promising shares seem to be the 5s. ordinary of *D. Napier & Son,* the well known manufacturers of aero engines. No dividend has been paid on these shares for the last three years, but in view of recent developments and the strong financial position, the shares have prospects at 10s. 6d.

Associated with the motor industry, *Dunlop Rubber Company* is one of the leading industrial concerns in this country. In the past three years a remarkable increase in profits has been seen ; and judging by present trade advices earnings for 1934 are expected to show further expansion. The £1 ordinary units are a popular market counter, offering prospects at 52s. Another company dependent on the prosperity of the motor industry is *Joseph Lucas,* whose £1 ordinary shares are a good investment at 66s.

Owing to the large falling off in world trade and the lowness of freight rates, the shipping industry has recently passed through a very difficult time. Sooner or later, however, world trade will again expand ; and for those with faith in the future the equity shares of *Peninsular and Oriental Steam Navigation,* and *Furness Withy & Company* are worth picking up at 18s. 3d. and 16s. 9d. respectively. Both companies are in exceptionally sound financial positions, while they are still able to earn profits.

Preference issues with dividends reasonably covered are *British India* 5½ per cent. stock yielding 5⅜per cent. at 10½, *Clan Line* 5½ per cent. cumulative second redeemable £1 shares offering 5 per cent. at 22s., and *Union Castle* 6 per cent. £1 shares at 25s. to yield £4. 16s. 0d. per cent.

As a speculation *Royal Mail Steam Packet* 5 per cent. debentures are worth buying at 55. Under recent proposals the assets of this concern are to be transferred to a Realisation Company, holders of each £100 5 per cent. debentures being allotted £50 of 5 per cent. income debenture stock and 15 £1 ordinary shares. Inside interests calculate that in two years' time the income debentures will be repaid at 110 per cent., while the ordinary shares should be worth par.

Base Metals

In March, 1931, control of the tin industry was first brought into force. At that time visible stocks of the metal were about 52,000 tons, while the price was £118 per ton. At the end of 1934 stocks had been reduced to about 17,000 tons and the price was up to £228. This satisfactory state of affairs has been brought about by strict adherence to restriction and the operation of a "buffer pool," which has evened out fluctuations in the supply and demand. For the past year the price of tin has varied very little round an average of £230 per ton, while producers have been in the fortunate position of showing increasing profits, despite a restriction of about 60 per cent. in their output.

The present restriction scheme operates until 1936. Although there have been rumours to the effect that it will not be renewed, I am confident that the present scheme will not be allowed to drop. In recent weeks I have had conversations with leading members of the tin industry, who assure me that it would be fatal to the prosperity of the industry if control were abandoned.

Rather belatedly certain investors are awakening to the fact that there are many tin shares offering very high yields and good security, together with prospects. My particular recommendations are *Kamunting Tin Dredging* 5s. shares at 13s. 3d., *Associated Tin Mines of Nigeria* 5s. shares at 8s. 3d., and *British Tin Investment Corporation* 10s. shares at 12s. 6d. For the year to June 30, 1934, *Kamunting* paid 20 per cent. ; for the year just completed British Tin Investment a total of 7½ per cent. ; and so far on account of the year to December 31 last, Associated Tin has paid two interim dividends totalling 10 per cent.

There have lately been discussions and rumours of conferences to the effect that a world scheme for restriction of copper output will shortly be made. There is every possibility that this may come about, but as the Rhodesian copper companies are in such a strong position, American producers will have to make considerable concessions before agreement can be reached.

Apart from the question of any restriction, it certainly appears that the consumption of copper will tend to increase with expanding trade. Hence, Rhodesian copper mining shares have promising possibilities. For those desiring the utmost safety I advise *Mufulira Copper Mines* 5½ per cent. debentures at 101, together with *Selection Trust* 5½ per cent. debentures at 102. In December last

Rhokana Corporation, the leading Rhodesian copper producing company, issued 1,500,000 5½ per cent. £1 redeemable preference shares at 21s. These can now be obtained at 22s. to give the satisfactory yield of about 5 per cent. For the year to 30 June, 1934, profits of £389,000 were considerably in excess of preference dividend requirements.

Amongst equity shares, *Roan Antelope Copper Mines* 5s. ordinary at 25s. are the most promising, although *Rhodesian Selection Trust* 5s. ordinary at 9s. have scope for substantial appreciation. A further method of taking an interest in this industry is through the 15s. ordinary of *British South Africa Company* at 22s. 6d., and *Tanganyika Concessions* £1 ordinary at 12s. 6d.

Market Pointers

As *British Celanese* is further reducing the dividend arrears on the 7 per cent. preference capital; the speculative possibilities of the second preference shares, now 15s. 9d., are increased.

My recommendation of *Jute Industries* preference shares a week ago was rather premature as the Chairman was by no means optimistic at the meeting. I rather think, however, that his remarks were too pessimistic, as the Company should undoubtedly benefit from the sale of its large stocks during the current year at higher prices. On the fall in the preference shares to 5s. 3d. a better buying opportunity is presented.

In order to provide funds for commencing production, *Atta Gold* is increasing the authorised capital by £50,000 to £150,000. The new 2/- shares are to be offered to shareholders at 4s. in the proportion of one new share for every two now held. On this announcement the old shares fell to 7s. 6d., but recovery should soon take place.

There has been some good buying recently of the £1 shares, 10s. paid-up, of *World Auxiliary Insurance* on the assumption that the dividend for the past year will be increased from 9d. per share tax free to 1s. per share tax free. Even if there is no increase in the dividend the shares will still yeid 3 per cent. gross at current price of 32s.

Amalgamated Metal Corporation £1 ordinary shares have recently been in good demand on attention being drawn to their relative undervaluation, the yeild at present price of 20s. 9d. being 3⅞ per cent. on the basis of last year's 4 per cent. dividend. This amalgamation of the leading firms in the bare metal business stands to benefit from improving consumption of metal at increasing prices.

It is expected that permission to deal will be granted in the near future in the shares of *J. & J. Colman*, the famous manufacturers of mustard. The opening prices are likely to be about 75s. for the ordinary and 25s. for the 5 per cent. preference shares, to give yields of about 4 per cent. each. Both issues should become popular investments, as until recently all the capital was privately held.

The index of traffics of Cables and Wireless shows a sharp increase for December, the figure being 80.7, against 71.3 in November, 1934, and 76.7 in December, 1933. These index numbers represent estimated monthly receipts from cable traffic as related to comparable traffics for the year 1929, the average. The index is based on a working day monthly figures being reduced to a working day average during 1929 of 100.

WALL STREET IN AIR MAIL WEEK

GOLD CLAUSE CASE UPSETS STOCKS & SHARES

By F. ROCKE

The following report of Wall Street in air mail week is prepared by our correspondent in London, who is in a position to appraise developments in the U. S. A. We have preferred this arrangement to a direct report from New York owing to the inevitable delay in transit and the consequent staleness of the account.

Wall Street was overshadowed during the week by tremendous uncertainty of the Supreme Court decision on the Gold Clause cases and the consequences of its going against the Administration. It was believed that the Administration would be obliged to revalue the dollar at its former gold parity. Interested speculators were busy accentuating this fear; and when it was fairly widespread, the value of each scrip was worked out to the logical consequence of such overvaluation. Dollar bonds which carry the gold clause under dispute put in a number of points and others reflected the hopeless economic outlook which would follow the scrapping of the New Deal. The recovery from the panic was not so sharp as its development. At the end of the week, however, there is a better appreciation of what is involved. There is less readiness than before to believe that an adverse decision must necessarily be followed by a revaluation of the dollar. It is expected that the Administration should be able with the support of Congress to find ways of circumventing the interference of the judiciary in a primary responsibility of the Legislature and the Executive. The tendency of operators is to watch Washington until the outcome of the dispute is known.

As pointed out already, in the Bond Market there were sharp advances in the prices of bonds containing the Gold Clause. Government issues containing the clause went to new heights for the year; and in the Foreign Bond Market increased interest in multiple currency Bonds resulted in sharp rises in several German and Scandinavian issues. On the other hand, non-Gold Clause bonds declined, with the result that a difference amounting nearly to a point has developed between the Treasury gold clause and non-gold clause Threes.

A number of the more active Rails and Industrials closed from 1 to 2 points down and would have been lower still but for a rally towards the end. Homestake Mining fell by 7 points on January 12.

A darkspot in stocks was Consolidated Gas of New York which fell on Mayor La Guardia's insistence that domestic power rates be cut by 20 per cent. immediately as evidence of the company's good faith.

The oil situation has recovered from the upset caused by the Supreme Court decision; and oil interests are increasingly confident that any sharp increase in the East Texas output is unlikely, until the future policy of the Federal Government and the action which the Congress will take have been made known. Strong efforts will, undoubtedly, be made to replace the control legislation which was held unconstitutional.

As a result, the mid-Continent gasoline market is much firmer. Meanwhile, Mr. Ickes, the Oil Administrator, is making a careful survey of the effect of the present situation on smaller enterprises in the industry.

There is considerable optimism about the prospects of the chemical industry in the United States this year, and American Cyanamid "B" stock has definite attractions as a cheap medium through which to take an interest in recovery in this branch of trade. The American Cyanamid Co. manufactures, and sells through its own marketing organisation, a wide range

of chemical products, including metallurgical chemicals, fertilisers and solvents, certain building materials, pharmeceutical products and dyes. It is therefore expected to benefit from increasing activity in a large number of industries.

In February 1934, there was a distribution of 25 c. per share on the Common Stock, and the first six months' earnings were substantially better than in 1933. The third quarter, however, saw a set-back, and nine months' earnings at 62 c. per share were only 1 c. better than in the corresponding period a year earlier. Meanwhile dividends were suspended, until at the beginning of December, a 10 c. payment was announced. This was accompanied by the statement that 10 c. was not to be regarded as a regular rate, that, in fact it would be paid quarterly if business were to continue at its current level. The Company is by no means in a static stage. It is still developing and the probability of substantial future growth enhances the attractions of the share. The "B" Stock is quoted on the curb at 16½, with a high 21½ and a low of 14¾ in 1934.

The Commercial Solvents Corporation can also be recommended both for its immediate prospects this year and its future potentialities. It has given further proof of its vitality and progressive management by acquiring with the Corn Products Refining Company two molasses concerns. It is too early yet to assess accurately the importance of this development; but it appears to be of no little significance as the purchasing companies hope to obtain a leading position in this field.

With regard to Utility Company's Shares, it is almost certain that the Administration will introduce legislation into Congress in the near future for the regulation of utility holding companies. There is, indeed, a party which wishes to see the holding company abolished entirely. Possibly, constitutional difficulties, if they become acute, will force this type of legislation into the background, but it is just as well for utility stock holders to know where they stand. It would be well to give some details here of the "Washing Plan" which is so much so before the public since its application to electricity companies was first proposed in New York.

In 1925 the Potomac Electric Power Company which serves the Washington District agreed to divide its profits with consumers after 7 per cent. had been earned on the value of its properties, which was placed by agreement at $32,500,000. A modification of the plan was introduced in 1930, so that half the profits between 7 per cent. and 8 per cent. three-quarters between 8 per cent. and 9 per cent. and five-sixths over 9 per cent. must go towards rate reduction.

Between 1925 and 1934 the number of consumers has risen from 85,600 to 161,000, the average rate has fallen from over 6 c. to 2.42 c. per kilowatt hour and the value of the company's properties, on which the per cent. is calculated, has risen to $67,500,000 or more than doubled. As the expansion has been financed out of profits, the return on the original investment is large.

It seems probable that the final settlement of the utility dispute will be on lines such as these. The Administration's objection is not to utility companies as such, but to holding companies whose structure is "pyramided," so that an operating company is in some cases many times removed from the concern in which the public is actually interested. The most dangerous company, in which to hold stock is that which is farthest from the generating machine and the safest is one the stock of which is immediately represented by tangible and useful assets, such as building and machinery.

In connection with the possibility of a building boom the U. S. Pipe and foundry Common Stock is a company which should be mentioned.

The Capital is composed of 599,810 Shares $1.20 Cumulative First Preferred Stock and 12,000,000 of $20 par Common Stock. The Preferred Dividend requirement of 60 c. per share was not fully earned in the first six months of 1934, but at 52 c. earnings were considerably better than the net loss of $202,141 shown in the corresponding period of 1933.

It appears that the company at present depends on works developed with P. W. A. funds for between a half and three-quarters of its business. But quite apart from increased activity in this sphere, the second half of 1934 should be considerably better than the first. It is thought that in the full year the preferred dividend requirements have been covered, and that something has been earned towards the 50 c. common dividend which has again been paid.

At the present price of around 20, there is yield of only 2½ per cent. But the financial position of the Company is strong with a working capital of $12,650,000 at the end of 1933. The price range was 33—15½. If one is buying on prospects, this scrip has its claims.

The steel and automobile industries have entered 1935 with a cheerful, and withal, reasoned optimism. Steel mill activity has shot up in the past few weeks, and at its present level it has very nearly touched the high record of the New Deal period. This is hardly surprising, as the improvement in the steel industry was confidently looked forward to even during the autumn of 1934 when production fell to very near 20 per cent. For it was known that the main reason for such a set-back was the delay in the demand on account of the Automobile Companies, which had postponed the production of their 1935 models to a later time than usual. Now that the demand from Ford, General Motors and Chrysler has increased, the steel industry has started to increase its production. But it must be mentioned that a part of the increase that has been effected so far represents a provision for the contingency of a labour strike and the consequent hold up of production. To the extent that fears of labour troubles might be belied in future, the steel industry might prove to have produced more than is necessitated by the probable state of demand in the coming months.

The outlook of the steel industry is not easy to define, from the point of view of the investor. For the steel industry is bound up with the national economy as a whole. And the prospects are difficult to define, particularly at this moment when owing to the gold clause pending before the Supreme Court, the whole of the N. R. A. may be said to be on the brink of the precipice. The investor, of course, would do well not to exaggerate the effects on the N. R. A. of any decision that the Supreme Court might deliver. But, even with this uncertainty eliminated, the task of assessing the prospects of American economy is not rendered easier. All that the investor can do, therefore, is to view the shares of steel companies, either from the standpoint of a limited period or from the standpoint of the longview. Steel Company shares are never good for purposes of medium term investment.

Business Pointers: Current business news is extremely good. Steel mill activity is 49.0 per cent. of activity against 44.5 per cent. last week. The price of heavy melting steel scrap has been advanced by 50 c. per ton.

Loadings of revenue freight for the week ended January 5 totalled 498,100 cars. This represents an increase or 73,000 cars compared with the previous week and a decrease of 1,800 cars against the corresponding week of last year.

Bank clearings in the week ended January 16 totalled $5,696,360,000 against $5,372,940,000 in the previous week and $4,162,180,000 in the corresponding week last year.

The Bureau of Labour Statistics whole sale commodity price indices for the week ended January 12 were 78.6 for all commodities and 77.2 for farm products, against 71.7 and 58.6 a year earlier. The present figures are the highest since December 1930.

Worh—While Investments :

INDIA

TATA STEEL SHARES

(By 'Watchdog')

While the Tata second preference shares were quoting a few points above par, *Indian Finance* strongly recommended them as an investment which combines the safety of bonds and the attractiveness of equity shares. The opinion was then advanced that a rise up to Rs. 180 might be taken as certain.

The latest price for the second preference shares is Rs. 172. It must be added that the shareholders received a dividend of Rs. 15 on the working of 1933-34. This means, that the forecasted limit of Rs. 180 has now been exceeded by Rs. 7. We have received considerable enquiries as to the future trend of these shares.

Our Bombay correspondent has been consistently "tipping" the ordinary shares in the last four months. They have risen by leaps and bounds ; and the price of the ordinary shares has nearly doubled itself to Rs. 141. Is this sensational rise justified? What does the future hold for these shares?

Considerable activity has taken place in the steel shares in the Bombay share bazar. Owing to quick telephonic communication between the three presidency centres, large blocks of steel shares have been purchased by investors and speculators in Calcutta and Madras. The future of steel shares is, therefore, of great interest not only to the Bombay stock exchange but other important financial centres.

It is, accordingly, useful to examine the position as regards the arrears of dividend on second preference shares and the bearing of this factor on the dividend possibilities of ordinary and deferred shares.

Unofficial but fairly reliable reports indicate that the results for the nine months beginning with April 1934 have been extremely satisfactory. The Jamshedpur steel plant has been working on maximum capacity. The sales organisation has been made trimmer and more efficient, to meet the bigger strain involved. Surprising as has been the reduction in the production cost over the past few years, further economies have been effected ; and we understand that the saving per ton of steel, effected in the current working year of the Company, is sufficient to make up for the excise duty. Our Bombay correspondent informs us that British steel interests are considering the question of an increase in the sale price of steel. Taking all these factors into consideration, it may be confidently expected that the 1934-35 results, which will be announced in May or thereabout, are bound to be extremely satisfactory.

The gross profit of the Company for 1934-35 will, it is expected, exceed Rs. 3 crores. It may be that the full profit may not be disclosed. The general anticipation is that the Directors would recommend the payment of Rs. 21-8, being the arrears of dividend on second preference shares from 1927 onwards. It means, that the dividend for the current year and the next will be cleared off in 1935-36 accounts.

Unless something unforeseen happens like a drastic reduction in the price of foreign steel (and if this happens, the Government of India are bound to take remedial steps immediately), the profit for 1935-36 should be even more favourable than that for 1934-35. For purposes of calculation, however, we may assume that the Company will be making Rs. 3 crores in 1935-36. In which case, the distribution will be somewhat as follows:

1935-36 Allocations:—

Depreciation	Rs.	80 lakhs
Interest charges, Office expenses etc.	,,	40 ,,
First Preference dividend ...	,,	4·5 ,,
Dividend of Rs. 15 per share on 2nd preference shares	,,	105 ,,
Total	,,	229.5 ,,
Balance available for further distribution	,,	70.5 ,,

According to the 1926 scheme, after paying the Preference dividends including arrears from 1927 onwards, 50 per cent. of the surplus is to be used towards clearing off the arrears of Rs. 26 with 4 per cent. simple interest. The other fifty per cent. is to be used for payment of a non-cumulative dividend of 8 per cent. and then 25 per cent to Deferred shares. Any further balance available is to be divided as follows:—

50 per cent. thereof as additional dividend on Ordinary shares and 50 per cent. thereof by way of additional dividend on Deferred Shares.

If roughly Rs. 35 lakhs goes to the Second Preference shareholders (Rs. 5 more per share), the balance of Rs. 35 lakhs is to be divided as follows:—

	lakhs of Rs.	
At the rate of Rs. 6 (8%) per Ordy. share (350,000 Ordy. shares)	21	
At the rate of Rs. 7-8 *i.e.* 25% (48,750 Deferred shares) ...	3.5	approximately
Total ...	24.5	
Balance about ...	10.5	

Out of which, Rs. 5.25 lakhs will go towards Ordinaries and Rs. 5.25 lakhs towards Deferreds, *i.e.* an additional dividend of about Rs. 1-8 on Ordinary shares and Rs. 10 per Deferred share approximately.

On the basis of the above estimates, the following dividends for 1935-36 working may be expected:—

		per share
Second Preference	Rs.	20 0 0
Ordinary	,,	7 8 0
Deferreds	,,	17 8 0

The paid-up value per ordinary share is Rs. 75. A dividend of Rs. 7-8 per share would, therefore, work out to 10 per cent. In these days of decreasing yields on good investments, a return of 5 per cent. tax-free return must be deemed more than adequate on an equity share. There is, therefore, no reason why ordinary shares should be quoted less than double their paid-up value. The market is confidently looking to the attainment of a price-level of Rs. 150 in the very near future. And why not Rs. 150? Recent rise has been far too rapid. May-be, profit-taking may occasion slight set-back. Purchases at every set-back should prove wise.

As for second preferences, the position is that Rs. 21-8 towards arrears will be paid within a year or two ; and a further sum of Rs. 32 or slightly more in the following quinquennium.

From the present price of Rs. 171, (apart from current dividend of Rs. 7-8 per year) Rs. 53-8 will be the receipts on account of arrears. The net price to a shareholder will, therefore, work out to Rs. 117-8. For a preference share giving a yield of 7½ per cent., the market quotation should be, according to current trends of yields, nearer Rs. 150. There is, therefore, a further margin of rise in the second preferences to the extent of Rs. 30.

The deferreds are far too speculative. In any case, there is strong buying pressure the moment the market touches Rs. 600. This seems to represent the lowest limit under present conditions. Those who love a gamble can, perhaps, have a 'go' at these shares if prices react to this level.

GREAT BRITAIN

LONDON BRICK COMPANY AND FORDERS.

During the past 12 months the building industry has seen rapid expansion, and from present indications it certainly appears that there is not likely to be any decline for at least another year or two. Naturally, brick manufacturing companies have reaped benefit from this development. At one time last year the demand for bricks was far in excess of supply, but with recent extensions there is now not the same shortage. As was only to be expected, there have been a number of new companies floated, many of which will probably find it difficult to earn profits.

The leading company in the brick trade is London Brick Company and Forders, which was originally formed in 1900 as B. J. Forder & Son, Ltd., the name being changed to its present title in 1923 on amalgamation with the London Brick Company, Limited. Since 1923 the Company has acquired 13 other brick businesses the latest acquisitions being Millbrook Brick and Tile Company in 1927, Plowmans' Brickfields, Arlesey Brick Company, and Hicks & Company, Fletton, in 1928, and the Bletchley Brick Company in 1929. In addition, it owns the entire issued share capitals, totalling £500,000, of Itter's Brick Company and Beeby's Brick Company. The balance that valuation of the these investments must be very conservative at present the authorised and issued capital is £2,000,000, divided into £400,000 8 per cent. cumulative preference and £1,600,000 ordinary stock. Both issues are dealt in in the form of £1 units of stock. The capital has been raised to its present amount by the issue during 1928 of 94,809 preference shares at 24/6 per share, while recent issues of £1 ordinary shares at par to ordinary stockholders have been 150,000 in March 1928, 250,000 in November 1928, 200,000 in July 1929, 200,000 in November 1929, and 200,000 in August 1934. Apart from the last issue, these shares were issued to finance the purchase of additional businesses. The shares issued in August last were to provide capital for reconstruction and extensions to the Company's properties in order to cope with increasing business.

Preference dividends are paid on January 1st and July 1st, while Ordinary distributions are made quarterly in March, June, September and December.

The profit record is excellent, the figures for the last 10 years ending 31st December, 1933, speaking for themselves. Considering the adverse conditions during 1932, it was not surprising that profits for that year showed a set-back. Recent results are as follows:—

	Net Profit after Depreciation.	Pref. div.	Ordinary Earned.	percentage Paid.
	£	£		
1924 ...	187,809	162,037	43.3	A. 15
1925 ...	257,277	232,862	46.8	B. 20
1926 ...	259,402	234,987	43.9	20
1927 ...	250,887	226,472	40.9	25
1928 ...	208,330	176,330	20.2	20
1929 ...	273,000	241,000	20.0	20
1930 ...	313,143	281,143	20.1	20
1931 ...	312,868	280,868	20.0	20
1932 ...	243,135	211,135	15.1	15
1933 ...	312,612	280,612	20.0	20

A. Plus capital bonus of 20 3/10%

B. Plus capital bonus of 13 11/53%

Net profits given above are after charging transfers to depreciation reserve of £40,000 per annum in 1924, 1925 and 1926, £75,000 in 1927, £125,000 in 1928, £150,000 in 1929, and £175,000 in each of the last four years. In addition, goodwill of £60,000 was written off during 1926 by a transfer from surplus profits. It will be seen that disclosed earnings for the last six years have been barely sufficient to cover ordinary dividends, as during this period undistributed profits have only increased by £6.088. In view of the conservative management of the Company it would certainly appear that the published earnings are controlled in so far as secret reserves are probably made before the net profit figures are disclosed. This is all to the good of shareholders. In 1930 it was disclosed, however, that £40,500 of dividends received from subsidiary companies were not constituted to profits but were used to write down the value of investments in these concerns.

Turning to the balance-sheet, the figures for the two years ended 31 December 1933, are summarised below, these being given after making adjustments for the final dividend appropriations:—

ASSETS—	1933.	1932.
	£	£
Properties, etc.	2,106,157	2,056,885
Shares in Subsidiaries ...	674,176	674,176
Liquid Assets	1,036,920	825,755
Total ...	3,817,253	3,556,816
LIABILITIES—		
Capital: Preference	400,000	400,000
Ordinary	1,400,000	1,400,000
Current Liabilities	542,495	457,671
Depreciation Reserve ...	1,250,000	1,075,000
P. & L. Balance	224,758	224,145
Total ...	3,817,253	3,556,816

If the present allocations to depreciation reserve are maintained, it will mean that a sum sufficient to cover the valuation of fixed assets at 31 December 1933 will be accumulated in five years' time. This is an ultra conservative attitude, unfortunately not adopted by a number of companies. Obviously, it cannot be continued indefinitely, as if no further extensions to fixed assets were made in several consecutive years, the reserve might possibly become larger than the value placed thereon. This policy certainly leads to the hope that a capital bonus will again be distributed to ordinary shareholders in the near future.

Reverting to current prospects, production of bricks for the past year will probably have been somewhare about the total productive capacity of 1,200,000,000. In an interim statement, the directors informed shareholders that good progress was made during the first six months of 1934, when the figures of production and delivery exceeded anything previously attained.

In recent years the Company's policy has been to distribute quarterly dividends. On account of 1934 three interim ordinary dividends of 5 per cent. each have been paid. Announcement of the final dividend will be made towards the end of the next month, and as profits will certainly have shown further expansion, it is fully expected that a higher payment than 5 per cent. will be forthcoming. Even, however, if the total distribution is only made up to 20 per cent. for 1934, the £1 ordinary units will yield almost 4.6 per cent. at Rs. 88. This yield compares very favourably with that offering on the shares of other leading industrial companies, so that there is obvious scope for further appreciation. In fact, it would be difficult to find a more promising industrial ordinary equity, particularly in view of a possible capital and further of capital on bonus terms.

Preference dividends require only £32,000 per annum. As this payment was earned almost ten times over during 1933, the £1 units are almost a giltedged investment, a fact which is fully appreciated by investors. At their current price of Rs. 39 these preference units yield just over 4 per cent.

R. GORDON CUMMINGS.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

Calcutta, Feb. 1.

After a prolonged activity for weeks together, rather dull conditions have obtained in the Stock Exchange during the week under review although there was no selling pressure in any counters. Government securities were easier on the whole, while in the majority of instances, Jute Mills Shares were appreciably below the best. Cottons remained neglected and coals were definitely weaker. Among miscellaneous Industrials Public Utility Companies Shares again met with a good demand, while Engineering and Sugar Sections were also steady. Teas continued dull and uninteresting.

Government securities.—Giltedge section ruled easier, especially the long-dated issues which have been freely on offer. 3½% Government Paper from a quotation of 98-2 came to business at one time on Thursday down to Rs. 97-4. At the time of writing the price recovered a few annas to Rs. 97-10. 4% loan 1960-70 came back to Rs. 110 and 5% loan 1945-55 to Rs. 117-4. The enquiry for some of the short and medium-dated Loans however continued, but business was restricted owing to shortage of scrip. The Bank rate remained unchanged at 3½%.

Fixed interest bearing securities.—The demand for Preference Shares continued as usual, and a fair business was reported. In several cases higher prices were registered. Apart from Jute Mills Preference Shares, which found buyers at firm rates business was reported in Allahabad Bank (Preference) at Rs. 133, Darjeeling-Himalayan Railway (Preference) at Rs. 105, Indian Standard Wagon (Preference) at Rs. 128, B. I. Corporation (Preference) at Rs. 156, Indo-Burma Petroleum (Preference) at Rs. 119.

Fixed interest bearing securities.—Bengal Paper (Preference) at Rs. 140 and Titaghur Paper (Preference) at Rs. 160. Among Debentures there were buyers of short-dated Calcutta Port Trust issues at last levels.

Other investment stocks.—Imperial Bank's Shares are the turn easier. The fully paid up issues changed hands and Rs. 1,600 and contributories at Rs. 400, Central Bank's Shares are marked at Rs. 38-12. Among Insurance, New India Assurance alone came in for a deal and changed hands at Rs. 44-12.

The demand for Railway Shares continued, as usual, and a fair turn over resulted. Strong enquiry was in evidence for Government guaranteed issues, while with the exception of one or two other shares were difficult to sell.

Among other Transport Companies shares, Calcutta Tramways (ordy.) improved to Rs. 21-8 while Indian National Airways were slightly easier at Rs. 9-12. Bengal-Assam Steamship (ordy.) recorded a deal at Rs. 227, India General Navigation and Railways kept steady at Rs. 126 and Port Shipping at Rs. 16-4.

Cottons.—Dullness continued to rule in this section and only a very limited trade was passed. Kesoram (ordy.) changed hands at Rs. 4-8 and Mohini at Rs. 11-4.

Coals.—Rather less business was reported in coal shares during the week under review and prices generally were appreciably below the best as a result of the publication of the acceptance of the Railway Coal tenders and owing to a Press Report that the Government of India has finally abandoned the coal restriction scheme and that the surcharge on freight has been reduced only by 2½%

Coals.—Prices fell away sharply on Thursday morning on the above news and Bengal was marked down to Rs. 272, Burrakur (ordy.) to Rs. 14, Equitable (ordy.) to Rs. 37, Hurriladih to Rs. 15. New Manbhoom to Rs. 65 and Sendra to Rs. 15. At the time of writing prices recovered to some extent owing to the return of some confidence and Bengal was marked up again to Rs. 180, Burrakur (ordy.) had buyers at Rs. 14-4, Equitable (ordy.) were moved up to Rs. 37-12 and Sendra to Rs. 15-4.

Jutes.—Inspite of the firmness in the prices of Hessians, Jute Mills shares were comparatively easier presumably due to overbought position. Howrahs and Kamarhattys—the two barometers fluctuated within narrow limits. The former after opening at Rs. 64-10 on Monday moved up to Rs. 65-2 at the time of writing while the later fluctuated between Rs. 665 and Rs. 670.

Prices to-day are appreciably lower among Rs. 100 denominations. Albions was marked down to Rs. 312 from Rs. 327 ; Alliance to Rs. 445 from Rs. 465 ; Anglo India to Rs. 545 from Rs. 555 but again improved to Rs. 552; Belvedere from a quotation of Rs. 488 changed hands at Rs. 472 ; Dalhousie from Rs. 460 was marked back to Rs. 445 ; Gourepore from Rs. 865 to Rs. 845 ; Kankinarrah from Rs. 505 to Rs. 575 ; Lansdownes from Rs. 235 to Rs. 225 but later recovered to Rs. 230 and Standard from Rs. 430 to Rs. 400.

Among rupee 10 stocks all prices are lower than a week ago with the exception of Chitavalsah, which advanced to Rs. 36 from a quotation of Rs. 34 on steady buying. At the time of writing, however, the rate is Rs. 35-4.

Clives are now quoted at Rs. 39 ; Hukumchands at Rs. 16-8 and Nationals at Rs. 29-4.

Electricals.—A considerable amount of attention was paid to Public Utility companies shares. There are buyers of Cuttack Electrics at Rs. 8-8 ; Benares at Rs. 14-2 ; Bhagalpores at Rs. 8-10 ; and Upper Jumna Valley at Rs. 13-4. There are sellers, on the other hand, of Dacca at Rs. 19, Rawalpindi at Rs. 24 and Shahjahanpore at Rs. 7-8. Patna remained steady at Rs. 17-8 and Upper Ganges at Rs. 13-4, while Mirzapore improved to Rs. 7-8 from a quotation of Rs. 7.

Engineering.—A fair business was reported, but in the majority of instances lower prices were registered. Arthur Butler, however, kept steady at Rs. 14 while Bengal Iron was marked down to Rs. 4/10. Burn and Co. (ordy.) was also easier at Rs. 306 and Indian Iron and Steel at Rs. 8. Indian Standard Wagon (ordy.) recorded a deal at Rs. 72/4 while Kumardhubi Engineering (ordy.) and Marshalls were in favour of buyers.

Sugars.—Sugar shares kept steady and fair business was put through. Balarampore changed hands round about Rs. 19/12 ; Buland accounted for a fair turnover at Rs. 13/10. Cawnpore (ordy.) was marked at Rs. 37/10, Champuran at Rs. 22/4, New Savan at Rs. 14/4 and Samastipore Central at Rs. 11/10.

Miscellaneous.—The feature of the week has been the sensational rise in the prices of India Paper Pulp Mills which from a quotation of Rs. 160 during the week-end was moved up to Rs. 185 at the time of writing. Bengal Paper (ordy.) also kept very steady at Rs. 104 and Titagarh Paper (ordy.) at Rs. 21-12. British Ceylon Corporation improved to Rs. 11-14 as a result of strong commodity markets. Midnapore Zemindary (ordy.) receded to Rs. 77 while Bararee Coke kept steady at Rs. 11-14 and Britannia Biscuit at Rs. 8-4. Burma Corporation was unchanged at Rs. 6-7. Hoogly Flours recorded a deal at Rs. 14-8.

Teas.—Only a very limited business was passed in Tea Shares. Bishunath was marked at Rs. 29 while Hattikhira improved to Rs. 28-8. Patrakola on the other hand was marked down to Rs. 945 and Sepoi to Rs. 10. This section was featureless

BOMBAY STOCK EXCHANGE

(By Wire)

(*From our Correspondent*)

Friday Evening, 1st Feb., 35.

Money Market.—Interbank call was fluctuating between 2½ to 3 per cent. in the beginning of the week though closed slightly higher at 3½ per cent.

Government raised the tap from 1/6 5/32d. to 1s. 6 3/18d. and since this rate is practically the highest that could be expected, Exchange market closed quiet with Banks selling T.T. at 1s. 6 9/64d. for near; 1s. 6 1/8d. upto Mid-March; 1s. 6 3/32d. Mid-April. Banks are buying three months bills at 1s. 6 7/32d. Of late the government have been piling up their sterling reserves by the usual weekly purchases of sterling tenders and in addition through intermediate purchases. This policy of piling up sterling balances has affected Government's cash position in Rupees and therefore, Government would be justified in taking recourse to expansion of currency. We feel that expansion is imminent in the near future.

On weak sterling advice Rupee Security market remained easy. 3½ per cent. Paper was down about a rupee at Rs. 97-7-6 though closed at Rs. 97-13; 45-55 were down by more than a rupee at Rs. 117-8; 60-70 lower at Rs. 110 though 55-60 was steady at Rs. 117-4. 1941 closed at Rs. 101-1; 47-50 at Rs. 102-2; 1933 at Rs. 106-1; 1935 at Rs. 101-4; 39-44 at Rs. 107-15; 40-43 at Rs. 109-1; 38-40 at Rs. 108-8; Bombay Development at Rs. 102-10.

Shares.—The whole market was practically dominated by steel shares. At close budlee differences widened on increased bull activity and this was partly due to closing of transfer books of some companies which would necessitate the seller to incur extra cost by way of transfer and stamp fees.

Textiles.—Textile were very active throughout the week though closed lower in sympathy with general trend of market. Bombay Dyeings were done as high at Rs. 982/8 though closed at Rs. 950. Central Indias found good enquiry at levels as high at Rs. 380 though closed slightly lower at Rs. 367/8. It is reported that the Company is earning on the basis of average income of Rs. 10 lakhs per year. Gokaks closed lower at Rs. 227/8; Centuries at Rs. 315/4; Colabas at Rs. 162/8; Kohinoors eased down at close to Rs. 221/14; and New Greats at Rs. 215; Swadeshi at Rs. 245;

Hydro Electrics.—This group ruled steady throughout the week though lost a good number of points at close. Andhras which were around Rs. 1,800 closed lower at Rs. 1,742/8. Hydros dropped from Rs. 180 to Rs. 175. Powers were done upto Rs. 1,560 but closed at Rs. 1,535.

Iron & Steel.—On frenzied buying speculative as well as investment enquiries, Ordinaries soared up as high as Rs. 145 though little lower at close Rs. 138/8. There seems to be a tendency to look up for Ordinaries. Deferreds also had a spectacular rise upto Rs. 690 though closed at Rs. 642/8.

We understand that the Company has bought about 250,000 of 7 per cent. its sterling debentures and the present outstanding amount only about 900,000. Since the company is willing to buy over these Debentures at market price around 111, we consider it better to take this opportunity to liquidate these holdings.

The Production of finished steel for January is expected to be about 51,000 to 52,000 tons. Second Preferences were quiet at Rs. 169.

Cements.—Cement shares were practically neglected on account of the fears of an excise duty in the coming budget. Bundi closed at Rs. 37; Gwalior at Rs. 118½; Indian at Rs. 363/12; Katni Deferred at Rs. 1,377/8; Ordinaries at Rs. 372/8; Okha at Rs. 196/4; Punjab Ordinary at Rs. 25/4; Shahabads at Rs. 361/4; United at Rs. 73/12.

Miscellaneous.—Tata Constructions on reports of the proposed issue of 6¼ per cent. Preference shares eased down from Rs. 90 to 83/12. Belapurs were lower at Rs. 280; Bombay Burmas at Rs. 397/8; Bombay Steam at Rs. 311/4; Telephones at Rs. 116/4; Trams steady at Rs. 167/8. There seems to be good enquiry for Petrols at current price around Rs. 4.

Banks & Insurances.—Bank shares ruled steady though closed at lower rates. Barodas closed at Rs. 17/12; Central at Rs. 38/5; Imperial Fully paid at Rs. 1,577/8; Partly paids at Rs. 391/12; Bank of India at Rs. 121; Union at Rs. 5/12.

Oriental Life were steady at Rs. 4,600; Vulcans at Rs. 7/13 and New Indias were lower at Rs. 45.

MADRAS STOCK EXCHANGE

(*By wire*)

(From our Correspondent)

Madras, February, 1, 1935.

The Securities market has been distinctly weak owing to tight money conditions and 3½ per cent. Paper has fallen to Rs. 97-6 whilst 4 per cent. 1960-70 Loan was practically unsaleable at well below quoted levels. There were good sellers in 5 per cent. 1945-55 Loan and in the other medium dated loans, owing to the higher yied available on Treasury Bills. Short-dated bonds were not enquired for, and business on the whole was restricted. A further fall appears likely, owing to the stringent money market.

The enquiry for 5 per cent. Mysore Loan was good with business done at Rs. 120; 5½ per cent. Mysore Loan was offered heavily at Rs. 112-12 with buyers uninterested. Other Mysore loans were freely available.

Fixed Interest Securities.—Interest in this section was not great. There were no transactions in Port Trust and Municipal Debentures. Whilst amongst Joint Stock Company Debentures, a solitary deal in Cochin Malabars was noted at Rs. 104. There was a good enquiry for Premier Hosiery Preferences at Rs. 10-12 whilst Tata Steel Second Preferences were strengthened to Rs. 171.

Banks.—Banks were easier in sympathy with giltedged. There was no business passing excepting Indian Banks which jumped to Rs. 135 cum-dividend and bonus. The Bank has published an excellent balance sheet and report. Indo Commercial Banks were transacted at Rs. 109 ex-dividend with buyers and closed at Rs. 112.

Mills.—Mills were firm. Buckingham and Carnatics were done at Rs. 214 whilst Premier Hosiery (Ordy.) noted several deals at par. Vasanta Mills have declared a dividend of 9 per cent., free of income-tax, compared with 8 per cent. for the year 1933. They appear cheap at Rs. 115 cum-dividend. Cambodia Mills had sellers at Rs. 13-8 whilst Gokaks after weakening to Rs. 227-8 improved at the close to Rs. 232-8.

Sugars.—This section was dull with no business passing.

Public Utilities.—In this section, there has been a strong enuiry for West Coasts which were done at 8 annas premium with buyers over. Vellores were wanted at Rs. 13-4 whilst Trichy Srirangams were in request at Rs. 200. Rangoon Telephones were done at Rs. 13-8.

Cements.—Cements were steady. Indian Cements and Punjab Cements were reported at Rs. 370 and Rs. 25-4 respectively.

Planting.—In the Planting section, Malankaras were a firm feature rising to Rs. 50 owing to a rise by 75 per cent. in the price of copra. Peria Karamalais were done at Rs. 39 with probable buyers over. Vellamalais had buyers with no sellers.

Miscellaneous.—Tata Steels again monopolised attention. Ordinaries were done up to Rs. 143-8 and Deferreds to Rs. 660 closing quieter.

LONDON STOCK EXCHANGE

The general tone has been rather quiet in most of the sections of the Stock Exchange during the past week. Giltedge has been dull. Indian Loans declined on Thursday. Home funds were steadier. The dullness in its section is attributed to a rise in prices and also to the extensive conversion operations like those of the London County Council, Bristol, Mersey, The Dock Board, etc., The Decline has specially affected 2½ per cent. consols. There was a flurry in the Foreign Exchanges caused by a report that the American Supreme Court was about to give a decision on the Gold Clause. Dollars came in for demand and shipments of gold to America were suspended. On the announcement that decision was postponed dollars were offered and sterling appreciated against dollars. In the Foreign Bond Market Brazilian issues were freely sold. Among other sections Oils declined but recovered to some extent on Thursday. Teas were in favour during the early part of the week. Among Home Rails Great Western advanced owing to report of greater traffic receipts. Rubbers were irregular and other industrials failed to attract much business, many issues being quoted lower.

NEW YORK STOCK EXCHANGE

The Market ruled quiet throughout the week and is likely to continue dull till the decision of the Gold Clause cases by Supreme Court of America. Business indices are no doubt encouraging and select scrips like American Waterworks 3 per cent. preferred, National Distillers, Bendix Aviation, Sperry Corporation, Chase Bank, American Radiator and Union Carbide and Carbon are attractive at current levels. Fresh commitments, however, are preferable after the 4th Fbruary.

	1,27,500	0	0
Carry forward ...	80,155	5	0

In the last Directors' Report it was recorded that two new Babcock and Wilcox Boilers were to be installed to take the place of four Multilubular Boilers. The Boilers have been installed and are now working with satisfactory results.

The Directors have had under consideration a scheme for extensions to the Factory milling plant, designed to improve efficiency of operation and estimates have been called for.

The Government of India has imposed an Excise Duty of Re. 1-5 per cwt. on Indian Factory made sugar as from the first April, 1934, and the Sugar Cane Act, 1934, has come into operation, which prescribes regulations for governing the conditions under which Sugar Cane is to be purchased by sugar manufacturers.

There were no stocks of sugar as at 31st October, 1934.

A. B. Shakespear, T. M. Macdonald, T. H. L. Macdonald, A. B. Hailey—Directors.

INDIA PAPER PULP CO., LD.

Report of the Directors for the half-year ended 30th September, 1934.

The directors beg to submit the audited accounts for the half-year ended 30th September, 1934.

The trading account shows a profit of Rs. 2,31,246-8-11 and after charging Rs. 1,28,275-7-3 for depreciation and making sundry adjustments a sum of Rs. 2,12,975-3-2 remains at the credit of the Profit and Loss account, from which the Directors recommend:—

	Rs.	A.	P.
A dividend of Rs. 2 per share	60,000	0	0
To be added to Reserve	1,00,000	0	0
To be carrie forward	52,975	3	2
Total ...	2,12,975	3	2

Expenditure on the extension of the Company's Bamboo Pulp plant up to 30th September amounted to Rs. 7,13,373-7-10. Erection of the greater part was finished during the half-year with the exception of the linings of the New Digesters. These have since been completed and have recently been put into operation.

Trading conditions during the half-year showed little change as compared with the previous period but a small improvement in production has resulted in a slight increase in the profit.

O. M. Jatia, C. C. Biswas, J. H. S. Richarson, A. Aikman, Directors.

Messrs. Andrew Yule & Co.—Managing Agents.
